Quantum University, Roorkee

Study & Evaluation Scheme Study Summary

Name of the Faculty	Faculty of Mechanical Engineering
Name of the School	Quantum School of Technology
Name of the Department	Department of Mechanical Engineering
Program Name	Master of Technology in Thermal Engineering
Duration	2 Years
Medium	English

Evaluation Scheme

True of Denous Internal End Consector Total (9/)											
Type of Papers	Internal	End Semester	Total (%)								
	Evaluation (%)										
	(%)										
Theory	40	60	100								
Practical/ Dissertations/Project	40	60	100								
Report/ Viva-Voce											
Internal Evaluation Com	ponents (Theor	y Papers)									
Sessional Examination I		50 Marks									
Sessional Examination II		50 Marks									
Assignment –I		25 Marks									
Assignment-II		25 Marks									
Attendance		50 Marks									
Internal Evaluation Comp	onents (Practio	cal Papers)									
Quiz One		25 Marks									
Quiz Two		25 Marks									
Quiz Three		25 Marks									
Lab Records/ Mini Project		75 Marks									
Attendance		50 Marks									
End Semester Evaluat	End Semester Evaluation (Practical Papers)										
ESE Quiz		30 Marks									
ESE Practical Examination		50 Marks									
Viva- Voce		20 Marks									

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Question Q1 to Q5 will be compulsory and each question will have 3 parts. Each part carries 10 marks each and the student may attempt any 2 parts.

Important Note:

1. The purpose of examination should be to assess the Course Outcomes (CO) that will

ultimately lead to attainment of Programme Specific Outcomes (PSOs). A question paper must assess the following aspects of learning: Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.

- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure - Master of Technology in Thermal Engineering

Introduction

Master of Technology in Thermal Engineering is a course involving studies on an advanced level of concepts of energy efficiency, renewable energy & environmental preservation, and their entwinement with classical energy technologies and recently discovered technologies. The course covers real-time fluid flow and heat transfer applications in Thermal Energy Systems, Cryogenic Engineering, Refrigeration & Air Conditioning, and other fields. Thermal engineering is a branch of mechanical engineering that studies the regulation of heating and cooling processes in enclosed spaces. It ensures to provide students with an effective learning experience with thought-provoking teaching pedagogy. The curriculum is highly demanding and thoughtfully designed to incorporate all the latest development in the field. The curriculum of post graduate program in thermal engineering aims at creating the right mindset which ensures the creation of innovative, thoughtful, and socially aware engineers. It allows establishing a solid understanding of research to continue professional development in thermal engineering. It allows applying for specialist roles at a renowned manufacturing company. Student will develop the ability to use their math, science, engineering, and technology expertise. Understand, analyse, create, and solve issues related to the application of technology in a variety of industrial contexts in great detail. It also entails developing, choosing, and implementing relevant approaches, resources, modern engineering, and information technology tools to tackle complex engineering problems.

We believe in the practical nature of the domain and focus on learning by doing it practically. Students will gain an ability to specify, fabricate, test, operate, validate and complete documentation of thermomechanical systems or processes. Students will gain an ability to apply the acquired software's skills for simulation in the controlled environment and provide viable solutions.

Towards enhancing employability and entrepreneurial ability of the postgraduates the Quantum University increase the practical content in the courses wherever necessary. The total number of credits in 4 semesters programme will be around 66 for all the programmes.

In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands.

Project

This course is spread across the semesters, from 3rd semester to fourth semester where student is required to do a project or field work or design/fabrication and test/simulate for a research problem.

B. Choice Based Credit System (CBCS)

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the M.Tech (Thermal Engineering) program:

Core competency: Students will acquire core competency in Thermal aspects of Mechanical Engineering and in its application areas.

Program/Discipline Specific Elective Course (DSEC):

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to improve post graduate students to develop critical thinking ability by way of solving problems/numerical using basic & advance knowledge and concepts of Thermal Engineering.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a postgraduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A postgraduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

C. Program Outcomes of M.Tech Thermal Engineering.

Program Outcome (POs) – M. Tech

PO-01	Engineering knowledge	Exhibit in-depth knowledge in engineering specialization.
PO-02	Problem analysis	Think critically and analyze complex engineering problems to make creative advances in theory and practice.
PO-03	Design/Developm ent Of Solutions	An ability to design solutions for engineering problems and to design a component, system, or process that meet the specified needs with appropriate consideration for the public health and safety, along with the cultural, societal, and environmental considerations.
PO-04	Conduct Investigations of Complex Problems	Use research methodologies, techniques and tools, and will contribute to the development of technological knowledge
PO-05	Modern tool usage	Apply appropriate techniques, modern engineering tools to perform modeling of complex engineering problems with knowing the limitations.

PO-06	The Engineer and society	Achieve professional success with an understanding and appreciation of ethical behaviour, social responsibility, and diversity, both as individuals and in team environments.
PO-07	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge for sustainable development to articulate a comprehensive world view that integrates diverse approaches to sustainability
PO-08	Communication	Communicate complex engineering problems with the engineering community and society, write and present technical reports effectively
PO-09	Ethics	Exhibit professional and intellectual integrity, ethics of research and scholarship and will realize the responsibility towards the community
PO-10	Individual and Team work	An ability to analyse the local and global impact of computing on individuals, organizations, and society.
PO-11	Project Management and Finance	Demonstrate knowledge and understanding of engineering and management principles and apply the same with due consideration to economical and financial factors.
PO-12	Life-long learning	Engage in life-long learning with a high level of enthusiasm and commitment to improve knowledge and competence continuously

Program Specific Outcomes (PSOs)

At the end of this programme, Post Graduates will be able to:

- **PSO 1:** Analyse the complex engineering problems by applying engineering knowledge in the area of thermal engineering systems.
- **PSO 2:** Provide engineering solutions to meet the specified needs with appropriate consideration for comfort, safety, social and environmental aspects.

Program Educational Objectives(PEOs)

In their careers, our post graduates will be able to:

- **PEO 1**: Analyze and solve thermal engineering problems using modern engineering tools in industry or in research.
- **PEO 2**: Play key role in collaborative multidisciplinary scientific research with due consideration to economical and financial factors for leading a successful career in industry or to pursue higher education or being an entrepreneur.
- **PEO 3**: Engage in life-long learning with professional code of conduct.

D. Pedagogy & Unique practices adopted:

""Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential

learning:

Mini projects: students are asked to do or given mini projects for developing an aptitude to critically think and find solutions for real world problems, learn working with other people, under deadlines and guidance.

Flip Presentations: Students are required to present on latest technology trends in mechanical engineering to enhance their ability to self learn and presentation skill along with developing their confidence level to face an audience.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, research tools etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners.

Induction program: Every year 3 weeks induction program is organized for 1st year students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Extra-curricular Activities: organizing & participation in extracurricular activities will be optional for postgraduate students to develop confidence & face audience boldly. It shapes out their leadership qualities along with planning & organizing skills. Students can undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning(A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning(A2 Assignment), workshops, Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/ initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

Board of Studies on		
Date of approval by the	11.06.2018	
Academic Council		

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to underrstand fundamental concepts of themal engineering	3	Em
CO2	Students should be able to understand the advanced properties of pure substance and able to apply different equations.	3	S
CO3	Students should able to understand the aplication of thermodynamics in real gas behaviour.	3	S
CO4	Students should able to apply the basic knowladge of thermodynaics to understand the statical themodynamics	3	S
CO5	Students should be able to understand chemical thermodynamics and able to analyse different reactions	3	em

ME4103	Title: Advanced Heat Transfer	L T P C 3 1 0 4
Version No.	1.0	3 1 0 4
Course Prerequisites	Nil	
Objectives	To develop the ability to use the heat transfer concepts for thermal anal	vsis and sizing of
	heat exchangers and to achieve an understanding of the basic concepts	
	processes.	1 0
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Introduction	7
	t Modes of heat transfer- Conduction- General heat conduction equation, I	
• •	fer in Cartesian coordinates, Finned surfaces-1-D Heat transfer with inte	rnal heat generation.
Unit II	Transient heat conduction	8
	eisler charts, Semi-infinite solid, Product solution- 2D, steady state heat	
	ansient heat conduction, Analytical solution- Finite Difference methods to	for Heat Conduction
	ady state and Unsteady heat conduction, Implicit and Explicit methods.	1
Unit III	Convection	8
	Hydrodynamic and Thermal boundary layer concepts-Equations of Motic	
	ransfer coefficient- Dimensional Analysis, Importance of Non, Dimensional	
	Momentum Transfer-External flows and integral methods for flow over	a flat plate-
Application of empirical rela		
	f Free convection-An Approximate Analysis of Laminar Free Convection	on Vertical Plate-
	ntal Plate, Cylinder and Sphere- Combined free and forced convection.	1 _
Unit IV	Boiling and condensation	5
	Nusselt's theory of film condensation on a vertical plate, Assumptions and	correlations of film
condensation for different ge		
Unit V	Radiation	8
	ethods of Determining View factors-Radiant heat exchange in Grey, North Additional Property of the Control of t	
	Absorbing media- Secular surface, gas radiation, Radiation from flames

ME4140	Title: Advanced Thermal Engineering Lab	L T P C 0 0 2 1					
		0 0 2 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	The lab is mainly intended to conduct experiments on various Thermal	Engineering					
devices to study the performance and its applications.							
List of Experiments							

- Study Compressibility factor measurement of different real gases.
- To calculate Dryness fraction estimation of steam.
- Performance analysis of two stage reciprocating compressor. Performance test and analysis of exhaust gases of an I.C. Engine.
- 2. 3. 4. 5. 6. Heat Balance sheet, Volumetric Efficiency and air fuel ratio estimation of an I.C. Engine.
- Performance analysis of Air conditioning unit.
- 7. 8. Performance analysis of heat pipe.
- Study of solar flat plate collector.

Mode of Evaluation	Internal and External Examinations
Recommendation by	24.03.2018
Board of Studies on	
Date of approval by the	11.06.2018
Academic Council	

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should able to understand intricacies of solar plate collector and behaviour of different real gas.	2	Em
CO2	students should able to evaluate the performance parameters of IC engine, heat pipe, AC unit and receprocating compressor	5	S
CO3	students should able to evaluate the dryness fraction of steam	5	S

ME4203	Title: Transit Refrigeration	LTPC
		3 0 0 3
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	To present a problem oriented in depth knowledge of Food Preservation	and Transport and
	address the underlying concepts and methods.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction	7
	icts, Mechanism of food spoilage critical microbial growth requirements	, Design for control
	of HACCP, Sanitation, Regulation and standards	
Unit II	Processing	8
	nd Transfer properties, Water content, Initial freezing temperature, Ice fra	
	, Food Processing techniques for Dairy products, Poultry, Meat, Fruits ar	nd Vegetables
Unit III	Freezing and Drying	7
	principles, Cold storage and freezers, Freezing drying limitations, Irra	
	d analytical methods in estimating Freezing, Thawing times, Energy co	onservation in food
industry.	CHO, D. H. A.	7
Unit IV	Cold Storage Design and Instrumentation	C : 1: 1
	, Building design, Specialized storage facility, Construction methods, Re	irigeration systems,
Unit V	ol and instrumentation, Fire protection, Inspection and maintenance Transport	7
	Refrigerated containers and trucks, Design features, Piping and Role of cr	voganies in fraezing
and transport	terrigerated containers and trucks, Design reactives, 1 iping and Role of Cr	yogenies in necznig
Text Books	1. Alan Rodes, Principles of Industrial Microbiology, Pregmon In	nternational Pub
TEAT BOOKS	2. Ibraham Dincer, Heat Transfer in Food Cooling Applications.

ME4206	Title: Refrigeration Machinery	LTPC								
		3 0 0 3								
Version No.	1.1									
Course Prerequisites	Nil									
Objectives	To master how refrigeration components and systems. To identify and explain various									
	system accessories and controls in refrigeration systems.									
Unit No.	Unit Title	No. of hours								
		(per Unit)								
Unit I	Refrigerant compressors	7								
	Reciprocating, Rotary, Scroll compressors, Open type compressors									
	ssors. Semi hermetic compressors - Construction, working and Energy	Efficiency aspects.								
Applications of each type.	-									
Unit II	Refrigeration system components	7								
	-Different types, capacity control, circuitry, Oil return, Oil separators- I									
	Receivers, Accumulators, Low pressure receivers, Air Washers, Spray									
Unit III	Hydronic systems	8								
	ater Systems, Multiple Fan Coil Units, Condensers - Multiple Conde									
Towers. System components, Expansion tank, Balancing valves, Pumping systems, Pump selection, Freeze prevention										
Unit IV	Appliances and accessories	7								
Special components for refr	geration, air Conditioning in Automobiles, Railway Wagons, Marine V	essels, Aircraft and								
Other Commercial Applicat	ions.									
Unit V	System accessories and controls	7								
Refrigerant Pumps, Cooling	Tower fans, Compressor Motor protection devices, Oil equalizing in m	ultiple evaporators.								
Different Defrosting and cap	pacity control methods and their implications.									
Text Books

ME4204	Title: Finite Element Analysis	L T P C 3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To gain a fundamental understanding of the finite element method for solv problems and to learn important concepts of variation form, minimum potentially, and method of weighted residuals.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction	8
with other methods, variation properties of stiffness matrix	concepts, historical back ground, application of FEM, general description, nal approach, Co-ordinates, basic element shapes, interpolation function. Ray, treatment of boundary conditions, solution of system of equations, shape for	yleigh- Ritz method, unctions.
Unit II	1 D Structural Analysis	8
Analysis of Trusses, Plane T Load vector, Problems analy		ns, stiffness matrix,
Unit III	2 D Structural Analysis	7
2-D problems ,CST, force terelement, Shape functions , N	rms, Stiffness matrix and load vector, boundary conditions, Isoparametric el fumerical Integration	ement quadrilateral
Unit IV	3 D Structural Analysis	6
3-D problems, Tetrahedran e	element, Jacobian matrix, Stiffness matrix.	
Unit V	Heat Conduction Analysis	7
Scalar field problems - 1-D I	Heat conduction, 1-D fin element, 2-D heat conduction Problems, Dynamic	considerations,
Dynamic equations- consiste	nt mass matrix-Eigen Values, Eigen Vector, Natural frequencies-mode shap	es-modal analysis.

ME4209	Title: Fire Dynamics Engineering	LTPC
		3 0 0 3
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	To understand initiation and propagation of a Fire along with technique	es of fire detection
	and suppression.	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Combustion Fundamentals	6
	istics of Fuels, Fuels Analysis - Proximate and Ultimate Analysis - Moist	
Calorific Value, Gross and N	let Calorific Values - Calorimetry - DuLong's Formula for CV Estimation	n
Unit II	Combustion Stoichiometry	8
	and Volume Basis – Excess Air Calculation – Fuel and Flue Gas Composi	
	ustion Processes - Stationary Flame - Surface or Flameless Combu	stion - Submerged
Combustion – Pulsating and	Slow Combustion Explosive Combustion.	
Unit III	Mechanism of Combustion	8
	- Ignition and Ignition Energy - Spontaneous Combustion - Flame Propa	
	ombustion – Flame Temperature – Theoretical, Adiabatic and Actual – Ig	
Limits of Inflammability. Th	ermo Chemistry - Equilibrium combustion products. Low temperature co	ombustion products
 High temperature combusti 	ion products	
Unit IV	Fire Dynamics	7
	y, buoyant plumes, interactions with surfaces, smoke spread, turbulent di	
formation and radiation effect	ets, toxic products; feedback to fuel; fire chemistry, nitrogen and halogen	thermochemistry.
Unit V	Fire Detection and Suppression	7
	onitoring systems, halogen and water mist suppression. Automatic spr	
	. Codes, standards and laws; case studies of real fires - buildings, fact	ories and godowns,
automobiles, buses, trains an	d aircraft, oil spills, forest fires, tents, slums, residential spaces.	
Text Books	1. D.D. Drysdale, An Introduction to Fire Dynamics, Wiley, New York	
Reference Books	1. J.W. Lyons, Fire, Scientific American Books	
	2. B. Karlsson, and J.G. Quintiere, Enclosure Fire Dynamics, CRC Pres	
	3. G. Cox, Combustion Fundamentals of Fire, Academic Press, London	<u> </u>
Mode of Evaluation	Internal and External Examinations	
Recommendation by	06.06.2019	
Board of Studies on		
Date of approval by the	13.07.2019	
Academic Council		

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to basic knowledge of Combustion Fundamentals of Fire Dynamics Engineering.	2	Em
CO2	Students should be able to understand the Combustion Stoichiometry, Combustion Processes, Surface or Flameless Combustion.	2	None
CO3	Students should be able to basic knowledge of Mechanism of Combustion and Thermo Chemistry.	3	None
CO4	Students should be able to basic principle Fire Dynamics Flames and fire spread theory.	2	None
CO5	Students should be able to acquired knowledge on real life problems and importance of life safety in building fire and method of evacuation.	2	S

ME4301	Title: Alternative Fuels	LTPC
WIE4301	Title. Atternative Fuels	3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To know about the types of alternative fuels and energy sources for IC	engines.
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction	7
Ignition quality, volatility, of efficiency, Fuel requirement in future.	ine. Study of various parameters related to properties of different types of calculations of Air-Fuel ratio, Calorific Value) as input and output in tea, Engine efficiency and Engine life). Sources of fossil fuel, scope of avairance.	erms of results (Fuel lability of fossil fuel
Unit II	Need for Alternative Fuels	7
emission in atmosphere. Gre	xhaust gas emission on environmental condition of earth, Pollution cre- tenhouse effect, Factors affecting greenhouse effect. Study of Global Car it calculations. Emission norms as per Bharat Standard up to BS - VI	bon Budget, Carbon
Unit III	Alcohol and Bio Diesel	7
alcohols in S.I. and C.I. eng Dual fuel systems. Base mat blended with vegetable oil, a	hanol, methods of its production. Properties of methanol and ethanol as ines, performance of blending methanol with gasoline. Emulsification of erials used for production of Bio Diesel, Process of separation of Bio Diesel, difference in performance of Engine.	f alcohol and diesel. eel. Properties Diesel
Unit IV	Hydrogen and Biogas	8
Transportation of hydrogen. car. Fuel Cells: Concept of f Introduction to Biogas system	fuel. Study Properties, Sources and methods of Production of Hyd Advantages of hydrogen (Liquid hydrogen) as fuel, Cost estimation. Liquid cells based on usage of Hydrogen and Methanol. Power rating and penting, Factors affecting biogas formation. Usage of Biogas in SI engine and	ayout of a hydrogen or formance. CI engine.
Unit V	Vegetable Oils, LPG and CNG	7
LPG and CNG: Properties o performance, emission, cost		racteristics, effect on
Text Books	 S.S. Thipse, Alternative Fuels: Concepts, Technologies and D Publishing House Zainul, Abdul, Alternative Fuels for CI Engines, Springer Pub 	•

ME4304	Title: Nuclear Engineering	LTPC
		3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To learn nuclear fuel cycles, characteristics, principles governing no	uclear fission chain
	reaction and fusion	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Nuclear reactions	7
	n - nuclides - radioactivity - decay chains - neutron reactions - the fission	
	r - design and construction of nuclear reactors - heat transfer techniques	in nuclear reactors -
reactor shielding		
Unit II	Reactor Materials	8
	cteristics of nuclear fuels - Uranium - production and purification of Uran	nium - conversion to
	ke Zirconium, Thorium – Berylium.	
Unit III	Reprocessing	8
Nuclear fuel cycles - spent fi	uel characteristics - role of solvent extraction in reprocessing - solvent ex	traction equipment.
Unit IV	Separation of reactor products	7
	- 'Fuel Element' dissolution - precipitation process - ion exchange - red	
chelation -U235 - Hexone -	TBP and thorax Processes - oxidative slaging and electro - refinng - Ison	topes - principles of
Isotope separation		
Unit V	Waste disposal and radiation protection	6
	fety control and pollution control and abatement - international convention	n on safety aspects -
radiation hazards prevention		
Text Books	1. Cacuci, Dan Gabriel, Nuclear Engineering Fundamentals, Springer
