Study & Evaluation Scheme

Study Summary

Name of the Faculty	Faculty of Computer Science and Engineering
Name of the School	Quantum School of Technology
Name of the Department	Department of Computer Science & Engineering
Program Name	Bachelor of Technology in Computer Science & Engineering
Duration	4 Years
Medium	English

Evaluation Scheme

Evaluation Scheme										
Type of Papers	Internal Evaluation	End Semester Evaluation	Total (%)							
	(%)	(%)	(70)							
Theory	40	60	100							
Practical/ Dissertations/Project	40	60	100							
Report/ Viva-Voce										
Internal Evaluati	on Components	(Theory Papers)								
Mid Sem Exam		60 Marks								
Assignment-I		30 Marks								
Assignment-II		30 Marks								
Attendance		30 Marks								
Internal Evaluatio	n Components ((Practical Papers)								
Quiz One		30 Marks								
Quiz Two		30 Marks								
Quiz Three		30 Marks								
Lab Records/ Mini Project		30 Marks								
Attendance		30 Marks								
End Semester	Evaluation (Pra	actical Papers)								
ESE Quiz		40 Marks	·							
Practical Performance		20 Marks								
Lab Record		20 Marks								
Viva- Voce		20 Marks								

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Students have to Attempt all questions. All questions carry 20 marks each. Parts a) and b) of question Q1 to Q5 will be compulsory and each part carries 2 marks. Parts c), d) and e) of Q1 to Q5 Carry 8 marks each and the student may attempt any 2 parts.

Important Note:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Outcomes (POs). A question paper must assess the following aspects of learning as planned for a specific course i.e Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure - Bachelor of Technology in Computer Science & Engineering

Introduction

Bachelor of Technology in Computer Science & Engineering (CSE) is an academic programme that integrates the field of Computer Engineering and Computer Science. It is one of the most sought after courses amongst engineering students. The course contains a plethora of topics but emphasizes the basics of computer programming and networking. The topics covered in the course are computation, algorithms, programming languages, program design, computer software, computer hardware, and others. Computer science engineers are involved in many aspects of computing, from the design of individual microprocessors, personal computers, and supercomputers to circuit designing and writing software that powers

Many technical institutes in India and abroad offer UG (Undergraduate) and PG (Postgraduate) level courses in Computer Science Engineering. Students can do BTech and MTech in Computer Science Engineering from these institutes. Students pursuing these courses get to learn about the design, implementation, and management of information systems of computer hardware and software.

Career Scope of Computer Science Engineering

Bachelor of Technology in Computer Science & Engineering is one of the engineering specialisations. However, candidates pursuing this programme have the option of further choosing amongst various other specializations like telecommunication, web designing, computer hardware and software implementation and maintenance, etc.

These professionals can work as a data scientist, computer programmer, systems analyst, hardware engineer, software developer, system engineer, IT consultant, system designer, networking engineer, web developer, database administrator, mobility tester, programmer, e-commerce specialist, and software tester.

Computer Science Engineering: Eligibility Criteria

Find below the basic eligibility requirement to pursue a Computer Science Engineering programme at the UG and PG level:

- Eligibility requirements for Bachelor of Technology in Computer Science & Engineering: Aspirants should have passed the Class 12 exam from a recognized board with Physics, Chemistry, and Mathematics as core subjects. Besides this candidates should also have secured minimum aggregate marks of 60% in the above subjects combined.
- Eligibility requirements for Master of Technology in Computer Science & Engineering: Aspirants must have completed a BTech degree in the same specialization with a passing percentage.

B. Choice Based Credit System (CBCS)

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the B.Tech. Computer Science & Engineering program:

Core competency: Students will acquire core competency in Computer Science & Engineering and in allied subject areas.

Program/Discipline Specific Elective Course (DSEC):

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic & advance knowledge and concepts of Computer Science & Engineering.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a graduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A graduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skills will definitely develop acumen to perform well during the recruitment process of any premier organization and will have the desired confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world. There shall be four courses of Aptitude in Semester I, II, III & IV semesters and two courses of Soft Skills in III & IV Semesters and will carry no credit, however, it will be compulsory for every student to pass these courses with minimum

45% marks to be eligible for the certificate. These marks will not be included in the calculation of CGPI. Students have to specifically be registered in the specific course of the respective semesters.

Skill Enhancement Course: This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Generic/Open Elective Course (OEC): Open Elective is an interdisciplinary additional subject that is compulsory in a program. The score of Open Elective is counted in the overall aggregate marks under Choice Based Credit System (CBCS). Each Open Elective paper will be of 3 Credits in III, IV and VI semesters. Each student has to take Open/Generic Electives from department other than the parent department. Core / Discipline Specific Electives will not be offered as Open Electives.

Mandatory Course (MC): This is a compulsory course but audit that does not have any choice and will be of 3 credits. Each student of B. Tech. Program has to compulsorily pass the Environmental Studies and Human values.

C. Program Outcomes of Bachelor of Technology in Computer Science & Engineering

PO-01	Engineering knowledge	Apply the knowledge of mathematical, scientific and engineering fundamentals in formulating and solving engineering problems.		
PO-02	Problem analysis	Identify, analyze and provide substantial conclusions for complex engineering problems using mathematics, natural sciences, and engineering sciences		
PO-03	Design/development of solutions	Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations		
PO-04	Conduct investigations of complex problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data and synthesis of the information to provide valid conclusions.		
PO-05	Modern tool usage	Apply modern tools and techniques for prediction and modelling of complex engineering activities with an understanding of the limitations.		
PO-06	The engineer and society	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice		
PO-07	Environment and sustainability Understand the impact of the professional engineering solution and environmental contexts, and demonstrate the knowledge of sustainable development			
PO-08	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice		
PO-09	Individual and team work	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.		
PO-10	Communication	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.		
PO-11	Project management and finance	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.		
PO-12	Life-long learning	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change		

D. Program Specific Outcomes:

PSO1: Foundation of Computer System: Ability to understand the principles and working of computer systems. Students can assess the hardware and software aspects of computer systems.

PSO2: - Foundations of Software development: Ability to understand the structure and development methodologies of software systems. Possess professional skills and knowledge of software design process. Familiarity and practical competence with a broad range of programming language and open source platforms.

PSO3: Foundation of mathematical concepts: Ability to apply mathematical methodologies to solve computation task, model real world problem using appropriate data structure and suitable diagram.

PSO4: Applications of Computing and Research Ability: Ability to use knowledge in various domains to identify research gaps and hence to provide solution to new ideas and innovations.

E. Program Educational Objectives (PEO's)

PEO1. To be well familiar with the concepts of Computer Engineering for leading a successful career in industry or as entrepreneur or to pursue higher education.

PEO2. To develop techno-commercial skills for providing effective solutions to complex problems using domain knowledge of Computer Engineering.

PEO3. To instill lifelong learning approach towards constantly evolving technologies with innovative and ethical mindset.

F. Pedagogy & Unique practices adopted:

"Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" online or face-to-face. They alter the power ratios in teaching and learning relationships between students and educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video Based Learning (VBL) & Learning through Movies (LTM): These days technology has taken a front seat and classrooms are well equipped with equipment and gadgets. Video-based learning has become an indispensable part of learning. Similarly, students can learn various concepts through movies. In fact, many teachers give examples from movies during their discourses. Making students learn few important theoretical concepts through VBL & LTM is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL & LTM, wherever possible.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

Industrial Visits: Industrial visit are essential to give students hand-on exposure and experience of how things and processes work in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for a report of such a visit relating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) Marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners.

Induction program: Every year 3 weeks induction program is organized for 1st year students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: organizing & participation in extracurricular activities will be mandatory to help students develop confidence & face audience boldly. It brings out their leadership qualities along with planning & organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning(A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning(A2 Assignment), workshops, Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

Detailed Syllabus (Semester wise /course wise)

SEMESTER 1

MA3102	Title: Mathematics I	LTPC						
		3 2 0 4						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	To provide essential knowledge of basic tools of Differential							
	Calculus, Integral Calculus, Vector Calculus and Matrix Algebra.							
Expected Outcome	Students will be able to solve applied problems using differentiation and							
	integration and will be able to demonstrate Matrix facility.							
Unit No.	Unit Title	No. of hours (per						
		Unit)						
Unit I	Matrix Algebra	8						
	eir use in getting the Rank, Inverse of a matrix and solution of linear simu							
	rs of a matrix, Symmetric, Skew-symmetric, Hermitian, Skew-Hermitian,							
	ces and their properties, Cayley- Hamilton theorem, Diagonalization of a	matrix.						
Unit II	Differential Calculus	8						
	tiability of functions of two variables, Euler's theorem for homogeneous							
	e, Jacobians, Taylor's Theorem for two variables, Error approximations.	Extrema of						
functions of two or more varia	ables, Lagrange's method of undetermined multipliers							
Unit III	Integral Calculus	6						
Review of curve tracing and o	uadric surfaces, Double and Triple integrals, Change of order of integrati	ion. Change of						
variables.								
	Application of Multiple Integration	6						
Gamma and Beta functions. D	Dirichlet's integral. Applications of Multiple integrals such as surface area	, volumes, centre						
of gravity and moment of iner	tia.							
Unit V	Vector Calculus	8						
Differentiation of vectors, gra	dient, divergence, curl and their physical meaning. Identities involving gr	adient,						
divergence and curl. Line and	surface integrals. Green's, Gauss and Stroke's theorem and their applica	tions.						
Text Books	1. R.K. Jain and S.R.K. Iyenger, Advanced Engineering Mathematics, 1	Narosa Publishing						
	House	-

Course Outcome for MA3102

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Emt)/ None (Use, for more than One)
CO1	Students should be able to Learn the basic principles of multi-variable calculus with their proofs. They should be able to classify partial differential equations and transform them into canonical form. They will also understand how to extract information from partial derivative models in order to interpret reality.		Emp
CO2	Students should be able to Understand and learn how to find the area and volume of any region and solid body respectively by integral and also find the moments of inertia for a thin plate in plane.		Emp
CO3	Students should be able to Understand theorems related to directional derivative of gradient and reproduce its proof. They should be able to Explain the concept of a vector integration in a plane and in space.		S
CO4	Know basic application problems described by second order linear differential equations with constant coefficients. They should be also able to understand and solve the applications associated with Laplace Transform.		S
CO5	Students should be able to Solve the linear equations using matrix properties and Determine characteristic equation, eigen values, eigenvectors and diagonalizable of a matrix.		Emp

PH3140	Title: Engineering Physics Lab	LTPC 0021
		0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and fabricate engineering and technical equipments.	
Expected Outcome	On Completion of this course, students are able to – Develop skills to impart practical knowledge in real time solution. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.	
· · · · · · · · · · · · · · · · · · ·	List of Experiments	

- To determine the wavelength of monochromatic light by Newton's ring.
- 3.
 4.
 6.
 7. To determine the wavelength of monochromatic light with the help of Fresnel's biprism.
- To determine the focal length of two lenses by nodal slide and locate the position of cardinal points.
- To determine the specific rotation of cane sugar solution using half shade polarimeter.
- To determine the wavelength of spectral lines using plane transmission grating.
- To determine the specific resistance of the material of given wire using Carey Foster's bridge.
- To determine the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of the coil.
- To verify Stefan's Law by electrical method.
- To calibrate the given ammeter and voltmeter.
- 10. To study the Hall effects and determine Hall coefficient, carnier density and mobility of a given semiconductor material using Hall-effect set up.
- 11. To determine energy bank gap of a given semiconductor material.
- 12. To determine E.C.E. of copper using Tangent or Helmholtz galvanometer.
- 13. To draw hysteresis curve of a given sample of ferromagnetic material and from this to determine magnetic susceptibility and permeability of the given specimen.
- 14. To determine the balistic constant of a ballistic galvanometer.
- 15. To determine the viscosity of a liquid.

CS3140	Title: Basics of Computer and C Programming Lab	LTPC
		0021
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Learning objectives is to improve confidence in technology use and increased awareness of opportunities afforded to individuals with computer application skills.	
Expected Outcome	Recognize basic computer hardware architecture constructs such as instructions sets, memory, CPU, external devices, and data Representation	
	List of Experiments	

- Programs using I/O statements and expressions.
- Programs using decision-making constructs.
- 2. 3. Write a program to find whether the given year is leap year or Not? (Hint: not every centurion year is a leap. For example 1700, 1800 and 1900 is not a leap year)
- Design a calculator to perform the operations, namely, addition, subtraction, multiplication, division and square of a number.
- Check whether a given number is Armstrong number or not?
- 6. Populate an array with height of persons and find how many persons are above the average height.
- Populate a two dimensional array with height and weight of persons and compute the Body Mass Index of the individuals.
- Given a string a\$bcd./fgl find its reverse without changing the position of special characters. (Example input: a@gh%;j and output: j@hg%;a)
- Convert the given decimal number into binary, octal and hexadecimal numbers using user defined functions.
- 10. From a given paragraph perform the following using built-in functions:
- Find the total number of words.
- b. Capitalize the first word of each sentence.
- Replace a given word with another word.
- 11. Solve towers of Hanoi using recursion.
- 12. Sort the list of numbers using pass by reference.
- 13. Generate salary slip of employees using structures and pointers.
- 14. Compute internal marks of students for five different subjects using structures and functions.
- 15. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using random access file.

CY3205	Title: Environmental Studies	LTPC
		2002
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Creating awareness among engineering students about the importance of environment, the effect of technology on the environment and ecological balance is the prime aim of the course.	
Expected Outcome	Students will understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction to Environmental studies and Ecosystems	5

Multidisciplinary nature of environmental studies, Scope and importance, Need for public awareness. Concept, Structure and function of an ecosystem, Energy flow in an ecosystem: food chains, food webs and ecological pyramids. Examples of various ecosystems such as: Forest, Grassland, Desert, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit II Natural Resources: Renewable and Non- renewable resources 5

Land as a resource, land degradation, landslides (natural and man-induced), soil erosion and desertification. Forests and forest resources: Use and over-exploitation, deforestation. Impacts of deforestation, mining, dam building on environment and forests. Resettlement and rehabilitation of project affected persons; problems and concerns with examples. Water resources: Use and over-exploitation of surface and ground water, floods, drought, conflicts over water (international and inter-state).

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems with examples. Energy resources: Renewable and non renewable energy sources, use of alternate energy sources, growing energy needs.

Unit III Biodiversity and Conservation

5

Levels of biological diversity: genetic, species and ecosystem diversity. Biogeographic zones of India. Ecosystem and biodiversity services. Biodiversity patterns and global biodiversity hot spots, India as a mega-biodiversity nation; Endangered and endemic species of India. Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit IV Environmental Pollution

4

Environmental pollution and its types. Causes, effects and control measures of :a) Air pollution b) Water pollution – freshwater and marine c) Soil pollution d) Noise pollution e) Thermal pollution

Nuclear hazards and human health risks, Solid waste management: Control measures of urban and industrial waste.

Unit V Environmental Policies and Practices

Concept of sustainability and sustainable development. Water conservation and watershed management. Climate change, global warming, acid rain, ozone layer depletion. Disaster management: floods, earthquake, cyclones and landslides.

Wasteland reclamation. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation. Environment: rights and duties. Population growth.

Field work

Visit to a local polluted site-Urban/Rural/Industrial/Agricultural

Study of simple ecosystems-pond, river, hill slopes, etc.

CS3242	Title: Advance C Programming Lab	L TP C				
		0 02 1				
Version No.	1.0					
Course Prerequisites	Nil					
Objectives	Objectives Study of basic programming principles introduced in Programming Fundamentals. Advanced concepts of program design, implementation and testing.					
Expected Outcome Know concepts in problem solving, to do programming in C language. To write diversified solutions using C language						
List of Experiments						

- 1. WAP accessing function definition with the help of pointer.
- 2. WAP accessing 2-D Array with the help of pointer.
- 3. WAP declaring an array taking length from the user.
- 4. WAP declaring 2-D array by using Dynamic memory allocation technique.
- 5. WAP passing arguments to main function.
- 6. WAP making function accepting VAR_ARGS.
- 7. Practice of UNIX Programming Environment. (Complete command line environment for C Programming in GCC.)
- 8. Making of Header File and Library Object code.
- 9. Practice of System Calls / System APIs (Any 10 APIs).

Mode of Evaluation	Internal and External Examinations
Recommendation by Board of Studies on	11-07-2020
Date of approval by the Academic Council	13-09-2020

Unit-wise Course Outcome	Descriptions	RI Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use , for more than One)
CO1	Apply advanced concepts of the C programming language to create advanced C applications.	2	Em
CO2	 Understand Function and Double Pointers, Recursion, Bit Manipulation, Macros. 	2	S
	 Write high quality C code, to make yourself more marketable for higher level programming positions and be apply for real-time/embedded programming positions. 		S

CS3301	Title: Data Structure & Programming	L	T	_	- T				
		4	0	0	4				
Version No.	1.0								
Course Prerequisites	Nil								
Objective	The course aims to introduce the concept of arrays, relinked list, trees and graph data structures.	ecursi	ion, s	stack	queue,				
	On completion of subject the students will be able to	app	ly the	e cor	cept				
E	of arrays, structures pointers and recursion, The								
Expected Outcome	queue and linked list concepts, Trees, representa	tion	of t	rees,	tree				
	traversal and basic								
	operations on trees to any algorithm.								
Unit No.	Unit Title		of r Un	ho it)	ours				
Unit I	Introduction To Data Structures	10							
	e definitions - Data types in C - Pointers in C -Data stru	cture	s and	l C -	Arravs ii				
	l array -Implementing one dimensional array - Array								
	mplementing structures - Unions in C - Implementation								
	scope of variables. Recursive definition and process								
Fibonacci sequence - Recursion in C - E	efficiency of recursion.								
Unit II	Stack, Queue And Linked List	10							
Stack definition and examples - Primit	ive operations – Example - Representing stacks in C -	Pusl	n and	l pop	operation				
implementation. Implementation of que	ues - Insert operation - Priority queue - Array impleme	entati	on o	fprio	rity queu				
Inserting and removing nodes from a list-linked implementation of stack, queue and priority queue									
Unit III	Trees	10							
	- Applications of binary trees - Binary tree representati								
	entation of binary tree – Binary tree traversal in C								
	ding the Kth element - Deleting an element. Trees a	ind th	neir	appli	cations:				
*	- Evaluating an expression tree - Constructing a tree.								
Unit IV	Sorting And Searching	9							
	cy considerations, Notations, Efficiency of sorting. Exc								
	ee sort; Heap sort. Heap as a priority queue - Sor								
	e insertion - Shell sort - Address calculation sort -	Merg	ge so	rt -F	Radix so				
•	earch - Binary search - Interpolation search.								
Unit V	Graphs	9		.1	1 1.1				
	of graphs - Transitive closure - Warshall's algorithm -			oath a	algorithm				
Linked representation of graphs - Dijkst	ra's algorithm - Graph traversal - Traversal methods for	grap	hs.

Version No.	1.0						
Course Prerequisites	Nil						
Objectives	The course is designed to develop skills to design and analyze simple linear and nonlinear data structures. It strengthens the ability to the students to identify and apply the suitable data structure for the given real-world problem. It enables them to gain knowledge in practical applications of data structures.						
Expected Outcome	Have a good knowledge of heap, search tree data structures. Apply for solving other problems. Have a understanding of various techniques 4. Design algorithms for new problems using these tech level understanding and exposure to advanced topics in data structures able to implement the studied data structures and algority programming language	us algorithm design iniques. Have a high- cturesand algorithms.					
List of Experiments							

- 1. Write a C++ program to implement the following using an array a) Stack ADT b) Queue ADT.
- 2. Write a C++ program to implement the following using a singly linked list a. Stack ADT b. Queue ADT.
- 3. Write C++ Program to implement the DEQUE (double ended queue) ADT using arrays.
- 4. Write a C++ program to perform the following operations: a) Insert an element into a binary search tree. b) Delete an element from a binary search tree. c) Search for a key element in a binary search tree.
- 5. Write a C++ program that use recursive functions to traverse the given binary tree in a) Preorder b) Inorder and c) Postorder.
- 6. Write a C++ program that use non –recursive functions to traverse the given binary tree in a) Preorder b) Inorder and c) Postorder
- 7. Write C++ programs for the implementation of BFS and DFS for a given graph.
- 8. Write C++ programs for implementing the following sorting methods: a) Merge Sort b) Heap Sort.
- 9. Write a C++ program to perform the following operations. a) Insertion into a B-tree b) Deletion from a B-tree.
- 10. Write a C++ program to perform the following operations. a) Insertion into a AVL-tree b) Deletion from a AVL-tree.
- 11. Write a C++ Program to implement all the functions of Dictionary (ADT) using hashing

EC3341	Title: Digital Electronics Lab	L	ΤP	С
		0	0 2	1

Version No.	1.0					
Course	Nil					
Prerequisites						
Objectives	To acquire the basic knowledge of digital logic levels and application of knowledge tounderstand digital electronics circuits &To prepare students to perform the analysis and design of various digital electronic circuits.					
Expected Outcome	Students will be able to contrast and compare digital representation of information with the analog representationAble toz explain fundamental concepts of the decimal number system. Represent number systems will be able to count, convert among, and do arithmetic in the binary, hexadecimal and octal number systems. 2's complement form, and vice versa, represent data in codes and interpret those codes. able to explain the basic logic operations of NOT, AND, OR, NAND, NOR, and XOR, able to interpret logic functions, circuits, truth tables, and Boolean algebra expressions.					
List of Experiments						

- 1. Implementation of the given Boolean function using logic gates in both sop and pos forms.
- 2. Verification of state tables of RS, JK, T and D flip-flops using NAND & nor gates.
- 3. Implementation and verification of decoder/de-multiplexer and encoder using logic gates.
- 4. Implementation of 4x1 multiplexer using logic gates.
- 5. Implementation of 4-bit parallel adder using 7483 IC.
- Design and verify the 4-bit synchronous counter. 6.
- 7. Design and verify the 4-bit asynchronous counter.
- 8. To design and verify operation of half adder and full adder.
- 9. To design and verify operation of half Subtractor. 1
- 10. To design & verify the operation of magnitude comparator.
- 11. To study and verify NAND as a universal gate.

Mode of Evaluation	Internal and External Examinations
Recommendation by Board of Studies On	11-07-2020
Date of approval by the Academic Council	13-09-2020

Unit-wise Course Outcome	Descriptions	BL Le vel	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Realize truth tables of different logic gates like OR,AND,NOT AND XOR. They will also learn Functions using universal gates.	2	Emp
CO2	Students should be able to Design and implement combinational circuits like half adder/full adder, half subtractor/full subtractor, code converters, comparators, MUX/DEMUX	2	S
CO3	Students should be able to Design and implement sequential circuits like flip-flops, counters and shift registers	2	Етр

CS3342	Title: Oracle/SQL Server Lab	L TPC					
		0 0 2 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	The major objective of this lab is to provide a strong formal foundation in database concepts, technology and practice to the participants to groom them into well-informed database application developers						
Expected Outcome	Understand, appreciate and effectively explain the underlying concepts of database technologies . Design and implement a database schema for a given problem-domain Normalize a database, Populate and query a database using SQL DML/DDL commands. Declare and enforce integrity constraints on a database using a state-of-the-art RDBMS Programming PL/SQL including stored procedures, stored functions, cursors, packages.						

List of Experiments

- 1. Installation of Oracle (min 11g version) of the Computer and description of SQL, Data Types, Constraints, DDL, DML, DCL, DQL
- 2. Create two tables (Employee and Department) in the database using SQL commands.
- 3. Insertion of Data into DB using SQL commands
- 4. Selection of Data from the DB using SQL
- 5. Manipulation or modification and Alteration of Data using SQL commands
- 6. Write SQL Commands to describe the foreign key, primary key concept.
- 7. Write SQL Commands to Join two table describe above such as natural join, Equi join, left outer join, right outer join and Cartesian product as well as differentiation between Natural join and Cartesian Product
- 8. Write a programme into PL/SQL to create, insert, update and delete the data into/from DB
- 9. How to declare and create Procedures and Cursors into PL/SQL through couple of examples
- 10. How to declare and create the triggers into SQL-PL/SQL with an example

CS3343	Title: Linux and Open Source Lab	LTPC					
		0 0 2 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and use linux and implement open-source software.						
Expected Outcome	On Completion of this course, students are able to – Develop skills to impart practical knowledge in real time solution. Understand principle, concept, working and application of new technology and comparison of different application						

List of Experiments

- 1. Installation of Linux.
- 2. Installation of Open-source Software.
- 3. Executing shell level basic commands.
- 4. Create Files and apply permission on it.
- 5. Create Files and perform basic operation with the help of Vi- editor.
- 6. Write a shell script to calculate the cube of any number entered by the user
- 7. Write a shell script to display a menu driven facility for displaying a directory, to create a file, to display the logged in users and to terminate a program. Use case... esac

CS3344	Title: Python Programming Lab	L TP C 0 02 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Basics of Python programming. Decision Making and Functions in Programming using Python. Searching Algorithms in python.	Python. ObjectOriented
Expected Outcome	Describe the Numbers, Math functions, Strings, List, Tuples and Diction different Decision Making statements and Functions. Interpret Object Python	

List of Experiments

- 1) Write a Python program to find GCD of two numbers.
- 2) Write a Python Program to find the square root of a number by Newton's Method.
- 3) Write a Python program to find the exponentiation of a number.
- 4) Write a Python Program to find the maximum from a list of numbers.
- 5) Write a Python Program to perform Linear Search. 6)Write a

Python Program to perform Binary Search

- 7) Write a Python Program to perform selection sort.
- 8) Write a Python Program to perform insertion sort.
- 9) Write a Python Program to perform Merge sort.
- 10) Write a Python program to find first n prime numbers.

e										
Prere										
quisit										
es										
Objectives	This course is introduced to understand the basic concepts of Java, Class syntax, data types, flow of									
Expected Outcome The student is expected to have hands on experience with Basics of Java programming, multithreaded programs and Exception handling, The skills to apply OOP in Java programming in problem solving, Use of GUI components (Console and GUI based)										
	List of Experiments									

- 1. Use Eclipse or Net bean platform and acquaint with the various menus. Create a test project, add a test class, and run it. See how you can use auto suggestions, auto fill. Try code formatter and code refactoring like renaming variables, methods, and classes. Try debug step by step with a small program of about 10 to 15 lines which contains at least one if else condition and a for loop.
- To write a program in JAVA to implement the concept of Call by Address and Call by Value. 2.
- 3. To write a program in JAVA to prepare a student Record using classes and object.
- 4. Write a program to implement array using JAVA.
- 5. Write a JAVA Program to define a class, describe its constructor, overload the Constructors and instantiate its object.
- Write a Java Program to define a class, define instance methods for setting and retrieving values of instance 6. variables and instantiate its object.
- 7. Write a program to implement polymorphism using methods in JAVA.
- 8. Write a Java Program to implement inheritance and demonstrate use of method overriding using methods in JAVA.
- 9. Write a Java Program to implement multilevel inheritance by applying various access controls to its data members and methods.
- 10. Write a program to implement packages and interface in JAVA.
- 11. Write a JAVA program to practice using String class and its methods.
- 12. Write a JAVA Program to implement Wrapper classes and their
- 13. Write a program to implement the concept of threading by extending Thread Class
- Write a program to implement the concept of threading by implementing Runnable Interface. 14.

CS3442	Title: Computer Network Lab	L 0	T P 0 2	C 1						
Version No.	1.0	U	0 2	1						
Course	Nil									
Prerequisites										
Objectives	Lab provides a practical approach to Ethernet/Internet networking: ne experiments are made to understand the layered architecture and protocols work.									
Expected Outcome	Understand the structure and organization of computer networks; including the division intonetwork layers, role of each layer, and relationships between the layers. Understand the basicconcepts of application layer protocol design; including client/server models, peer to peer models, and network naming.									
	List of Experiments									
1. Study of dif	ferent – 2 Network Cables and Network Interfaces.									
2. Study & Im	plementation of IP Addressing & Sub Netting Concept.									
3. Study & Im	plementation of Basic Network Commands and Network Configuration	Comr	nands.							
4. Installation	of Network Simulator (NS2).									
5. Installation	of Packet Tracer Tool.									
6. Configure a	Network Topology with Packet Tracer Tool.									
7. Simulate a s	small Network using Network Simulator (NS2) Tool.									
8. Write a prog	gram to simulate Bit-Stuffing Data Framing Techniques.									
9. Write a prog	gram to simulate Char-Stuffing Data Framing Techniques.									
10. Write a prog	gram to simulate Hamming Code (7-Bit) Error Control Technique.									
Mode of Internal and External Examinations Evaluation										
Recommendation	11-07-2020									
Date of approval by the Academic Council	13-09-2020									

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Learn about basics of computer networking and IP addressing.	2	Emp
CO2	Students should be able to Analyse different simulation tools such as NS2	2	Emp
CO3	Students should be able to Learn about framing technique	2	Emp

CS3443	Title: Supervised Learning Lab	LTPC					
		002 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives Make use of Data sets in implementing the machine learning algorithms. Implement t							
S SJOCET CS	machine learning concepts and algorithms in any suitable language of	choice.					
	At the end of the course, the student will be able to;						
	1. Understand the implementation procedures for the machine learning algorithms.						
Expected Outcome	2. Design python programs for various learning algorithms.						
	3. Apply appropriate data sets to the machine learning algorithms.						
	4. Identify and apply machine learning algorithms to solve real world problems						
List of Experiments							

- 1. Write a program to demonstrate the working of the decision tree based ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample.
- 2. Build an Artificial Neural Network by implementing the Back propagation algorithm and test the same using appropriate data sets.
- 3. Write a program to implement the naïve Bayesian classifier for a sample training data set stored as a .CSV file. Compute the accuracy of the classifier, considering few test data sets.
- 4. Write a program to implement k-Nearest Neighbour algorithm to classify the iris data set. Print both correct and wrong predictions. Python ML library classes can be used for this problem.
- 5. Implement Regression algorithm with appropriate training and testing datasets.
- 6. Write a program to demonstrate the working of the Support Vector Machine algorithm for classification using suitable training and testing datasets.
- 7. Write a program to demonstrate the working of the Random Forest algorithm for classification using suitable training and testing datasets.
- 8. Write a program to demonstrate the working of the Random Tree algorithm for classification using suitable training and testing datasets.

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Students should be able to Analyze the asymptotic performance of algorithms, Apply important algorithmic design paradigms and methods of analysis, Familiarizing students with specific algorithms for a number of important computational problems like sorting, searching.	2	Emp
CO2	Students should be able to Describe the divide-and-conquer paradigm and explain when an algorithmic design situation calls for it and differentiate with Greedy approach. Recite algorithms that employ this paradigm. Synthesize divide and-conquer algorithms. Derive and solve recurrences describing the performance of divide-and-conquer algorithms.	2	Ent
CO3	Students should be able to Incorporate the dynamic-programming paradigm and explain when an algorithmic design situation calls for it. Recite algorithms that employ this paradigm. Synthesize dynamic programming algorithms, and analyses them.	2	S
CO4	Students should be able to Explain the major graph algorithms and their analyses. Employ graphs to model engineering problems, when appropriate. Synthesize new graph algorithms and algorithms that employ graph computations as key components, and analyses them.	3	Emp
CO5	Students should be able to He provide understanding of classes of problems and define the class of problem as P, NP, NP Hard, NP Complete.	3	Emp

CS3540	Title: Web Technology Lab	LTPC 0021					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	Be able to put into use the advanced feature	Deepen your knowledge of advanced features of the Java language syntax and SDK. Be able to put into use the advanced features of the Java language to build and compile robust enterprise-grade applications.					
Expected Outcome	Students will design and implement programs in the Java programming language that make strong use of classes and objects.						
List of Experiments							

- 1. Installation and configuration of Apache server
- 2. Development of static website of an online Departmental Store. The website should be user friendly and should have the following pages:
- Home page
- Registration and user login
- User profile page
- Items catalog
- Shopping cart
- Payment by credit card
- Order confirmation
- 3. Add validations to the above site for registration, user login, user profile and payment by credit card using Java Script.
- 4. Develop the Password Validations form using Java Script.
- 5. Design the Static Web Site or pages using HTML and DHTML for Quantum University.
- 6. Design the Dynamic Web Site or pages using XML, Java Script and Servlet for Quantum University.
- 7. Installation and configuration of TOMCAT web server. Convert the static web pages of into dynamic web pages using servlets and cookies.
- 8. Creation of a XML document of 20 students of Quantum University. Add their roll numbers, marks obtained in 5 subjects, total and percentage and save this XML document at the server. Write a program that takes students' roll number as an input and returns the student's marks, total and percentage by taking the students' information from the XML document.
- 9. Design a website using existing web services (Google map, weather forecast, market information etc.) using AJAX. Design a web form for online Registration and stored as well as retrieved the data to/from the database.

Prerequisit							
es							
Objectives	The goal in such unsupervised learning problems may be to discover groups of similar examples within the data, where it is called clustering, or to determine how the data is distributed in the space.						
Expected Outcome	On completion of subject the students will be able to preprocess the data that means compressing it in some meaning-preserving way like with PCA or SVD before feeding it to						
	a deep neural net or another supervised learning algorithm.						
	List of Experiments						

- 1. PCA on MNIST Dataset & Using sklearn.
- 2. PCA on Cat and Dog Dataset. LDA on Cat and Dog Dataset
- 3. Implementation of DBScan using Mall_Customer Dataset and Implementation of SVD
- 4. Different Types of Feature Selection (Forward/ Backward)
- 5. Implementing K-means clustering on Iris Dataset
- 6. Implementing Hierarchical clustering to AirlinesCluster dataset on Kaggle
- 7. Building Convolutional Neural Networks from Scratch
- 8. Classify Images Using Convolutional Neural Networks and Python
- 9. Create image dataset using data augmentation using keras and optimize.
- 10. Develop a convolutional neural network for handwritten digit classification (MNIST Dataset)

		3	0	0	3					
Version No.	1.0									
Course Prerequisites	Nil									
Objective	The objective of such artificial neural networks is to perform functions as problem solving and machine learning.	n suc	h co	gni	tive					
Expected Outcome	 The student should be able to describe Artificial Neural Networks, Recurrent Neural Networks and their need. They will be able to distinguish ANN and deep learning types: Supervised, unsupervised and reinforcement. They will also understand the concepts associated with gradient descent, RNN, predicting next character through RNN. The student should be able to understand Deep learning using Tensor flow, using examples involving case studies and Python coding The student should be able to develop analytical skills to improve machine learning results through the use of Boltzman machines. The student should be able to develop analytical skills to improve machine learning results through the use of Boltzman machines. The student should be able to develop analytical skills to improve machine learning through the use of modern statistical tools and associated models

Course	Nil						
Prerequisit							
es							
Objectives	The objective of such artificial neural networks is to perform asproblem solving and machine learning.	n such cognitive functions					
Expected Outcome	On completion of subject the students will be able to understand ANNs which have the abilityto learn and model non-linear and complex relationships, because many of therelationships between inputs and outputs are non-linear as well as complex.						
	List of Experiments						

- 1. Build a perceptron model in from scratch in python & Visualization of different activation function and their derivative in python
- 2. Hyperparameters tuning and optimization in tensorflow & Simulation of Jacknife estimation of mean and median
- 3. Hello world in tensorflow. Understanding different syntax and calling ops
- 4. Introduction to keras in tensorflow. Build linear regression/logistic regression in tensorflow
- 5. Next character prediction using RNN in tensorflow. And next character prediction using BiRNN in tensorflow
- 6. Word prediction using LSTM in tensorflow. Collaborative filtering using RBM in tensorflow
- 7. Kaggle faker news classification using LSTM & BiLSTM.
- 8. Stock price prediction & forecasting using stacked LSTM.
- 9. Classification model using DBN in tensorflow
- 10.A/B testing using Bayesian method in tensorflow

CS3641	Title: Compiler Design Lab	LTPC								
		0021								
Version No.	1.0									
Course Prerequisites	Nil									
Objectives	Explain the importance of compiler design. Design and impusing lex tools. Explain the top down and bottom-up parsing Identify the understanding languagepeculiarities by designing language. Explain that computing science theory can be used a	techniques using programming.								
Expected Outcome Understand the working of lex and yacc compiler for debugging of programs. Understand define the role of lexical analyzer, use of regular expression and transition diagra. Understand and use Context free grammar, and parse tree construction. Learn & use the tools and technologies used for designing a compiler. Develop program for solving paproblems. Learn how to write programs that execute faster.										
	List of Experiments									
1. Write a C progr	ram to identify whether a given line is a comment or not.									
2. Write a C progr	ram to recognize strings under 'a', 'a*b+', 'abb'.									
3. Write a C progr	ram to test whether a given identifier is valid or not.									
4. Write a C progr	ram to simulate lexical analyzer for validating operators.									
5. Write a C progr	ram for constructing of LL(1) parsing.									
6. Write a C progr	ram for constructing recursive descent parsing.									
7. Write a C progr	ram to implement LALR parsing									
8. Write a C progr	ram to implement operator precedence parsing.

CS3640	Title: Artificial Intelligence using Python Lab LTPC 0021						
Version No.	1.0						
Course	Nil						
Prerequ							
isites							
Objectives	Identify innovative research directions in Artificial Intelligence. Providing quality education and practical skills to the students and faculty.						
Expected Outcome	Recent advances in computational speed, data storage, data retrieval, sensorsand algorithms have combined to dramatically reduce the cost of machine learning-based predictions.						
	Link of Empirements						

- List of Experiments
- 1. Explain the basic list manipulating functions.
- 2. Define the different basic structure of a function in python.
- 3. Write a program in python to add two numbers.
- 4. Write a program in python to show the use of arithmetic operators.
- 5. Write a program in python to find the factorial of a positive integer.
- 6. Write a program in python to add the elements of a list. With or without inbuilt functions.
- 7. Write a program in python to concatenate two lists with or without inbuilt functions.
- 8. Write a program in python to find nth element of a list.
- 9. Write a program of BFS in python and search an element.
- 10. Write a program of A* search in python and search an element.
- 11. Write a python program which makes use of function to display all such numbers which are divisible by 7 but are not a multiple of 5, between 1000 & 2000.
- 12. Write a python program to check the elements is in the list or not by using linear search or binary search.

CSE-AIML Specialization

CS3622	Title: Agile Practices and Design Thinking	L 3	T 0	P 0	C 3					
Version No.	1.0									
Course	Nil									
Prerequisites										
Objective	Agile development is a nimble process that relies on close team collaboration to respond to market change rapidly. The goal is quickly and iterate with improvements, sometimes continuous thinking, the goal of the course is to define a solution that satisfies	to g sly	et to .Wit	ma h de	rket sign					
Expected Outcome	 The student should be able to get introduced to Designing and Product development methodologies including UX Design, marketing and presentation. The student should be able to understand the need of advanced Product Design and marketing as compared to earlier ones. The student should be able to understand Agile Practices, its development, manifesto, estimations and planning involving Scrum model. The student should be able to understanding Kanban and its principles. The student should be able to develop analytical skills on improving work flow through classes of service and meetings model. 									
Unit No.	Unit Title	No. of Hrs (Per Unit)								
Unit I	Introduction to Design and Product Development			5						
Introduction to Produ	Introduction to Product Management, Product Design and Requirement gathering, Product Design									
Challenges ,UX Design	n, Product Development Methodologies, Product Marketing and Pre	senta	ation

CS3645	Title: Natural Language Processing Lab	LTPC 0042				
Version No.	1.0					
Course Prerequisites	Nil					
Objectives		Identify innovative research directions in Artificial Intelligence. Providing quality education and practical skills to the students and faculty.				
Expected Outcome	Recent advances in computational speed, data storage, data retrieval, sensors, and algorithms have combined to dramatically reduce the cost of machine learning-based predictions.					

List of Experiments

- 1. Introduction to Word embeddings.
- 2. Implement BOW model
- 3. Implement TF/IDF
- 4. Find synonyms and antonyms of words "Technology", "Science", "Arts" from a given text / file / pdf using Word2Vec.
- 5. Introduction to topic modelling using CountVectorizer, svd, tf-idf
- 6. Convert a foreign language(say French or Spanish) to English using Machine translation)
- 7. Twitter sentiment analysis.
- 8. Explain Lemmatization, PoS tagging, Stemming and tokenization using an example.
- 9. Perform Sequence to Sequence dependency parsing on a dataset.
- 10.Perform speech to text conversion using pyaudio and google's speech recognition.
- 11. Create your own speech corpus (for your native speaking language) from scratch.
- 12.Introduction to Dynamic Memory Network
- 13. Build Speech Recognition using Deep Learning
- 14.Deep Learning for Dialogue Generation

CS3648	Title: Advanced Python Programming Lab LTPC 0042							
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	Identify innovative research directions in Artificial Intell education and practical skills to the students and faculty.	Identify innovative research directions in Artificial Intelligence. Providing quality education and practical skills to the students and faculty.						
Expected Outcome	Recent advances in computational speed, data storage, data retrieval, sensors, and algorithms have combined to dramatically reduce the cost of machine learning-based predictions.							
List of Experiments								

- 1. Numpy, Pandas, and matplotlib library basic implementation.
- 2. Write a NumPy program to save a given array to a text file and load it.
- 3. Write a NumPy program to create a 3x3x3 array filled with arbitrary values
- 4. Write a NumPy program to convert a given array into a list and then convert it into a list again.
- 5. Write a NumPy program to create a 10x10 matrix, in which the elements on the borders will be equal to 1, and inside 0.
- 6. Write a NumPy program to compute the x and y coordinates for points on a sine curve and plot the points using matplotlib
- 7. Write a Pandas program to get the powers of an array values element-wise. Note: First array elements raised to powers from second array

Sample data: {'X':[78,85,96,80,86], 'Y':[84,94,89,83,86],'Z':[86,97,96,72,83]}

Expected Output:

XYZ

0 78 84 86

1 85 94 97

2 96 89 96

3 80 83 72

4 86 86 83

8. Write a Pandas program to create and display a DataFrame from a specified dictionary data which has the index labels. Sample Python dictionary data and list labels:

exam_data = {'name': ['Anastasia', 'Dima', 'Katherine', 'James', 'Emily', 'Michael', 'Matthew', 'Laura', 'Kevin', 'Jonas'], 'score': [12.5, 9, 16.5, np.nan, 9, 20, 14.5, np.nan, 8, 19],

'attempts': [1, 3, 2, 3, 2, 3, 1, 1, 2, 1],

'qualify': ['yes', 'no', 'yes', 'no', 'no', 'yes', 'yes', 'no', 'no', 'yes']}

labels = ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j'] Expected Output:

attempts name qualify score a 1 Anastasia yes 12.5

b 3 Dima no 9.0

.... i 2 Kevin no 8.0

j 1 Jonas yes 19.0

- 9. Write a Python program to draw a line with suitable label in the x axis, y axis and a title
- 10. Write a Python program to draw a line using given axis values taken from a text file, with suitable label in the x axis, y axis and a title.

Test Data: test.txt 1 2

Objectives	To implement different threats, process scheduling and mer	nory.				
Expected Outcome	Ability to understand the components of operating system	Ability to understand the components of operating system and interaction among				
	various components.					
List of Evnoviments						

List of Experiments

- 1. Design, develop and execute a program using any thread library to create number of threads specified by the user ,each thread independently generate a random integer as an upper limit and then computes and prints the number of primes less than or equal to that upper limit along with that upper limit.
- 2. Rewrite above program such that the processes instead of threads are created and the number of child processes created is fixed as two. The program should make use of kernel timer to measure and print the real time, processor time user space time and kernel space for each process
- 3. Design, develop and implement a process with a producer thread and a consumer thread which make use of bounded buffer (size can be prefixed at a suitable value) for communication. Use any suitable synchronization construct.
- 4. Write a C program to simulate producer-consumer problem using semaphores.
- 5. Design and execute a program to solve a system of n linear equations using Successive Over relaxation method and n processes which use Shared Memory API.
- 6. Design, develop, and execute a program to demonstrate the use of RPC.

Course Prerequisites	Nil									
Objective	To conduct digital investigations that conform to accepted professional standards and are based on the investigative process: identification, preservation, Examination, analysis, and reporting.									
Expected Outcome	Students will be able to understand the origins of forensic science, explain the difference between scientific conclusions and legal decision-making and explain the role of digital forensics and the relationship of digital forensics to traditional forensic science, traditional science and the appropriate use of scientific methods

CSE-AIML Specialization

CS3741	Title: Search Algorithms Lab	L	T	P	C				
		0	0	2	1				
Version No.	1.0								
Course Prerequisites									
	To be able to explain and implement sequential search and binary search.								
	• To be able to explain and implement selection sort, bubble sort,								
Obligation	merge sort, quick sort, insertion sort, and shell sort.								
Objective	 To understand the idea of hashing as a search technique. 								
	• To introduce the map abstract data type.								
	To implement the map abstract data type using hashing.								
	To learn basics of programming with a modern programming language,								
	Java.								
	• To learn and uses the basics of algorithm analysis, including big-O notation.								
-	To learn and understand the array standard data structure. Know the								
Expected Outcome	standard interface for an Array.								
	 To learn and implement standard algorithms for sorting arrays. 								
	To understand Java collection classes and the basics of memory								
	management.								
	To learn and implement the List standard data structure. Kno	w the	e sta	ndar	d				
	interface for a List.								

List of Experiments

- 1. Perform DFS using Python
- 2. Perform BFS using Python
- 3. Determine whether goal- or data-driven search would be preferable for solving each of the following problems. Justify your answer.
- a) Diagnosing mechanical problems in an automobile.
- b) You have met a person who claims to be your distant cousin, with a common ancester named "John Doe". Verify the claim.
- c) Another person claims to be your distant cousin. He does not know the ancester's name, but knows that it was more than eight generations back. You would like to find this ancester or determine she does not exist.
- 4. A snake is in a maze of N*N sized matrix. It has to travel from source to destination block, but can move only forward or down. Ow will you achieve this. Use Python.

Note: Grey blocks are deadends

- 5. Given a graph and a source vertex in the graph, find shortest paths from source to all vertices in any given graph. Use Dijkstra's algorithm.
- 6. What is mother vertex? Find a mother vertex in any given graph.
- 7. Solve the traveling salesman problem using genetic algorithm in python.
- 8. Imagine a real life situation, where you are using a Map (Map on a paper). You are at point A and want to reach point B. Which algorithm you would choose and why.
- 9. Implement question 8, using python.
- 10. Explain a use case and implement Stochastic hill climbing algorithm using python.
- 11. Solve the 8 puzzle problem using appropriate algorithm and python.

CS3807	Title: Fault Tolerant Computing	L T P C 3 0 0 3						
Version No.	1.0							
Course Prerequisites	None							
Objective	Dependability is now a major requirement for all computing system applications. Computer hardware, software, data, networks and syst subject to faults. The faults cannot be eliminated, however their implimited and a suitably designed fault-tolerant system can function expresence of faults. This course introduces the widely applicable con and fault-tolerant computing. Topics to be covered include basic test hardware and software faults, reliability evaluation, design and eval redundant systems, relationship between testing and reliability, soft growth, security vulnerabilities and emerging issues.	tems are always pact can be even in the acepts in reliable sting concepts, luation of ware reliability						
Expected Outcome	 The course will provide the students a background so that they can: understand techniques to model faults and know how to generate tests and evaluate effectiveness; evaluate reliability of systems with permanent and temporary faults; determine applicability of these forms of redundancy to enhance reliability: spatial, temporal, procedural; assess the relation between software testing and residual defects and security vulnerabilities, devise and analyse potential solutions for emerging issues.

CS3802	Title: Cloud Computing Fundamentals	L T P C 3 0 0 3						
Version No.	1.0	-L						
Course Prerequisites	Nil							
Objective	To provide students with the fundamentals and esser Computing and also a sound foundation of the Cloud they are able to start using and adopting Cloud Comptools in their real life scenarios. To expose the student Cloud Computing and information systems, while produced for the provided the computing and computing and research.	d Computing so that puting services and nts to frontier areas of coviding sufficient						
	Explain the core concepts of the cloud computing pa	radigm.						
	To provide students with the fundamentals and Computing.	l essentials of Cloud						
Expected Outcome	To lay a sound foundation of the Cloud Computing start using and adopting Cloud Computing services life scenarios.	•						
	To expose the students to frontier areas of Cloud Computing and information systems, while providing sufficient foundations to enable further study and research.							
	Apply the fundamental concepts in datacenters to understand the tradeoffs in power, efficiency and cost.							
Unit No.	Unit Title	No. of Hrs (Per Unit)						
Unit I	Cloud Technological and Business Game Changer	4						
architecture, The GCP (Goog	Traditional architecture, Services models (IaaS, PaaS gle cloud platform) console, install and configure Cloul code editor, Cloud console mobile app.							
Unit II	Use GCP to Build Your Apps	6						
autoscaling, Exploring PaaS	oud, Exploring IaaS with Compute Engine, Configuri with App Engine, Event driven programs with cloud ating apps with Google Kubernetes Engine.							
Unit III	Structured and Unstructured Storage models	5						
using Cloud Storage, SQL m	Storage options in the cloud, Structured and unstructured storage in the cloud, Unstructured storage using Cloud Storage, SQL managed services, Exploring Cloud SQL, Cloud Spanner as a managed service, NoSQL managed service options, Cloud Datastore, a NoSQL document store, Cloud Bigtable as							
Unit IV	Cloud APIs and Cloud Security	5						
The purpose of APIs, Cloud Endpoints, Using Apigee Edge, Managed message services, Exploring Cloud SQL, Cloud Pub/Sub, Introduction to security in the cloud, The shared security model, Encryption options, Authentication and authorization with Cloud IAM, Identify Best Practices for Authorization using Cloud IAM.								
Unit V	Cloud Networking, Automation and Management Tools	6						

Introduction to networking in the cloud, Defining a Virtual Private Cloud, Public and private IP address basics, Google's network architecture, Routes and firewall rules in the cloud, Multiple VPC networks, Building hybrid clouds using VPNs, interconnecting, and direct peering, Different options for load balancing, Introduction to Infrastructure as Code, Cloud Deployment Manager, Public and private IP address basics.

Course Outcome for CS3802

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	Understand the fundamental principles of distributed computing.	2	Emp
CO2	Understand how the distributed computing environments known as Grids can be built from lower level services.	2	Emp
CO3	Understand the importance of virtualization in distributed computing and how this has enabled the development of Cloud Computing.	2	S
CO4	Understand the concept of Cloud Security.	2	Emp
CO5	Analyze the performance of Cloud Computing	1	S

Program Elective I

CS3609	Title: Cryptography and Network Security	L 3	0	T I	2 (C			
Version No.	1.0								
Course Prerequisites									
Objective	To know the methods of conventional encryption. To underst public key encryption and number theory. To understand autifunctions. To know the network security tools and application system level security used.	henti	cat	tion a	and	Hash			
 Understand the most common type of cryptographic algorithm and number theory Students will learn and Understand the Public-Key Infrastructu Understand security protocols for protecting data on networks Be able to digitally sign emails and files. Understand vulnerabil assessments and the weakness of using passwords for authentication. Be able perform simple vulnerability assessments and password audits Be able to configure simple firewall architectures To Understand the concepts of Virtual Private Networks 									
Unit No.	Unit Title			lo. o Per l					
Unit I	Introduction and Number Theory			7					
Cryptography, Steganography,	Information Security, Security Objectives, OSI Security Architecture, Cryptography: Symmetric and Asymmetric Cryptography, Steganography, Symetric Encryption Model, Introduction to Group, Conventional Encryption Techniques: Substitution ciphers and Transposition ciphers, Stream and Block Ciphers, Cryptanalysis.								
Unit II	Block Ciphers and Public Key Cryptography	_		7	,				
and Diffusion, Fiestal Structur Functions, Key Generation. Int	Modern Block Ciphers: Components of Modern Block Ciphers, Product Ciphers, Shannon's Theory of Confusion and Diffusion, Fiestal Structure: Improved and Final Design, Data Encryption Standard(DES): Rounds, Round Functions, Key Generation. Introduction to Prime and relative prime numbers, Key Distribution, Random Number Generation. Public Key Cryptography, RSA algorithm, Diffie-Hellman Key Exchange Algorithm.								
Unit III	Hash Functions and Digital Signatures			8					
Security of Hash Functions and	age Authentication Code (MAC) and Message Digest Code (MAC, MD5 Message Digest Algorithm, Secure Hash Algorith Authentication Protocols, Digital Signature Standards (DSS).								
Unit IV	Network and System Security								
Key Distribution, Key Exchange, Authentication- Kerberos: Operation and Servers, X.509 Certificate, Electron Mail Security- Pretty Good Privacy (PGP), S/MIME. Network Protocols: TCP/IP, HTTP. Version No.	1.0	-								
Course Prerequisites	None									
Objective	, ,	To study the image fundamentals and mathematical transforms necessary for mage processing. To study the image enhancement techniques. To study image restoration procedures. To study the image compression procedures.								
Expected Outcome	 Review the fundamental concepts of a digital image prod Analyze images in the frequency domain using various t Evaluate the techniques for image enhancement and ima Categorize various compression techniques. CO5: compression standards. Interpret image segmentation and representation techniq 	ransforms. ge restoration. Interpret Image								
Unit No.	Unit Title	No. of Hrs (Per Unit)								
Unit I	Introduction and Fundamentals	8								
<u> </u>	re, Applications, Components of Image Processing System, Element o									

Motivation and Perspective, Applications, Components of Image Processing System, Element of Visual Perception, A Simple Image Model, Sampling and Quantization. Image Enhancement in Spatial Domain: Introduction; Basic Gray Level Functions – Piecewise- Linear Transformation Functions: Contrast Stretching; Histogram Specification; Histogram Equalization; Local Enhancement; Enhancement using Arithmetic/Logic Operations – Image Subtraction, Image Averaging; Basics of Spatial Filtering; Smoothing - Mean filter, Ordered Statistic Filter; Sharpening – The

Laplacian.

Unit II	Image Enhancement in Frequency Domain	7							
Fourier Transform and the Frequency Domain, Basis of Filtering in Frequency Domain, Filters -Low-pass, High-									
pass; Correspondence Between Filtering in Spatial and Frequency Domain; Smoothing Frequency Domain									
Filters – Gaussian Lowpass I	Filters – Gaussian Lowpass Filters; Sharpening Frequency Domain Filters – Gaussian High pass Filters;								
Homomorphic Filtering.Image Restoration: A Model of Restoration Process, Noise Models, Restoration in the									
presence of Noise only-Spatial Filtering – Mean Filters: Arithmetic Mean filter, Geometric Mean Filter, Order									
Statistic Filters – Median Filt	ter Max and Min filters: Periodic Noise Red								

Unit III Color Image Processing 7

Color Fundamentals, Color Models, Converting Colors to different models, Color Transformation, Smoothing and Sharpening, Color Segmentation. Morphological Image Processing: Introduction, Logic Operations involving Binary Images, Dilation and Erosion, Opening and Closing, Morphological Algorithms – Boundary Extraction, Region Filling, Extraction of Connected Components.

Unit IV Registration & Segmentation 7

Introduction, Geometric Transformation – Plane to Plane transformation, Mapping, Stereo Imaging – Algorithms to Establish Correspondence, Algorithms to Recover Depth

Introduction, Region Extraction, Pixel-Based Approach, Multi-level Thresholding,

Local Thresholding, Region-based Approach, Edge and Line Detection: Edge Detection, Edge Operators, Pattern Fitting Approach, Edge Linking and Edge Following.

Unit V Feature Extraction 7

Representation, Topological Attributes, Geometric Attributes, Description: Boundary-based Description, Region-based Description, Relationship. Object Recognition: Deterministic Methods, Clustering, Statistical Classification, Syntactic Recognition, Tree Search, Graph Matching

CS3722	Title: Computer Vision and Image Processing	L 3	T 0	P 0	C 3
Version No.	1.0				
Course Prerequisites	Nil				
Objective	To introduce students the fundamentals of image formation; To major ideas, methods, and techniques of computer vision and develop an appreciation for various issues in the design of com recognition systems; and To provide the student with program implementing computer vision and object recognition application.	pattern puter v nming	rec visic	ogn on a	ition; nd ob
Expected Outcome	 After completing the course you will be able to: Identify basic concepts, terminology, theories, models and computer vision. Describe known principles of human visual system, Describe basic methods of computer vision related to multi-sedge detection & other primitives, stereo, motion and object resuggest a design of a computer vision system for a specific present of the computer vision system for a specific present object recognition systems. 	cale repecogning to the contract of comments of commen	prese tion,	enta , er v	ition,
Unit No.	Title		o. of Per U		
Unit I	Introduction to Computer Vision and Image Processing	(1	 (J 441 (<u>y</u>
Imaging Geometry, Image Samplin Enhancements-Intro, Image Segmentracking Unit II Introduction, GUI Features, Opera and Tracking, Stereo Imaging, Contraction and Spatial Filt Matching (Specification), Local	Introduction to Open CV tions: Pixel Editing, Geometric Transformations, Feature Detections: Pixel Editing, Geometric Transformations, Image Denoising, ering Introduction, Functions, Histogram, Histogram Equality Histogram Processing, Using Histogram Statistics for Immoothing & Sharpening Image Filters	on, Vic Objec zation,	tion, leo A	n, Ir , O	nage bject llysis etion, gram
Unit III	Image compression & Segmentation-I				
Fundamentals, Coding Redundanc Huffman Coding, Golomb Coding, Bit-Plane Coding, Block Transform Unit IV Human Vision, Applications, Poi Visual Appearance, Image Segme	y, Spatial Redundancy, Irrelevant Information, Models, Compres, Arithmetic Coding, LZW Coding, Run-Length Qlding, Symbol- n Coding, Predictive Coding, Wavelet Coding, Image compression & Segmentation-II nt Line and Edge Detection, Shot Boundary Detection, Interaction by Clustering Pixels, Basic Clustering Methods, The Walphs, Fitting, Motion Segmentation, Model Selection, Case Studies	Based tive Se	Cod	enta	tion,
Unit V	Object Recognition & Tracking, Motion Estimation				
Shape correspondence and shape n Objects, Tracking, Strategies, Mate	natching, Sliding Window Method, Patterns, Structural Methods, ching, Tracking with Filters, Data Association, Particle Filtering, o Vision, Motion estimation, Structure from motion Course Material provided by Xebia Academy				1
Reference Books	Course Material provided by Xebia Academy				
Mode of Evaluation	Internal and External Examinations				
Recommended by Board of Studied on	11-07-2020				
Date of Approval by the Academic Council on	13-09-2020				

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Emp)/ Skill(S)/ Entrepreneurship (Ent)/ None (Use, for more than One)
CO1	To introduce students the fundamentals of image formation; To introduce students the major ideas, methods,	2	Emp
CO2	To introduce students the major ideas, methods, and techniques of computer vision and pattern recognition;	2	Emp
CO3	To develop an appreciation for various issues in the design of computer vision and object recognition systems;	2	Emp
CO4	To provide the student with programming experience from implementing computer vision and object recognition applications.	2	Emp
CO5	The Students should be able to build image processing applications	2	Emp

CS3751	Title: Malware Analysis and Reverse Engineering II	L 3	T 0	P 0	C 3							
Version No.	1.0											
Course Prerequisites	Nil											
Objective	The course aims to understand the concept about Ma Reverse Engineering applications.	ware	Ana	lysis	and							
	After learning the course the students should be able	to:										
	• Understand basics of Malware Analysis and Revers		ginee	ering-	-2.							
	• Comprehend the intricate concept of malware analysis.											
Expected Outcome	Able to decode cyber security issues in malware based attacks.											
•	• Perform evaluation of user support & dynamic malware analysis											
	Learn Automated Malware Analysis Tools											
		1
