Study & Evaluation Scheme Study Summary

Name of the Faculty	Faculty of Health Sciences
Name of the School	Quantum School of Health Sciences
Name of the Department	Department of Applied Medical sciences
Program Name	Master of Science in Nutrition and Dietetics
Duration	2Years
Medium	English

Evaluation Scheme

	Evaluanoi	i Scheme	
Type of Papers	Internal Evaluation (%)	End Semester Evaluation (%)	Total (%)
Theory	40	60	100
Practical/			
Dissertations/Project	40	60	100
Report/ Viva-Voce			
Internal E	valuation Compon	ents (Theory Papers)	
Mid Semester		60 Marks	
Examination			
Assignment –I		30 Marks	
Assignment-II		30 Marks	
Attendance		30 Marks	
Internal Ev	aluation Compone	nts (Practical Papers)	
Quiz One		30 Marks	
Quiz Two		30 Marks	
Quiz Three		30 Marks	
Lab Records/ Mini		30 Marks	
Project			
Attendance		30 Marks	
End Ser	nester Evaluation	(Practical Papers)	
ESE Quiz		40 Marks	
ESE Practical		40 Marks	
Examination			
Viva- Voce		20 Marks	

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 3 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Parts a), c) and c) of Q1 to Q5 Carry 10 marks each and the student may attempt any 2 parts.

Important Note:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of ProgrammeOutcomes (PO). A question paper must assess the following aspects of learning Planned for specific course that is Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluate through module available on ERP for time and access management of the class.

Program Structure – Master of Science in Nutrition and Dietetics

Introduction

Masters of Science in Nutrition & Dietetics syllabus is broad and multidisciplinary consists of various courses in Human Physiology, Nutritional biochemistry, Food Science, Fundamentals of Foods & Nutrition, Food Microbiology, Dietetics, Sports Nutrition, Food technology, Food Preservation & Bakery etc.

The subjects are designed in such a way that students grasp all the knowledge related to foods and nutrition science. Towards enhancing employability and entrepreneurial ability of the graduates the Quantum University increase the practical content in the courses wherever necessary. The total number of credit hours in 4 semesters including Student READY programmed will range is 98. In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands and needs. The Quantum University offering the specializations like majoring in Food science, Sports Nutrition, Nutraceuticals, Research etc.

HOSPITAL INTERNSHIP

This is offered in 4th Semester to the students to gain the practical exposure of the work that is carried out in hospital like formation of RT Feed, preparation of Therapeutic Diets, Counseling sessions in OPD patients and Counseling of critical patients etc.

The students would be required to record their observations in the hospital on daily basis and will prepare their internship report based on these observations and will do 1-2 case studies also.

FOOD INDUSTRY INTERNSHIP

This is offered in 4th Semester to the students to gain the practical exposure of the work that is carried out in food industry as food analyzer, sensory evaluator, processing techniques, Food product development etc.

The students would be required to record their observations in the food industry and will prepare their internship report based on the observations in the food industry.

DISSERTATION

This is offered in 4th Semester to the students to gain the practical exposure of the work related to research.

Constitutes a original research project that helps to obtain the masters degree.

B. Choice Based Credit System (CBCS)

M.Sc. N& D V 2021

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the M.Sc. Nutrition and dietetics program:

Core competency: Students will acquire core competency in M.Sc. Nutrition and dietetics Studies and in allied subject areas.

Program/Discipline Specific Elective Course (DSEC):

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic &advance knowledge and concepts of M.Sc. Nutrition and dietetics Studies.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a graduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A graduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/ journals for personal academic growth as well as for increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skills will definitely develop acumen to perform well during the recruitment process of any premier organization and will have the desired confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world. There shall be four courses of Aptitude in Semester I, II, III&IV semesters and two courses of Soft Skills in III&IV Semesters and will carry no credit, however, it will be compulsory for every student to pass these courses with minimum

45% marks to be eligible for the certificate. These marks will not be included in the calculation of CGPI. Students have to specifically be registered in the specific course of the respective semesters.

Skill Enhancement Course: This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Generic/Open Elective Course (OE): Open Elective is an interdisciplinary additional subject that is compulsory in a program. The score of Open Elective is counted in the overall aggregate marks under Choice Based Credit System (CBCS). Each Open Elective paper will be of 3 Credits in II, III and IV semesters. Each student has to take Open/Generic Electives from department other than the parent department. Core / Discipline Specific Electives will not be offered as Open Electives.

Non CGPA Audit Course(**NCAC**): This is a compulsory course but not included in CGPA calculations and will be of 2 credits.

C. Program Outcomes of Master of Science in Nutrition and Dietetics

PO-02 Implement Strategies: Implement strategies for food access, procurement, preparation, and safety for individuals, families, and communities. PO-03 Scientific Reasoning: Evaluate nutrition information based on scientific reasoning for clinical, community, and food service application. PO-05 Technical Skills: Apply technical skills, knowledge of health behavior, clinical judgment, and decision-making skills when assessing and evaluating the nutrition intervention. PO-06 Management Skills: Perform food management functions in business, health-care, community, and institutional arenas. PO-07 Nutritional Ethics: Practice state-of-the-art nutrition care in collaboration with other healthcare providers in interdisciplinary settings within the bounds of ethical, legal, and professional practice standards. PO-08 Communicati on: Provide nutrition counseling and education to individuals, groups, and communities throughout the lifespan using a variety of communication strategies. PO-10 Competence: Competence in the skills of assessment, planning, management and evaluation of food service, nutrition and dietetic services in institutional food, community nutrition, and clinical dietetics settings. PO-11 Life-long learning Students will utilize advanced principles of health literacy, including critical thinking skills, literature searches, data collection and interpretation, necessary for the implementation of food and nutrition services in professional settings. PO-12	Research and Analyze:	Provide culturally competent nutrition services for individuals and communities. Accurately interpret data and research literature to
	J	solve complex problems and analyze the environmental dimensions of issues facing professionals.

Program Specific Outcomes (PSO's)

- **PSO1:** Understanding, critically assessing and knowing how to use and apply information sources related to nutrition, food, lifestyle and health.
- **PSO 2:** Providing basic training of nutritional science and information about food into practical dietary advice.
- **PSO 3:** Understanding the importance and limitations of scientific thinking in the fields of health and nutrition.
- **PSO 4:** Apply knowledge in the field of personalized nutrition with reference to nutrigenetics and Nutrigenomics.

Program Educational Outcomes(PEO's)

- **PEO1:**To be well familiar with the concepts of Nutrition & Dietetics for leading a successful career in hospital industry or as entrepreneur or to pursue higher education.
- **PEO2:**To develop applied-commercial skills for providing effective solutions to complex problems using domain knowledge of Nutrition & Dietetics.
- **PEO3:**To instill lifelong learning approach towards constantly evolving nutritional knowledge with innovative and ethical mindset.

F. Pedagogy & Unique practices adopted:

"Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" online or face-to-face. They alter the power ratios in teaching and learning relationships between students and educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the

design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual

share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video Based Learning (VBL)& Learning through Movies (LTM): These days technology has taken a front seat and classrooms are well equipped with equipment and gadgets. Video-based learning has become an indispensable part of learning. Similarly, students can learn various concepts through movies. In fact, many teachers give examples from movies during their discourses. Making students learn few important theoretical concepts through VBL & LTM is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL& LTM, wherever possible.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

Industrial Visits: Industrial visit are essential to give students hand-on exposure and experience of how things and processes work in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for a report of such a visit relating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects /course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programmed.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) Marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) &Extra Mural Lectures (EMPL): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programmed on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students.

Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners?

Induction program: Every year 3 weeks induction program is organized for 1st year students and senior students to make them, familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: Organizing& participation in extracurricular activities will be mandatory to help students develop confidence & face audience boldly. It brings out their leadership qualities along with planning & organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps themp build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning(A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning(A2 Assignment), workshops, Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One

faculty would be the coordinator of the student clubs & students would be the members with different responsibility. *Capability Enhancement & Development Schemes:* The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/ initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

ND4240	Title:BiochemicalFoodAnalysisandInstrumentationLab	L T P C 0 0 3 2
VersionNo.	1.0	
CoursePrerequisites	NIL	
Objectives	To impart fundamental knowledge of biochemical analysis of ofdifferentinstruments.	foods with the help
ExpectedOutcome	The students will be able to learn how the nutrients are checked from the food.	ed and separated
	ListofExperimen	
	ts	

- 1. Estimation of moisture content and titrable acidity of food products.
- 2. Testsforcarbohydrates:
 - (i) Estimation of soluble and in soluble as hontent
 - (ii) Estimation of dietary fibre
- 3. Testsforproteins:
 - (i) Quantitative estimation of proteins by Kjeldhal's Biuret method
 - (ii)Separation of amino acids by paper chromatography.
 - (iii)Isolation and estimation of Casein from milk.
 - (iv)Demonstrationofproteinseparationbygel electrophoresis.
- 4. TestsforFats:
 - (i) Estimation of free fattyacids
 - (ii) Determination of a cidan diodine value
 - (iii) Determination of RM value
- 5. TestsforVitamins&Minerals:
 - (i) Estimationofcalcium, phosphorous and iron
 - (ii) EstimationofvitaminsB1,B2andascorbic acid
- 6. Isolationand estimation of phyticacid.
- 7. Isolationand estimation of trypsininhibitors activity.

ModeofEvaluation	InternalandExternalExaminations

Semester 3

ND4301	Title: Advanced Food Science	LTPC
		4 0 0 4
Version No.	1.0	•
Course Prerequisites	NIL	
Objectives	To provide an overview for different disciplines of food science.	
Expected Outcome	Students will learn about science behind different foods and how it can help in getting different nutrients as well as learn about processing and preservation principles.	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Technology of Cereals, Legumes & Oils	9

Nutritional importance of cereals, legumes and oilseeds. Introduction to Wheat: Structure, types/varieties, harvesting, physical &chempical properties, composition and commercial value. Introduction to other cereals and millets: Rice, maize, oats, rye, corn, pearl millet; their nutritional importance and commercial value (Puffed rice, Rice flakes, parboiling of rice, extruded and fortified rice). Milling of wheat: Roller milling process, flour grade, flour treatments (bleaching, maturing), flour for various purposes, Products and By-products.

Introduction to Baking technology: Types of bakery products, nutritional quality and safety of products, pertinent standards & regulations. Bread, cakes, biscuits /crackers: Role of ingredients & processes, equipment used, product quality characteristics, scoring of quality parameters, faults and corrective measures. Breakfast cereals, macaroni products and malt. Production and quality of breakfast cereals and macaroni products. Effect of cooking and steeping on legumes. Classification of oilseeds and factors affecting the nutrient availability of oilseeds. Extraction of oilseeds.

Unit II Technology of Meat, Fish, Poultry, Egg and their products 10

Meat: Composition, variety, pre-slaughter handling, slaughtering and related practices, hygiene and sanitation practices of slaughter houses, grading, ageing, curing, smoking and tenderizing of meat, meat pigments and colour changes and methods of preservation for value addition and concerns of antibiotic residues.

Poultry: Production considerations, Processing plant operations (slaughter, bleeding, scalding, defeathering, eviscerating, chilling and packaging), tenderness and storage.

Eggs: Composition, quality factors, storage, bacterial infection and pasteurization, freezing, drying and egg substitutes. Fish: Composition, on-board handling & preservation, drying and dehydration, curing, smoking, marinades, fermented products, canning, Modified Atmosphere Packaging, and quality factors.

Unit III Technology Of Milk & Milk Products 10

Introduction to market milk: Indian standards, Composition, factors affecting composition of milk, physico-chemical properties of milk and its constituents.

Milk processing: Clean milk practices, buying and collection, platform tests, pre-heating, filtration, clarification, standardization, bactofugation, homogenization, pasteurization, cooling, packaging and storage. Cleaning and sanitization of dairy equipment including CIP and COP. Processing of toned and double milk.

Milk products (Cream, butter, ice cream, curd, cheese, khoa and ghee)-Introduction, definition, classification, methods of manufacture, quality aspects

Unit IV Technology Of Fruits & Vegetables and their Products 10

Classification of fruits and vegetables, general composition, climacteric and non climacteric fruits, enzymatic browning and its prevention. Post-harvest changes and management of fruits and vegetables- Climacteric rise, horticultural maturity, physiological maturity, maturity indices and process of ripening- physiological changes, physical and chemical changes. Causes of post-harvest losses, farm heat, measures to reduce post –harvest losses in F & V, Controlled atmosphere storage, modified atmosphere storage, ,zero energy cool chambers.

Preservation of fruits and vegetable

Canning: Selection of fruits and vegetables, process of canning, factors affecting the process- time and temperature, containers of packing, lacquering, syrups and brines for canning, spoilage in canned foods.

Fruit Beverages: Introduction, Processing of fruit juices (selection, juice extraction, desecration, straining, filtration and clarification), preservation of fruit juices (pasteurization, chemically preserved with sugars, freezing, drying, tetra-packing, carbonation), processing of squashes.

Jams, jellies and marmalades: Introduction, Jam: Constituents, selection of fruits, processing & technology, Jelly: Essential constituents (Role of pectin, ratio). Theory of jelly formation and defects in jelly.

Pickles, chutneys and sauces: Processing, Types, role of ingredients, causes of spoilage in pickling.

Tomato products: Selection of tomatoes, pulping & processing of tomato juice, tomato puree, paste, ketchup, sauce and soup.

Unit V Processing Techniques 9
Processing and preservation by heat:-Principle, theory and effect of blanching, pasteurization, sterilization, UHT, canning,

extrusion cooking and frying on food.

Processing and preservation by low temperature:-Principle, theory and effect of refrigeration, chilling, freezing, freeze-drying

(lypholization) and freeze-concentration on food.

Processing and preservation by non-thermal technologies:-Principle, theory and effect of irradiation, high pressure, pulsed

electric field and other innovative technologies on food Processing and preservation by other method:-Principle, theory and effect on food of drying, osmotic dehydration,

Processing and preservation by other method:-Principle, theory and effect on food of drying, osmotic dehydration, concentration, evaporation and distillation, Hurdle technology, use of chemicals and biological methods of food preservation.

ND4340	Title: Advanced Food Science Lab	L 0	T 0	P 3	C 2					
Version No.	1.0									
Course Prerequisites	NIL									
Objectives	To provide an overview of food science and processing techniques									
Expected Outcome	Students will gain the practical knowledge of different processing aspects of foods.									
Experiment No.	List of Experiments									

- 1. Evaluation of food grains for their physical characteristics.
- 2. To prepare jam & jelly and TSS measuring by Refractometer.
- 3. To prepare tomato ketchup & sauce and TSS measuring by Refractometer.
- 4. Evaluation of egg quality.
- 5. Extraction and estimation of gluten from cereals.
- 6. Assessment of milk quality by microbiological and platform testing.
- 7. To determine the effect of various treatments and prolonged cooking time on the texture and pigments present in different fruits and vegetables.
- 8. To determine the best method of combining ingredients in preparation of cream of tomato soup.
- 9. To observe the effect of different added ingredients on the foaming quality and stability of egg white.
- 10. To study the effect of soaking duration, germination and light on increase in weight, length as well as texture upon cooking for specific length time of different pulses and legumes.
- 11. To assess the browning reaction of fruits and vegetables and its prevention.
- 12. To analyze different properties of packaging material.

ND4217	Title: Food Processing Technology	LTPC							
ND4217	Titte. Food Frocessing Technology	3003							
Version No.	1.0								
Course	NIL								
Prerequisites									
Objectives	To gain in depth knowledge of technological aspects involved in processing cereals, bakery products, meat, fish, poultry and eggs.	g of							
Expected Outcome	Understand the basic concepts of properties of foods and basic food engined Acquire the knowledge of various unit operations in food processing technologian the knowledge of food packaging and its interaction with food produc	ology.							
Unit No.	Unit Title	No. of hours (per Unit)							
Unit I	Introduction to Baking Technology	6							
Types of bakery products, nutritional quality and safety of products, pertinent standards & regulations. Bread, cakes, biscuits /crackers: Role of ingredients & processes, equipment used, product quality characteristics, scoring of quality parameters, faults and corrective measures. Breakfast cereals, macaroni products and malt. Production and quality of breakfast cereals and macaroni products									
Unit II	Respiratory and Excretory System Technology of meat, fish, poultry,egg and their products	8							
Unit operations in food processing: Cleaning, sorting, grading, peeling, Size reduction, mixing and forming,									
Separation techniques, Process Plant design-Meat: Composition, variety, pre-slaughter handling, slaughtering and									
related practices, hy	giene and sanitation practices of slaughter houses, grading, ageing, c	uring, smoking and							
tenderizing of meat, r	neat pigments and colour changes and methods of preservation for value a	ddition and concerns							
of antibiotic residues.	Poultry: Production considerations, Processing plant operations (slaughter	r, bleeding, scalding,							
	rating, chilling and packaging), tenderness and storage. Eggs: Composit								
	ection and pasteurization, freezing, drying and egg substitutes. Fish: Co								
_	on, drying and dehydration, curing, smoking, marinades, fermented product	-							
	g, and quality factors.	,							
Unit III	Introduction to Fruits and Vegetables	6							
Classification, general composition, enzymatic browning and its prevention. Post- harvest changes and management. Climacteric rise, horticultural maturity, physiological maturity, maturity indices and process of ripening- post-harvest losses, farm heat, measures to reduce post –harvest losses in F & V, Controlled atmosphere storage, zero energy cool chambers.									
Unit IV	Milk and Milk products	8							
Introduction to marke	et milk: Indian standards, Composition, factors affecting composition of m	ilk, physico-chemical							
properties of milk and	d its constituents. Milk processing: Clean milk practices, buying and colle	ection, platform tests,							
pre-heating, filtration,	clarification, standardization, bactofugation, homogenization, pasteurizatio	n, cooling, packaging							
and storage. Cleaning and sanitization of dairy equipment including CIP and COP. Milk products (Cream, butter, ice									
cream, curd, cheese, k	hoa and ghee)-Introduction, definition, classification, methods of manufacture	ure, quality aspects.							
Unit V	Preservation of Fruits and Vegetables 8								

Canning spoilage in canned foods. Fruit Beverages: Introduction, Processing of fruit juices, preservation of fruit juices, processing of squashes. Jams, jellies and marmalades: Introduction, Jam: Constituents, selection of fruits, processing & technology, Jelly: Essential constituents (Role of pectin, ratio), Theory of jelly formation and defects in jelly. Pickles, chutneys and sauces: Processing, Types, role of ingredients, causes of spoilage in pickling.

ND4319	Title: Nutrition Anthropology	LTPC 3003
Version No.	1.0	1
Course Prerequisites	NIL	
Objectives	To provide an overview of food anthropology.	
Expected Outcome	 Students should be able to learn about the research tools used in anthropology. Students should be able to learn about anthropology and its relevance. Students should be able to learn about cultural interpretation of Malnutrition and Rural Urban and its differences. Students should be able to learn about comparing rural vs urban differences in anthropology. Students should be able to learn about applications of Operations Research in anthropology. 	
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Research Tools In Anthropology	9

Research tools in anthropology for formulation of research and programme design: Focus GroupDiscussion. Various Types ofinterviews Observationmethods

Research tools in anthropology for formulation of research and programme design: Participatory Research methods. Triangulation of methods. Steps for ensuring effective planning and use of these methods. Examples of recent studies relevant to above topics

Unit II **Introduction to Anthropology & its Relevance** 10

Introduction to Anthropology and Its Relevance to Nutrition

Definition and Application of the Discipline of Anthropology as applied to:

Health and Disease, Nutrition and Nutritional status, Direct and Indirect parameters of nutritional/health assessment used in community surveys, Emic vs Etic Perspective

Factors Affecting Food choices and household level practices; Ecological and Geographical, Poverty, economic status, Sociol cultural; education, ethnic and religious factors. Sensory Qualities of Foods and culture, Gender Discrimination, Intra Household Distribution of Food

Unit III 10 **Cultural Interpretation of Malnutrition and Rural Urban differences**

Cultural Interpretation of Malnutrition and Rural Urban differences

Community beliefs about cause prevention and treatment of under nutrition and micro nutrient deficiencies (PEM,IDA, VAD, IDD) in children and women in developed and developing countries. Ethno-physiology: cultural perceptions of body physiology in different stages of the life cycle (child, adolescent, adult) and its impact on home level nutrition and health care.

Comparing rural vs urban differences 9 **Unit IV**

Comparing rural vs urban differences as regards:

Time and activity patterns; workload of men and women and its impact on food intake and nutritional status (especially vulnerable groups). Health care seeking behaviors – treatment ofillness. Complementary feeding and breast feeding practices; family support Unit V **Application of Operations Research**

Application of Operations Research (Qualitative: Participatory) to Strengthen Interventions for Nutritional improvements

Experiences in use of qualitative and participatory research approaches in India and other countries for: Interdisciplinary understanding of nutrition-health issues, Rapid Rural Appraisals and Program Design, Experiences in use of qualitative and participatory research approaches in India and other countries for: Urban malnutrition control in urban health systems, Women's reproductive health and related problems like anemia
