Study & Evaluation Scheme

Study Summary

Name of the Faculty	Faculty of Technology
Name of the School	Quantum School of Technology
Name of the Department	Department of Civil Engineering
Program Name	Bachelor of Technology in Civil Engineering
Duration	4 Years
Medium	English

Evaluation Scheme

Type of Papers	Internal Evaluation (%)	End Semester Evaluation (%)	Total (%)					
Theory	40	60	100					
Practical/Dissertations/Project Report/Viva-Voce	40	60	100					
Internal Evaluat	ion Components	(Theory Papers)						
Mid Semester Examination		60Marks						
Assignment–I		30Marks						
Assignment-II		30Marks						
Attendance		30Marks						
Internal Evaluation	on Components (Practical Papers)						
Quiz One		30Marks						
Quiz Two		30Marks						
Quiz Three		30Marks						
Lab Records/Mini Project		30Marks						
Attendance		30Marks						
End Semester	Evaluation (Pra	ctical Papers)						
ESE Quiz		40Marks						
ESE Practical Examination (write-up)	20Marks							
Viva-Voce	20Marks							
Practical performance		20Marks						

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Parts a) and b) of question Q1 to Q5 will be compulsory and each part carries 2 marks. Parts c), d) and e) of Q1 to Q5 Carry 8 marks each and the student may attempt any 2 parts.

Important Note:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Specific Outcomes (PSOs). A question paper must assess the following aspects of learning: Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall becontinuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure – Bachelor of Technology in Civil Engineering Introduction

Bachelor of Technology in Civil Engineering syllabus is broad and multidisciplinary consists of various courses in Structural Engineering, Environmental Engineering, Geotechnical Engineering, Transportation Engineering, Construction Engineering, Urban and Community Planning apart from supporting courses in Basic Sciences, Humanities, and Agricultural Engineering.

The Bachelor of Technology in Civil Engineering subjects are designed in such a way that students grasp all the knowledge related to Civil Engineering and environmental science. Towards enhancing employability and entrepreneurial ability of the graduates the Quantum University increase the practical content in the courses wherever necessary. The total number of credit hours is 8 semesters including Student READY programme will range from 175 to 187 for all the programmes.

In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands and needs The Quantum University offering the specializations like majoring in Structural Engineering, Geotechnical Engineering, Transportation Engineering, Environmental Engineering, Water Resource Engineering.

SUMMER CAMP: This program will be undertaken by the students for a total duration of 02 weeks with a weightage of 2 credit. It will consist of general orientation and outside-campus training in hilly location. The students would be attached with the sloppy terrain to get an experience of the environment and working. Due weightage in terms of credit hours will be given depending upon the duration of stay of students in the camp. At the end of survey camp, the students will be given one week for project report preparation, presentation and evaluation.

The students would be required to record their observations in field on daily basis and will prepare their project report based on these observations.

Curriculum (21-25) Version 2021.01

B. Choice Based Credit System (CBCS)Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the Bachelor of Technology in Civil Engineering program:

Core competency: Students will acquire core competency in Bachelor of Technology in Civil Engineering and in allied subject areas.

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic& advance knowledge and concepts of civil engineering.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a graduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A graduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skills will definitely develop acumen to perform well during the recruitment process of any premier organization and will have the desired confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world.

Skill Enhancement Course: This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Open Elective (OE): Open Elective is an interdisciplinary additional subject that is compulsory in a program. The score of Open Elective is counted in the overall aggregate marks under Choice Based Credit System (CBCS). Each Open Elective paper will be of 3 Credits in IV, V and VI semesters. Each student has to take Open Electives from department other than the parent department. Core / Discipline Specific Electives will not be offered as Open Electives.

Quantum University Syllabus (Batch 2021-2025)

Program Course (PC): This is a compulsory course but audit that does not have any choice and may be of 3 credits. Each student of Bachelor of Technology in civil engineering program has to compulsorily pass the Environmental Studies and Human values & professional Ethics

C. Program Outcomes of Bachelor of Technology in Civil Engineering

Program Outcomes (POs)

The curriculum and syllabus have been structured in such a way that each of the courses meets one or more of these outcomes. Program outcomes describe what students are expected to know and be able to do by the time of graduation. These relate to the skills, knowledge and behaviors that students acquire as they progress through the program. Further each course in the program spells out clear course outcomes (COs) which are mapped to the program outcomes.

Engineering Graduate will be able to:

Eligilicer	ing Graduate wiii be able	
		n – Bachelor of Technology in Civil Engineering
PO-01	Engineering	Apply the knowledge of mathematics, science, engineering fundamentals,
	knowledge	and an engineering specialization to the solution of complex civil engineering
		problems.
PO-02	Problem analysis	Identify, formulate, review research literature, and analyze complex
		engineering problems reaching substantiated conclusions using first
		principles of mathematics, natural sciences, and engineering sciences.
PO-03	Design/development of	Design solutions for complex engineering problems and design system
	solutions	components or processes that meet the specified needs with appropriate
		consideration for the public health and safety, and the cultural, societal, and
		environmental considerations.
PO-04	Conduct investigations	Use research-based knowledge and research methods including design of
	of complex problems	experiments, analysis and interpretation of data, and synthesis of the
		information to provide valid conclusions.
PO-05	Modern tool usage	Create, select, and apply appropriate techniques, resources, and modern
		engineering and IT tools including prediction and modeling to complex
		engineering activities with an understanding of the limitations.
PO-06	The engineer and	Apply reasoning informed by the contextual knowledge to assess societal,
	society:	health, safety, legal and cultural issues and the consequent responsibilities
		relevant to the professional engineering practice.
PO-07	Environment and	Understand the impact of the professional engineering solutions in societal
	sustainability:	and environmental contexts, and demonstrate the knowledge of, and need for
		sustainable development.
PO-08	Ethics	Apply ethical principles and commit to professional ethics and
		responsibilities and norms of the engineering practice.
PO-09	Individual and team	Function effectively as an individual, and as a member or leader in diverse
- **	work	teams, and in multidisciplinary settings.
PO-10	Communication:	Communicate effectively on complex engineering activities with the
		engineering community and with society at large, such as, being able to
		comprehend and write effective reports and design documentation, make
	1	comprehend and write effective reports and design documentation, make

		effective presentations, and give and receive clear instructions.										
PO-11	Project management	Demonstrate knowledge and understanding of the engineering and										
	and finance:	management principles and apply these to one's own work, as a member ar										
		leader in a team, to manage projects and in multidisciplinary environments.										
PO-12	Lifelong learning	Recognize the need for, and have the preparation and ability to engage in										
		independent and life-long learning in the broadest context of technological										
		change										

D. Program Specific Outcomes (PSO's)

PSO1. Enhancing the employability skills by making the students find innovative solutions for challenges

and problems in domains of Civil Engineering.

PSO2: Inculcating in students tech suaveness to deal with practical aspects of Civil Engineering.

E. Program Educational Objectives (PEO's)

PEO1. To be well familiar with the concepts of Civil Engineering for leading a successful career in

industry or as entrepreneur or to pursue higher education.

PEO 2. To develop techno-commercial skills for providing effective solution using knowledge of Civil

Engineering

PEO 3. To instil lifelong learning approach towards constantly evolving technologies with innovative and

ethical mindset

F. Pedagogy & Unique practices adopted:

"Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" online or face-to-face. They alter the power ratios in teaching and learning relationships between students and educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video Based Learning (VBL) & Learning through Movies (LTM): These days technology has taken a front seat and classrooms are well equipped with equipment and gadgets. Video-based learning has become anindispensable part of learning. Similarly, students can learn various concepts through movies. In fact, many teachers give Quantum University Syllabus (Batch 2021-2025)

Page 16 of 165

examples from movies during their discourses. Making students learn few important theoretical concepts through VBL & LTM is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL & LTM, wherever possible.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

Industrial Visits: Industrial visit are essential to give students hand-on exposure and experience of how things and processes work in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for a report of such a visit relating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students toundertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.

- f) Marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry anoverall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slowlearners &fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners.

Induction program: Every year 3 weeks induction program is organized for 1st year students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: Organizing & participation in extracurricular activities will be mandatory to help students develop confidence & face audience boldly. It brings out their leadership qualities along with planning Quantum University Syllabus (Batch 2021-2025)

Page 18 of 165

& organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning (A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning (A2 Assignment), workshops, and Seminars& Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/ initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

Detailed Syllabus (Semester wise /course wise)

SEMESTER 1

MA3102	Title: Mathematics-I	L T P C 3 2 0 4
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide essential knowledge of basic tools of Differential Calculus, Integral Calculus, Vector Calculus and Matrix Algebra.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Matrix Algebra	8
Elementary operations and	their use in getting the Rank, Inverse of a matrix and solution of l	inear simultaneous
equations. Eigen-values and	d Eigenvectors of a matrix, Symmetric, Skew-symmetric, Hermitian	n, Skew-Hermitian,
Orthogonal and Unitary matr	rices and their properties, Cayley-Hamilton theorem, Diagonalization of	a matrix.
Unit II	8	
Change of variables, chain	rentiability of functions of two variables, Euler's theorem for homogrule, Jacobians, Taylor's Theorem for two variables, Error approxim	
	iables, Lagrange's method of undetermined multipliers	
Unit III	Integral Calculus	6
variables.	d quadric surfaces, Double and Triple integrals, Change of order of inte	egration. Change of
Unit IV	Application of Multiple Integration	6
Gamma and Beta functions. of gravity and moment of inc	Dirichlet's integral. Applications of Multiple integrals such as surface arertia.	rea, volumes, centre
Unit V	Vector Calculus	8
	gradient, divergence, curl and their physical meaning. Identities it d surface integrals. Green's, Gauss and Stroke's theorem and their applic	
Text Books	1. R.K. Jain and S.R.K. Iyenger, Advanced Engineering Mathematics, House	Narosa Publishing
Reference Books	1. E. Kreyszig, Advanced Engineering Mathematics, John Wiley and Sc 2. M.D. Weir, J. Hass, F.R. Giordano, Thomas' Calculus, Pearson Educ	
Mode of Evaluation	Internal and External Examinations

Course Outcome for MA3102

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use , for more than One)
CO1	Students should be able to learn the basic principles of multi-variable calculus with their proofs. They should be able to classify partial differential equations and transform them into canonical form. They will also understand how to extract information from partial derivative models in order to interpret reality.	2	Em
CO2	Students should be able to understand and learn how to find the area and volume of any region and solid body respectively by integral and also find the moments of inertia for a thin plate in plane.	2	S
CO3	Students should be able to understand theorems related to directional derivative of gradient and reproduce its proof. They should be able to Explain the concept of a vector integration in a plane and in space.	2	S
CO4	Students should be able to know basic application problems described by second order linear differential equations with constant coefficients. They should be also able to understand and solve the applications associated with Laplace Transform.	2	En
CO5	Students should be able to solve the linear equations using matrix properties and Determine characteristic equation, eigenvalues, eigenvectors and diagonalizable of a matrix.	1	None

PS3101	Title:Human Values and Ethics	L T P C 2 0 0 2
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To facilitate the development of a holistic perspective among students towards life and profession as well as towards happiness and prosperity based on a correct understanding of the human reality and the rest of existence	
Expected Outcome	This course will make the students aware and sensitive to value systems in real life situations. It will help them to discriminate between ephemeral and eternal value and to discriminate between essence and form	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction of Value Education	5
	pasic guidelines, content and process of Value Education spirations: Self Exploration–its content and process	
Unit II	Understanding Harmony - Harmony in Myself!	5
	in harmony; as a co-existence of the sentient, attitude and its importance in characteristics and activities of Self ('I')	relationship.
Unit III	Understanding Harmony in the Family and Society	5
	ralues in human relationships; meaning of Nyaya, Trust (Vishwas) and Roof relationships. 2. Harmony in society:Samadhan, Samridhi, Abhayls.	
Unit IV	Understanding Harmony in the Nature and Existence	4
	ony in Nature: Interconnectedness among the four orders of nature-recyclal perception of harmony at all levels of existence	clability and self-
Unit V	Understanding Professional Ethics	5
b) Ability to identify thec) Ability to identify andsystems.	rofessional competence for augmenting universal human order scope and characteristics of people-friendly and eco-friendly production sy develop appropriate technologies and management patterns for above production.	luction

Course Outcome for PS3101

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use , for more than One)
CO1	Students should be able to understand the significance of value inputs in a classroom, distinguish between values and skills, understand the need, basic guidelines, content and process of value education, explore the meaning of happiness and prosperity and do a correct appraisal of the current scenario in the society.	2	Em
CO2	Students should be able to distinguish between the Self and the Body, understand the meaning of Harmony in the Self the Co-existence of Self and Body.	2	S
CO3	Students should be able to understand the value of harmonious relationship based on trust, respect and other naturally acceptable feelings in human-human relationships and explore their role in ensuring a harmonious society.	2	S
CO4	Students should be able to understand the harmony in nature and existence, and work out their mutually fulfilling participation in the nature.	2	En
CO5	Students should be able to distinguish between ethical and unethical practices, and start working out the strategy to actualize a harmonious environment wherever they work.	1	None

CS3140	Title:Basics of Computer and C Programming LAB	LTPC
		0 0 2 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Learning objectives is to improve confidence in technology use and increased awareness of opportunities afforded to individuals with Computer application skills.	
Expected Outcome	Recognize basic computer hardware architecture constructs such as instructions sets, memory, CPU, external devices, and data representation	
	List of Experiments	•

List of Experiments

- 1. Programs using I/O statements and expressions.
- 2. Programs using decision-making constructs.
- 3. Write a program to find whether the given year is leap year or Not? (Hint: not every centurion year is a leap. For example 1700, 1800 and 1900 is not a leap year)
- 4. Design a calculator to perform the operations, namely, addition, subtraction, multiplication, division and square of a number.
- 5. Check whether a given number is Armstrong number or not?
- 6. Populate an array with height of persons and find how many persons are above the average height.
- 7. Populate a two dimensional array with height and weight of persons and compute the Body Mass Index of the individuals.
- 8. Given a string a\$bcd./fgll find its reverse without changing the position of special characters. (Example input: a@gh%;j and output: j@hg%;a)
- 9. Convert the given decimal number into binary, octal and hexadecimal numbers using user defined functions.
- 10. From a given paragraph perform the following using built-in functions:
 - a. Find the total number of words.
 - b. Capitalize the first word of each sentence.
 - c. Replace a given word with another word.
- 11. Solve towers of Hanoi using recursion.
- 12. Sort the list of numbers using pass by reference.
- 13. Generate salary slip of employees using structures and pointers.
- 14. Compute internal marks of students for five different subjects using structures and functions.
- 15. Insert, update, delete and append telephone details of an individual or a company into a telephone directory using random access file.

EG3140	Title:Professional Communication LAB	L T P C 0 0 2 1
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide practice to students in an interactive manner to apply the fundamentals and tools of English communication to life situations	
Expected Outcome	The student will be able to retain and apply his skills of English communication effectively in personal, social and professional interactions.	

List of Experiments

- 1. Common conversation skills
- 2. Introductions
- 3. Making requests
- 4. Asking for permission
- 5. Asking questions
- 6. Describing events, people, places
- 7. Learning correct pronunciation, syllable, stress, intonation
- 8. Extempore speaking
- 9. Role play
- 10. Presentation skills
- 11. Grammar-tense practice
- 12. Mother tongue influence- correction
- 13. Speech making / public speaking
- 14. Listening effectively
- 15. E-mail Etiquettes

Mode of Evaluation	Internal and External Examinations

EC3140	Title:Basic Electrical and Electronics Engineering lab		P C 2 1
Version No.	1.0		
Course Prerequisites	Nil		
Objectives	To make students familiar with the fundamental laws featuring in the field of Electrical and Electronics Engineering.		
Expected Outcome	Students shall conceptualize and firmly grasp the basic electrical and electronics engineering laws along with the knowledge of fundamental circuits governing the functioning of important devices.		

List of Experiments

- 1. To verify the Kirchhoff's current and voltage laws.
- 2. To verify the Superposition theorem.
- 3. To verify the Thevenin's theorem.
- 4. To verify the Norton's theorem.
- 5. To verify the maximum power transfer theorem.
- 6. To study the V-I characteristics of p-n junction diode.
- 7. To study the diode as clipper and clamper.
- 8. To study the half-wave and full-wave rectifier using silicon diode.
- 9. To study transistor in Common Base configuration and plot its input/output characteristics.
- 10. To study various logic gates and verify their truth tables.

Course Prerequisites	VP3101							
Objectives Objectives	•							
Objectives	 To develop the English communication skills of our students. To enable them to communicate effectively and nurture their speaking skills in English. To inculcate in our students the ability to develop soft skills and professional etiquettes which will make them more suitable for jobs in the corporate sector. To overcome interaction phobia as English is not their mother tongue. 							
Expected Outcome	 After the Course the students will be able to write/understand and create sentences in English of all tenses. They will be able to take part in daily routine conversations in English. Students will be able to understand and be partially groomed in corporate etiquettes and culture

Date of approval by the	14-11-2021
Academic Council	

Course Outcome for VP3101

Course code	VP3101
Paper Title	Communication and Soft Skills-I
CO1	On the completion of course the Students will be able to write, understand, analyze and create sentences in professional language (English). Students' horizon will be expanded with the correct usage of Grammar in writing and speaking, and will be able to improvise their speaking ability.
CO2	Students will be able to take part in daily routine conversation in English
CO3	Students will be able to understand and partially be groomed in corporate etiquettes and culture
CO4	This course will aid the students to learn words and form strong vocabulary, use them correctly in a sentence while speaking and writing. Moreover, understand their meaning in the text
CO5	The Students will learn to use strategies to listen actively and able to distinguish more important ideas from less important ones. Implement them while participating in the discussions. Henceforth, It yields the improvement in understanding, analyzing, creating and implementing the learning into real world encounter, effectively.

SEMESTER 2

MA3202	Title:Mathematics-II	LTPC
		3 2 0 4
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide knowledge of essential mathematical tools applied in solving ordinary and partial differential equations, initial and boundary value problems	
Expected Outcome	Students will be familiar with various methods that lead to solving ODEs and PDEs.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Ordinary Differential Equations	8
coefficients. Euler-Cauchy	on of first order and first degree, Solution of linear differential equa equations, Solution of second order differential equations by chang od of variation of parameters.	
Unit II	Laplace Transform	8
and integrals. Convolution the	transform of some standard functions, Shifting theorems, Laplace transferm, Initial and final value theorem. Laplace transform of periodic fidelta function. Applications of Laplace transform for solving ODE.	
Unit III	Partial Differential Equations	8
	rential equations, Linear partial differential equations with constant Coo	
	n. Method of separation of Variables for solving PDE, One dimension	
	nensions, Heat conduction equations of one dimension and two dimension	
Unit IV	Infinite Series	6
	e and Divergence of an infinite series, Cauchy's General Principle, l'auchy's Root test, Cauchy's Integral Test, Alternating series, Leib convergence	
Unit V	Fourier series	6
Trigonometric Fourier series	and its convergence. Fourier series of even and odd functions. Fourier h	nalf-range series.
Text Books	R.K. Jain and S.R.K. Iyenger, Advanced Engineering Math Publishing House	nematics, Narosa
Reference Books	 E. Kreyszig, Advanced Engineering Mathematics, John Wiley and R.K. Jain and S.R.K. Iyenger, Advanced Engineering M Publishing House M.D. Weir, J. Hass, F.R. Giordano, Thomas' Calculus, Pearson Ed 	Mathematics, Narosa
Mode of Evaluation	Internal and External Examinations	
Recommendation by Board of Studies on	30-07-2021

Course Outcome forMA3202

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to understand ordinary differential equations, with their solutions through constant coefficients. They will also learn about Euler-Cauchy equations, Solution of second order differential equations by changing dependent and independent variables.	2	Em
CO2	Students should be able to understand the properties of Fourier series. And the relationship between Fourier series and linear time invariant system.	2	S
CO3	Students should be able to learn the basics of the theory of error and the approximation theory; the fundamental principles of mathematical modeling; the numerical methods for solving problems of algebra; and the methods of numerical integration and differentiation.	2	S
CO4	Students should be able to learn about Interpolation which is a useful mathematical and statistical tool used to estimate values between two points.	2	En
CO5	Students should be able to formulate and solve problems involving random variables and apply statistical methods for analyzing experimental data. They will also learn to analyses the complex function with reference to their analyticity, integration using Cauchy's integral and residue theorems. Taylor's and Laurent's series expansions of complex function will be also explored at the end of Unit.	1	None

CY3205	Title: Environmental Studies	LTPC
		2 0 0 2
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Creating awareness among engineering students about the importance of environment, the effect of technology on the environment and ecological balance is the prime aim of the course.	
Expected Outcome	Students will understand the transnational character of environmental problems and ways of addressing them, including interactions across local to global scales.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction to Environmental studies and Ecosystems	5

Multidisciplinary nature of environmental studies, Scope and importance, Need for public awareness. Concept, Structure and function of an ecosystem, Energy flow in an ecosystem: food chains, food webs and ecological pyramids. Examples of various ecosystems such as: Forest, Grassland, Desert, Aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries)

Unit II Natural Resources: Renewable and Non- renewable resources

Land as a resource, land degradation, landslides (natural and man-induced), soil erosion and desertification. Forests and forest resources: Use and over-exploitation, deforestation. Impacts of deforestation, mining, dam building on environment and forests. Resettlement and rehabilitation of project affected persons; problems and concerns with

examples. Water resources: Use and over-exploitation of surface and ground water, floods, drought, conflicts over water (international and inter-state).

Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture,

food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems with examples. Energy resources: Renewable and non-renewable energy sources, use of alternate energy sources, growing energy needs.

Unit III Biodiversity and Conservation

5

Levels of biological diversity: genetic, species and ecosystem diversity. Biogeographic zones of India. Ecosystem and biodiversity services. Biodiversity patterns and global biodiversity hot spots, India as a mega-biodiversity nation; Endangered and endemic species of India. Threats to biodiversity: Habitat loss, poaching of wildlife, man-wildlife conflicts, biological invasions. Conservation of biodiversity: In-situ and Ex-situ conservation of biodiversity.

Unit IV Environmental Pollution 4

Environmental pollution and its types. Causes, effects and control measures of :a) Air pollution b) Water pollution – freshwater and marine c) Soil pollution d) Noise pollution e) Thermal pollution

Nuclear hazards and human health risks, Solid waste management: Control measures of urban and industrial waste.

Unit V Environmental Policies and Practices

Concept of sustainability and sustainable development. Water conservation and watershed management. Climate change, global warming, acid rain, ozone layer depletion. Disaster management: floods, earthquake, cyclones and landslides.

Wasteland reclamation. Environment Protection Act. Air (Prevention and Control of Pollution) Act. Water (Prevention and control of Pollution) Act, Wildlife Protection Act, Forest Conservation Act, Issues involved in enforcement of environmental legislation. Environment: rights and duties. Population growth.

Field work

Visit to a local polluted site-Urban/Rural/Industrial/Agricultural

Study of simple ecosystems-	Study of simple ecosystems-pond, river, hill slopes, etc.

Course Outcome for ME3101

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to understand application of the laws of thermodynamics to wide range of systems and aware about the basics of thermal engineering applications in IC engines and its working.	2	Em
CO2	Students should be able to know and apply the types of forces and concepts used to analyses force mechanisms	2	S
CO3	Students should be able to analyze and understand the Stress-strain diagrams and use of material.	2	S
CO4	Students should be able to understand the various machining processes	2	En
CO5	Students should be able to gain knowledge on the various engineering materials and their properties.	1	None

PH3140	Title: Engineering Physics LAB	LTPC						
		0 0 2 1						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	The Objective of this course is to make the students gain practical knowledge to co-relate with the theoretical studies. To achieve perfectness in experimental skills and the study of practical applications will bring more confidence and ability to develop and fabricate engineering and technical equipment's.							
Expected Outcome	On Completion of this course, students are able to – Develop skills to impart practical knowledge in real time solution. Understand principle, concept, working and application of new technology and comparison of results with theoretical calculations.							
	List of Evnariments							

List of Experiments

- 1. To determine the wavelength of monochromatic light by Newton's ring.
- 2. To determine the wavelength of monochromatic light with the help of Fresnel's biprism.
- 3. To determine the focal length of two lenses by nodal slide and locate the position of cardinal points.
- 4. To determine the specific rotation of cane sugar solution using half shade polarimeter.
- 5. To determine the wavelength of spectral lines using plane transmission grating.
- 6. To determine the specific resistance of the material of given wire using Carey Foster's bridge.
- 7. To determine the variation of magnetic field along the axis of a current carrying coil and then to estimate the radius of the coil.
- 8. To verify Stefan's Law by electrical method.
- 9. To calibrate the given ammeter and voltmeter.
- 10. To study the Hall effects and determine Hall coefficient, carnier density and mobility of a given semiconductor material using Hall-effect set up.
- 11. To determine energy bank gap of a given semiconductor material.
- 12. To determine E.C.E. of copper using Tangent or Helmholtz galvanometer.
- 13. To draw hysteresis curve of a given sample of ferromagnetic material and from this to determine magnetic susceptibility and permeability of the given specimen.
- 14. To determine the balistic constant of a ballistic galvanometer.
- 15. To determine the viscosity of a liquid.

ME3140	Title: Workshop Practice	LTPC
		0 0 3 2
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To know about the working methods adopted in various mechanical	
	shops along with tools and equipment's for making a product. To	
	understand the working of IC engines, Refrigerator, Air conditioner	
Expected Outcome	Student will be able to develop skill in using machines, tools and	
	knowing the basic operations in each shop along with understanding the	
	working of IC engine, refrigerator and airconditioner.	
	List of Experiments	

1. Carpentry Shop:

- I. Study of tools and operations and carpentry joints.
- II. To prepare half-lap corner joint / mortise tendon joint.
- III. To make duster from wooden piece using carpentry tools

2. Fitting (Bench Working) Shop:

- I. Study of tools and operations.
- II. Step fitting of two metal plates using fitting tools.
- III. Drilling and Tapping for generating hole and internal thread on a metal plate.

3. Black Smithy Shop:

- I. Introduction of different Forging process.
- II. Study of tools and operations such as upsetting, drawing down, punching, bending, fullering and swaging.
- III. To forge chisel from MS rod.

4. Welding Shop:

- I. Introduction of Welding and its classification.
- II. Simple butt and Lap welded joints.

5. Sheet-metal Shop:

- I. Introduction of various sheet metal operations.
- II. Study of tools and operations.
- III. To make geometrical shape like frustum, cone and prisms using GI sheet.

6. Machine Shop:

- I. Introduction of Single point cutting tool, various machine tools.
- II. Simple operations like Plane turning, Step turning and Taper turning.

		2 0 0 2
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	The course is intended to provide a general concept in the dimensions of	
•	disasters caused by nature beyond the human control as well as the	
	disasters and environmental hazards induced by human activities with	
	emphasis on disaster preparedness, response and recovery.	
Expected Outcome	Enhance the knowledge by providing existing models in risk reduction	
•	strategies to prevent major causalities during disaster.	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit: 1	Introduction on Disaster	5
	r: A) Natural Disaster: such as Flood, Cyclone, Earthquakes, Landslides etc	B) Man-made
	dustrial Pollution, Nuclear Disaster, Biological Disasters, Accidents (Air,	
Road), Structural failures(H	Building and Bridge), War and Terrorism etc. Causes, effects and practical e	xamples for all
disasters.		•
Unit II	Risk and Vulnerability Analysis	4
Risk: Its concept and analy	sis 2. Risk Reduction 3. Vulnerability: Its concept and analysis 4. Strategi	c Development
for Vulnerability Reduction		•
Unit III	Disaster Preparedness	5
Disaster Preparedness: Co	oncept and Nature. Disaster Preparedness Plan Prediction, Early Warning	ngs and Safety
	tole of Information, Education, Communication, and Training, Role of	
International and NGO Boo	dies Role of IT in Disaster Preparedness. Role of Engineers on Disaster M	anagement.
Unit IV	Disaster Response	5
Introduction Disaster Re	esponse Plan Communication, Participation, and Activation of Emergence	y Preparedness
Plan Search, Rescue, Evac	cuation and Logistic Management Role of Government, International and	d NGO Bodies
Psychological Response an	nd Management (Trauma, Stress, Rumor and Panic). Relief and Recovery	Medical Health
Response to Different Disa	sters	
Unit V	Rehabilitation, Reconstruction and Recovery	5
Reconstruction and Rehab	pilitation as a Means of Development. Damage Assessment Post Disas	ter effects and
Remedial Measures. Crea	tion of Long-term Job Opportunities and Livelihood Options, Disaster R	esistant House
Construction Sanitation a	and Hygiene Education and Awareness, Dealing with Victims' Psychological	gy, Long-term
Counter Disaster Planning	Role of Educational Institute.	-

VP3201	Title: Communication and Soft Skills-II							
Version No.	1.0	0 0 2 1						
	VP3101							
Course Prerequisites								
Objectives	 To develop the English communication skills of our students. To enable them to communicate effectively and nurture their speaking skills in English. To inculcate in our students the ability to develop soft skills and professional etiquettes which will make them more suitable for jobs in the corporate sector. To overcome interaction phobia as English is not their mother tongue. 							
Expected Outcome	 After the Course the students will be able to write/understand and create sentences in English of all tenses. They will be able to take part in daily routine conversations in English. Students will be able to understand and be partially groomed in corporate etiquettes and culture 	N 61						
Unit No.	Unit Title	No. of hours (per Unit)						
Unit I	Functional Grammar	6						
 How to use Tenses-p 	ıld, shall/should, will/would, may/might, must, ought to							
Unit II	Speaking Skills	10						
	l etc. p, bank, post office y							
Unit III	Personality Enhancement	5						
Positive Attitude: Ber	ressing sense, good manners, speaking well and respectably ing happy and alert, a good listener and a good friend nee building and handling rejection	ı						
Unit IV	Vocabulary Development	5						
 Word Formation: Pre Homophones and one Words often confused Idiomatic phrases Antonyms and synon 	d and misused	1						
Unit V	Listening	4						
	9	7						
Main point in short s	imple conversations and messages							

	B. Tech LE Versio	n 2021
• Essential information	in short recorded passages on diverse matters	
Unit VI	Reading and Writing	6
Reading and writing or	of short, simple notes and messages	
 Basic descriptions about 	out everyday life in simple sentences	
• Short simple descripti	ons of events and reporting what happened when and where	
	r including expressions for greeting, addressing, asking or thanking	
 Completing a question 	nnaire giving information about background, interests, skills	
Text Books	3. High School Grammar by Wren & Martin revised by Dr. N.D.V.Prasada Rac	(S.Chand)
	4. Personality development by Harold R. Wallace (Cengage Learning)	
Reference Books	5. Essential English grammar by Raymond Murphy (Cambridge Univ. Press)	
	6. Practical English Usage by Michael Swan (Oxford)	
	7. Personality Development & Soft skills by Barun K. Mitra; 2nd edition (Oxfo	ord Univ. Press)
	8. Online Resources: Flipboard, TEDx, Youtube	
Mode of Evaluation	Internal and External Examinations

Date of approval by the	14-11-2021	
Academic Council		

Course Outcome for VP3201

Course code	VP3201
Paper Title	Communication and Soft Skills-II
CO1	After the course the students will be able to write/understand and create sentences in English of all tenses, Students will heighten their awareness of correct usage of English grammar in writing and speaking and will be able to improve their speaking ability in English both in terms of fluency and comprehensibility.
CO2	Students will be able to take part in daily routine conversation in English.
соз	Students will be able to understand and partially be groomed in corporate etiquettes and culture
CO4	This course will aid the students to learn new vocabulary words, use them correctly in a sentence while speaking and writing, , and understand their meaning in the text

CO5

The students will learn to use strategies to listen actively, will be able to distinguish more important ideas from less important ones and will participate in the discussions.

SEMESTER 3

	Title: Applied Hydraulics	LTPC								
		2 2 0 3								
	1.0									
	Nil									
Prerequisites										
· ·	To give knowledge on properties and behavior of fluid under various condition	ons								
Expected	• Students should be able to understand the basic principal of fluids									
Outcome	 Students should be able to understand kinematic property of fluids 									
	 Students should be able to understand the static and dynamic proper 	ty of fluids								
	• Students should be able to analysis the boundary layer theory on open	en channel								
	• Students should be able to analysis drag and lift on various bodies									
Unit No.	Unit Title	No. of hours								
		(per Unit)								
Unit: I	Introduction	6								
Fluid properties, Types	s of fluids, continuum principle, Basic equations,. Introduction to pumps and	turbines								
Unit II	Fluid Kinematics	6								
	Types of flow, Streamline, Path line, Streamline, Principle of conservation o	f mass, Velocity,								
acceleration, Velocity p	potential and Stream function, Vortices, Circulation.	-								
Unit III	Fluid Static & Dynamics	8								
	ometers, hydrostatic forces on submerged surfaces, buoyancy. Euler's equations, momentum and angular momentum equations and their applications.	tion, Bernoulli's								
Unit IV	Boundary Layer Theory	8								
	ary layer theory Uniform flow computations in open channels, Critical flow	-								
	Illy Varied Flow, (Applications in canals and rivers)	r								
Unit V	Drag and Lift	6								
	n drag -cylinder and flat plate, Von Karman vortex shedding, generation	of lift around a								
cylinder, lifting vanes.										
	1. Som, S.K. and Biswas, G., "Fluid Mechanics and Fluid Mechanics", Tat

CE3309	Title: Building Materials	LTPC
		2 0 0 2
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To give detailed knowledge on materials used for construction	
Expected	 Students should be able to understand properties and usage of bric 	ks
Outcome	Students should be able to learn property and usage of cement	
	Students should be able to understand properties and usage of store	nes
	Students should be able to understand properties and usage of tim	
	Students should be able to understand properties and usage of built Students should be able to understand properties and usage of built	
	like asphalt, Bitumen, insulating materials, nano materials & smar	-
	like aspirant, bitumen, insulating materials, nano materials & sinal	imateriais
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit: 1	Bricks	4
Composition of good	brick earth, harmful ingredients, manufacture of bricks, characteristics of go	od bricks, shapes,
	ss as per IS 1077-1985 and testing.	
Unit II	Concrete	4
	nysical and Chemical property; Aggregate physical and Chemical property; P	roperty of fresh
	e. Concreting materials in hilly area	
Unit III	Stones	4
	s, Test for stones, Characteristics of a good building stone, Deterioration of s	tones, Common
building stones of hil		T -
Unit IV	Timber and Metals	6
	entification of timber, Defects in timber, Characteristics of good timber, Se	
	, Market forms of steel e.g. mild steel and HYSD steel bars, Rolled Steel	Sections. Thermo
Mechanically Treated		1
Unit V	Miscellaneous Materials	4
	sulating materials, Nano material, Fire resistant material & Smart materials	1

Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To impart basic knowledge of problems involving flow of fluids such force of fluid on structural surfaces, fluid transport.	as in aerodynamics,
Expected Outcome	 Students should be able to perform basic tests on fluids Students should be able to perform basic tests on hydraulic flume 	es
	T + 4 0 PD + 4	

List of Experiments

- 1. To verify the Bernoulli's theorem.
- 2. To determine the friction factors for the pipes. (Major Losses)
- 3. To determine the Meta-centric height of a floating body.
- 4. To calibrate an orifice meter and study the variation of the co-efficient of discharge with Reynolds's number.
- 5. To determine the losses co-efficient for pipe fitting.
- 6. To study the transition from Laminar to Turbulent flow and to determine the Lower critical Reynolds's number.
- 7. To determine the coefficient of discharge of Venturimeter.
- 8. To determine the Manning's coefficient of roughness 'n' for the given channel bed
- 9. To study the characteristic of free hydraulic jump
- 10. To study the flow through a horizontal contraction in a rectangular channel

CE3346	Title: Basics Ground Surveying Lab	LTPC						
		0 0 2 1						
Version No.	1.0							
Course	Nil							
Prerequisites								
Objectives	To develop methods through the knowledge of modern science and the technology and use them in the field.							
Expected Outcome	 Students should be able to perform leveling and can find horizontal and vertical angles using surveying instruments Students should be able to plot traverse and contours. 							
List of Experiments								

List of Experiments

- 1. To prepare conventional symbol chart based on the study of different types of topographical maps.
- 2. To measure bearings of a closed traverse by prismatic compass and to adjust the traverse by graphical method.
- 3. To find out reduced levels of given points using Auto/dumpy level.
- 4. To perform fly leveling with Auto/tilting level.
- 5. To study parts of a Vernier theodolite and measurement of horizontal and vertical angle.
- 6. To measure horizontal angle between two objects by repetition/reiteration method.
- 7. To determine the height of a vertical structure (e.g. chimney/ water tank etc.) using trigonometrically leveling by taking observations in single vertical plane.
- 8. To study various parts of Electronic Theodolite,
- 9. Total Station and practice for measurement of distance, horizontal and vertical angles.
- 10. To set out a simple circular curve by Rankine's method.
- 11. To exercise two point and three point problem using plane table surveying
- 12. To prepare contour map

Course Prerequisites	Nil	
Objectives	Students will explore career options in the building construction industry.	•
Expected Outcome	 Students should be able to perform basic test on building n recommendations Students should be able to understand masonry and its construction 	-

List of Experiments

- 1. To conduct the field test on bricks viz hardness, shape and size, soundness, colour and strength.
- 2. Construction of various types of Brick Masonry and Their Joint
- 3. Construction of various types of Stone Masonry and Their Joint
- 4. To determine the crushing strength of bricks using compressive testing machine.
- 5. To determine the normal consistency of cement paste.
- 6. To determine the initial and final setting times of cement.
- 7. To determine the compressive strength of cement.
- 8. To determine the tensile strength of cement.
- 9. To determine the percentage bulking of sand in moist condition.
- 10. To determine the specific gravity of fine and coarse aggregates.
- 11. To conduct the tension test on the given mild steel specimen to determine yield, strength, ultimate strength, breaking strength, percentage, elongation and young's modulus.
- 12. Study on defects in timber

SEMESTER 5

CE3501	Title: Advance Structural Analysis	L T P C 2 2 0 3										
Version No.	1.0	2 2 0 3										
Course	CE3403											
Prerequisites		1 1 .										
Objectives	To provide information of fundamental issues in these advanced topics in structura besides enjoying the learning process, developing analytical and intuitive skills.	i anaiysis,										
Unit No.	Unit Title											
		(per Unit)										
Unit I	Moment Distribution Method	8										
Analysis of Beams	and Portal frames using moment distribution method.	- I										
Unit II	Slope Deflection Method	8										
Analysis of Beams	and Portal frames slope deflection method.	-										
Unit: III	Flexibility Matrix Method	8										
	ndeterminacy of structures, Formulation of Flexibility matrix and equations applied t											
	ious beams. Flexibility matrix for non-prismatic members	o shiipi c										
Unit IV	Stiffness Matrix Method	8										
	tics indeterminacy of structures, Formulation of stiffness matrix and equations applie	ed to simple										
	ious beams. Stiffness matrix method applied to simple plane frames.											
Unit V	Plastic Analysis	8										
Plastic analysis of	beams and frames (Static and kinematic method)											
Text Books	DevdasMenon, "Advanced Structural Analysis", Narosa Publishing House	2,										
Reference Books	3. AsslamKassimali, "Matrix Analysis of Structures.											
	4. Amin Ghali, Adam M Neville and Tom G Brown, "Structural Analysis: A	Unified										
	Classical and Matrix Approach"											
Mode of	Internal and External Examination											
Evaluation

CE3508	Title: Design of Reinforced Cement Concrete Structures	LTPC
		3 2 0 4
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	The design of Basic elements such as slab, beam, column and footing which for	m part of any
	structural system with reference to IS codes.	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit: 1	Methods of Design of Concrete Structures	3
	c method, ultimate load method and limit state method – Advantages of Limit Sta	
	Design codes and specification – Limit State philosophy as detailed in IS code – D	esign of beams
	ring stress method.	
Unit II	Limit State Design for Flexure	6
	gn of singly and doubly reinforced rectangular and flanged beams - Analysis and	
	continuous slabs subjected to uniformly distributed load for various boundary co	nditions.
Unit III	Limit State Design for Bond, Anchorage Shear and Torsion	6
	members in bond and Anchorage - Design requirements as per current code - Beh	avior of RC
	d torsion - Design of RC members for combined bending shear and torsion.	2
Unit IV	Limit State Design of Columns	3
	Braced and unbraced columns – Design of short Rectangular and circular columns	nns for axial,
uniaxial and biaxi		
Unit V	Limit State Design of Footing	6
	oting – Design of axially and eccentrically loaded rectangular pad and sloped foot	ıngs – Design
	angular footing for two columns only.	•

CE3503	Title: Design of Steel Structures	LTPC
		2 2 0 3
Version No.	1.0	
Course	CE3501	
Prerequisites		
Objectives	To introduce the limit state design of steel structural components subjected to compression and tensile loads including the connections.	o bending,
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction	8
Properties of steel, St	ructural steel sections, Limit State Design Concept, Loads on Structures, Conf	nections using
bolting, Welding, De	sign of bolted and welded joints, Eccentric connections.	C
Unit II	Tension Members	8
Types of section, Net	area, Net effective sections for angles and Tee in tension. Design of connection	ons in tension
members		
Unit: III	Compression Members	8
Compression membe	rs, Struts and Columns	
Unit: IV	Roof Trusses	8
Roof trusses, roof &	side coverings, Design loads, Purlins, members, endbearings.	
Unit V	Beam & Column	8
Beam column, Stabil	ity consideration, Interaction formulae, Column bases, Slab base, Gusseted base	se and grillage
footings.		
Text Books	1. N. Subramanian., "Steel Structures: Design and Practice", Oxford.

Course code	VP3501
Paper Title	Reasoning Ability
CO-1	This program lead to improve advance numerical skills of the students to do calculative part in short period of time.
CO-2	Understanding of advance question of directions, blood relations, ranking, coding-decoding, calendar, and clock enhance the analyzing power of students.
CO-3	Understanding how a person efficiency impact on TIME AND WORK, And let to know the power of compounding in COMPUND INTEREST, also Know about the percentage calculation in various aspects.
CO-4	Calculate advance problem of Time Speed and Distance in various aspects,, how Selling price and Cost price lead to profit or lose.
CO-5	With the help of this student can qualify for various competitive exams (BANK, SSC, POLICE, DEFENCE, ETC.) This will be helpful for written exam of various companies.

Objectives		

List of Experiments

- 1. Measurement of Rainfall by non –recording rain gauge.
- 2. Measurement of rainfall by recording rain gauge.
- 3. To determine mean rainfall of an area by Thiessen mean Polygon method.
- 4. To determine mean rainfall of an area by isohyetal method.
- 5. The determine meanings rogosity coefficient.
- 6. To determine the velocity of a running of a stream in a canal by current meter and calculate the approximate discharge of the canal.
- 7. To design a regime channel by Lacey's theory for a given .pattern of crops and area to be irrigated.
- 8. To determine the yield of an open well by recuperation test.
- 9. To determine the yield of an open well by constant level pumping test.
- 10. To visit a Multipurpose River valley, project and to prepare a report of the solid project.

		0 0 2 1				
Version No.	1.0					
Course Prerequisites	Nil					
Objectives	To impart basic knowledge on properties of soil and strength characteristics	as well which				
	are used for foundation designing.					
List of Experiments						

- To Find Particle Size Distribution of coarse grained soil using Sieve Analysis.
- 2. Determination of water content- dry density relation using light Proctor Compaction Test
- 3. Determination of In Situ dry density of soil using Sand Replacement Method.
- 4. Determination of In Situ dry density of soils using Core Cutter Method
- 5. To Perform Permeability Test.
- 6. To Perform Relative Density Test.
- 7. To Perform Unconfined Compression Test.
- 8. Determination of the Shear Strength Parameters of soil using Triaxial Test.
- 9. Extraction of Disturbed and Undisturbed Samples
- 10. To study about Standard Penetration Test.

SEMESTER 7

CE3701	Title: Health Safety & Environment Management	L T P C 4 0 0 4
Vargion No.	1.0	4 0 0 4
Version No. Course	Nil	
Prerequisites	TVII	
Objectives	To impart basic understanding of Health & Safety	
Expected	Students should be able to understand respiration and skin effects	
Outcome	Students should be able to understand safety analysis during drilling	
	Students should be able to evaluate management & impact of oil and gas	
	 Students should be able to determine remediation measure & prevention. 	
	Students should be able to understand HSE regulation	
Unit No.	Unit Title	No. of
CIII TO	Cint Title	hours
		(per Unit)
Unit I	Health Hazard	6
	ical, asphyxiation, respiration and skin effects. Effects of sour gases (H2 S and C	O) on human
	rosive material and atmosphere during sand control, fracturing and acidization operation	
Unit II	Safety Analysis	6
Operational risk in	Industry, production and handling of oil and Gas, fireHazard: safety in drilling. Manu	al. Gas
	on and suppression systems. Hazard and failure mode analysis: disaster and crisis ma	nagement.
Unit III	Environment Health and Safety	6
	is on air, water and soil pollution, impact of drilling and production operations, offsho	
	vironmental impact assessment. Waste treatment & Management methods, effluent w	ater treatment
	minated soil remediation.	1 2
Unit IV	Noise pollution	6
	remediation measure. Industrial Accident & prevention: Safety sampling, Accident &	ind Safety
	ements, Disaster Planning and control. Safety in offshore operations.	
Unit V	Detector	6
	etection and suppression, personal protection measures. Occupational Physiology: Re	espiratory and

CE3702	Title: Estimation and Costing	LTPC 4004					
Version No.	1.0						
Course	Nil						
Prerequisites							
Objectives	To know the importance of preparing the types of estimates under different coabout the rate analysis and bill preparations	nditions and to know					
Expected	Students should be able to understand the advantages of estimations						
Outcome • Students should be able to estimate the quantity of structures							
	 Students should be able to understand the specification and tenders 						
	 Students should be able to evaluate the quantity 						
	 Students should be able to present reports 						
Unit No.	Unit Title	No. of					
		hours (Per					
		Unit)					
Unit I	Introduction	6					
Calculations of qu	tes - Units of measurements; Methods of estimates - Advantages of estimates of brick work, RCC, PCC, Plastering, white washing, color washing at ops, rooms, residential building with flat roof.						
Unit II	Estimates of other Structures	6					
	tic tank, Soak pit, Sanitary and water supply installations (water supply pip	e line sewer line)					
works - aqueduct	•						
Unit III	Specifications and Tenders	6					
	e and cost indices for building material and labor. Schedule of rates; Ar Sources, Detailed and general specifications; Tenders; Contracts - Tents.						
Unit IV	Valuation	3					
	s of value engineering; Capitalized value; Depreciation; Escalation value of E Mortgage, Lease.	Building; Calculations					
Unit V	Report Preparation	3					
	port preparation - report on estimate of residential building, Culvert, Roa ons - Tube wells, Open wells.	ds; Water supply and

Design of Joints.	7 1 4 10 4 17 14										
Unit V	Evaluation and Strengthening of Existing Pavements:	3									
Pavement Failures - Failures	ures in Flexible Pavements, Failures in Rigid Pavements; Methods of Pa	avement Evaluation -									
	of Pavements, Evaluation of Pavement Surface Conditions; Streng										
	nd Design of Overlay Type and Pavement Materials over existing										
Pavements.											
Text Books	1. Khanna S.K. & Justo, C.E.G. "Highway Engineering", Nem	Chand & Bros.,									
	Roorkee.										
	2. Kadiyali L.R. & Lal, N.B. "Principles and Practice of High	way Engineering									
	Including expressways and Airport engineering", Khanna Publish	, , ,									
Reference Books	1. IRC: 85 – "Code of Practice for Accelerated Strength Testing										
Actor effect Books	ConcreteRoad and Air field Constructions", IRC, New Delhi.	, and Distinction of									
		abwaya" IDC Nam									
	2. IRC: 58– "Guidelines for the Design of Rigid Pavements for High	giiways, ikc, new									
	Delhi.										
	3.										

Mode of Evaluation	Internal and External Examinations

Course Outcome for CE3805

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use , for more than One)
CO1	Student should be able to understand the basic history of pavement.	2	Em
CO2	Student should be able to understand the materials used in construction of pavement	2	S
CO3	Student should be able to design the flexible pavements.	2	S
CO4	Student should be able to design the concrete pavements.	2	En
CO5	Student should be able to analyze the strength of pavements.	1	None

Course Outcomes	Program Outcomes (Course Articulation Matrix (Highly Mapped- 3, Moderate- 2, Low-1, Not related-0)												Program Specific Outcomes	
	PO1	PO2	PO3	PO4	PO5	PO6	PO7	PO8	PO9	PO10	PO11	PO12	PSO1	PSO2

CE3806	Title: Traffic Planning & Design	L T P C 300 3								
Version No.	1.0									
Course Prerequisites	Nil									
Objectives	To know the traffic flow characteristics, various traffic surveys.									
Expected Outcome	Student should be able to understand basics of traffic engineering	Į.								
_	• Student should be able to analyze the different traffic devices.									
	Student should be able to understand the necessity of traffic safety and level of									
	services.									
	• Student should be able to understand the fundamentals of uninterrupted traffic flow									
	theory.									
	Student should be able to understand the fundamentals of interruption	pted traffic flow								
	theory.									
Unit No.	Unit Title	No. of hours								
	Can't True	(Per Unit)								
Unit: 1	Introduction to Traffic Engineering	8								
	Engineering Properties of Traffic Engineering Elements, Road Vehicle									
Traffic Studies Volume	studies, Speed studies, Origin and destination studies and parking studies	lies								
Unit II	Traffic Control devices	8								
	ol devices, Principles of Intersection Design, Design of signalize	ų.								
	pordination, Traffic Regulations and Statistical methods	od dira diibi8iidii2od								
, 0										
Unit III	Traffic Safety and Level-of-service	8								
Accidents, Lighting, Ca	apacity and Level-of-service analysis									
Unit IV	Uninterrupted traffic Flow Theory	8								
Fundamentals of Trafficular flow models	c flow theory, Uninterrupted, Traffic flow including Macroscopic and	Microscopic Traffic								
Unit V	Interrupted traffic Flow Theory	8								
Fundamentals of Interr	upted Traffic Flow, Shockwave Analysis, Car following theory, Quet	uing Theory, Vehicle								
Text Books	cceptance, Simulation of Traffic Systems 1. Traffic and Highway Engineering 5th Edition by Nicholas J. Gar	har Lastar A Haal								
1 CXL DUUKS	2. Transport Engineering Handbook, 6th Edition, Institute of Transport									
	3. Kadiyali, L. R., Traffic Engineering and Transport Planning, Kha									
Reference Books	1. O'Flaherty C A, "Transport Planning and Traffic Engine	eering", Butterworth								
	Heinemann, Elsevier, Burlington, MA	Daine in Land C.T. CC								
	2. Mannering Fred L., Kilarski Walter P. and Washburn Scott S., Engineering and Traffic Analysis, Third Edition, Wiley	rinciples of Traffic								
	3. Roess, R. P., Prassas, E. S., and McShane, W. R., Traffic Engi	ineering 1th Edition								
	Prentice Hall	meering, till Eulifoll,								
	4. ChakrobortyPartha and Animesh Das, Principles of Transpo	ortation Engineering								
	Prentice Hall	- B8,
