Study & Evaluation Scheme Study Summary

Name of the Faculty	Faculty of Technology
Name of the School	Quantum School of Technology
Name of the Department	Department of Civil Engineering
Program Name	Master of Technology in Structural Engineering
Duration	2 Years
Medium	English

Evaluation Scheme

Type of Papers	Internal Evaluation (%)	End Semester Evaluation (%)	Total (%)				
Theory	40	60	100				
Practical/ Dissertations/Project Report/ Viva-Voce	40	60	100				
Internal Evaluation Cor	nponents (Theory	Papers)					
Mid Semester Examination	60 N	Marks					
Assignment –I	30 N	Marks					
Assignment-II	30 N	Marks					
Attendance	30 N	Marks					
Internal Evaluation Com	ponents (Practica	l Papers)					
Quiz One	30 N	Marks					
Quiz Two	30 N	Marks					
Quiz Three	30 N	Marks					
Lab Records/ Mini Project	30 N	Marks					
Attendance	30 N	Marks					
End Semester Evalua	tion (Practical Pa	ipers)					
ESE Quiz	40 N	Marks					
ESE Practical Examination (write- up) 20 Marks							
Viva- Voce							
Practical performance	20 N	Marks					

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Parts a) and b) of question Q1 to Q5 will be compulsory and each part carries 2 marks. Parts c), d) and e) of Q1 to Q5 Carry 8 marks each and the student may attempt any 2 parts.

Important Note:

- 1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Specific Outcomes (PSOs). A question paper must assess the following aspects of learning: Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.
- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure – Master of Technology in Structural Engineering Introduction

Master of Technology in Structural engineering syllabus is broad and multidisciplinary consists of various courses in Structural Engineering, Environmental Engineering, Geotechnical Engineering, Transportation Engineering, Construction Engineering, Urban and Community Planning apart from supporting courses in Basic Sciences, Humanities, and Agricultural Engineering.

The Master of Technology in Structural Engineering subjects are designed in such a way that students grasp all the knowledge related to Structural Engineering. Towards enhancing employability and entrepreneurial ability of the graduates the Quantum University increase the practical content in the courses wherever necessary.

In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands

Curriculum (2022-24) Version 2022.01

B. Choice Based Credit System (CBCS)

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the M. Tech Structural Engineering program:

Core competency: Students will acquire core competency in M. Tech Structural Engineering and in allied subject areas.

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to graduate students to develop critical thinking ability by way of solving problems/numerical using basic& advance knowledge and concepts of civil engineering.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a graduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A graduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

Value Added Course (VAC): A value added audit course is a non-credit course which is basically meant to enhance general ability of students in areas like soft skills, quantitative aptitude and reasoning ability - required for the overall development of a student and at the same time crucial for industry/corporate demands and requirements. The student possessing these skills will definitely develop acumen to perform well during the recruitment process of any premier organization and will have the desired confidence to face the interview. Moreover, these skills are also essential in day-to-day life of the corporate world. The aim is to nurture every student for making effective communication, developing aptitude and a general reasoning ability for a better performance, as desired in corporate world.

Skill Enhancement Course: This course may be chosen from a pool of courses designed to provide value-based and/or skill-based knowledge.

Program Course (PC): This is a compulsory course but audit that does not have any choice and may be of 3 credits.

C. Program Outcomes of M. Tech Structural Engineering

Program Outcomes (POs)

The curriculum and syllabus have been structured in such a way that each of the courses meets one or more of these outcomes. Program outcomes describe what students are expected to know and be able to do by the time of graduation. These relate to the skills, knowledge and behaviors that students acquire as they progress through the program. Further each course in the program spells out clear course outcomes (COs) which are mapped to the program outcomes.

Engineering Post Graduate will be able to:

gineering	ineering Post Graduate will be able to:							
		Program: M. Tech-Structural Engineering						
PO-01	Engineering knowledge	Exhibit in-depth knowledge in engineering specialization.						
PO-02	Problem analysis	Think critically and analyze complex engineering problems to make creative advances in theory and practice.						
PO-03	Design/Developme nt Of Solutions	An ability to design solutions for engineering problems and to design a component, system, or process that meet the specified needs with appropriate consideration for the public health and safety, along with the cultural, societal, and environmental considerations.						
PO-04	Conduct Investigations of Complex Problems	Use research methodologies, techniques and tools, and will contribute to the development of technological knowledge						
PO-05	Modern tool usage	Apply appropriate techniques, modern engineering tools to perform modeling of complex engineering problems with knowing the limitations.						
PO-06	The Engineer and society	Achieve professional success with an understanding and appreciation of ethical behavior, social responsibility, and diversity, both as individuals and in team environments.						
PO-07	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge for sustainable development to articulate a comprehensive world view that integrates diverse approaches to sustainability						
PO-08	Communication	Communicate complex engineering problems with the engineering community and society, write and present technical reports effectively						
PO-09	Ethics	Exhibit professional and intellectual integrity, ethics of research and scholarship and will realize the responsibility towards the community						
PO-10	Individual and Team work	An ability to analyses the local and global impact of computing on individuals, organizations, and society.						
PO-11	Project Management and Finance	Demonstrate knowledge and understanding of engineering and management principles and apply the same with due consideration to economic and financial factors.						
PO-12	Life-long learning	Engage in life-long learning with a high level of enthusiasm and commitment to improve knowledge and competence continuously						

Program Specific Outcomes (PSOs)

At the end of this programme, Post Graduates will be able to:

PSO 1: Analyze the complex engineering problems by applying engineering knowledge in the area of Structural Engineering **PSO 2:** Provide engineering solutions to meet the specified needs with appropriate consideration for comfort, safety, social and environmental aspects.

Program Educational Objectives (PEOs)

In their careers, our post graduates will be able to:

PEO 1: Analyze and solve Structural Engineering problems using modern engineering tools in industry or in research.

PEO 2: Play key role in collaborative multidisciplinary scientific research with due consideration to economic and financial factors for leading a successful career in industry or to pursue higher education or being an entrepreneur.

PEO 3: Engage in life-long learning with professional code of conduct.

F. Pedagogy & Unique practices adopted:

"Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Role Play & Simulation: Role- play and simulation are forms of experiential learning. Learners take on different roles, assuming a profile of a character or personality, and interact and participate in diverse and complex learning settings. Role-play and simulation function as learning tools for teams and groups or individuals as they "play" online or face-to-face. They alter the power ratios in teaching and learning relationships between students and educators, as students learn through their explorations and the viewpoints of the character or personality they are articulating in the environment. This student-centered space can enable learner-oriented assessment, where the design of the task is created for active student learning. Therefore, role-play& simulation exercises such as virtual share trading, marketing simulation etc. are being promoted for the practical-based experiential learning of our students.

Video Based Learning (VBL) & Learning through Movies (LTM): These days technology has taken a front seat and classrooms are well equipped with equipment and gadgets. Video-based learning has become an indispensable part of learning. Similarly, students can learn various concepts through movies. In fact, many teachers give examples from movies during their discourses. Making students learn few important theoretical concepts through VBL & LTM is a good idea and method. The learning becomes really interesting and easy as videos add life to concepts and make the learning engaging and effective. Therefore, our institute is promoting VBL & LTM, wherever possible.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

Industrial Visits: Industrial visit are essential to give students hand-on exposure and experience of how things and processes work in industries. Our institute organizes such visits to enhance students' exposure to practical learning and work out for a report of such a visit relating to their specific topic, course or even domain.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) Marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, SAP, Advanced excel training etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based insight to the students. Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Competitive exam preparation: Students are provided with one class in every week for GATE/ Competitive exams preparation.

Extra-curricular Activities: Organizing & participation in extracurricular activities will be mandatory to help students develop confidence & face audience boldly. It brings out their leadership qualities along with planning & organizing skills. Students undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning (A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning (A2 Assignment), workshops, and Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

Detailed Syllabus (Semester wise /course wise)

SEMESTER 1

	SEMESTER I							
CE4101	Title: Structural Analysis- A Matrix Approach	LTPC 3 1 0 4						
Version No.	1.0							
Course								
Prerequisites	Nil							
Objectives	Analysis a structure by more convenient method							
Expected Outcome	Students will be able to solve complex problems with different end co	nditions.						
Unit No.	Unit Title	No. of hours (per Unit)						
Unit I	Matrix Algebra and Indeterminacy	8						
equations. Degree of fre Stiffness and flexibility displacements.	nethods - banded and semi banded matrices, Algorithms for solution of edom - Static indeterminacy and kinematic indeterminacy and their dematrices. Solution of linear simultaneous equations with and without p	termination. rescribed						
Unit II	Introduction to Matrix Methods of Analysis	7						
	Assembly of stiffness matrix from element stiffness matrix - Compute atrix - Flexibility matrices. Method of analysis using stiffness and flexibility							
Unit III	Analysis of Continuous Beams	7						
Analysis for continuous Method and flexibility n	beams of two and three spans with different end conditions by using S	tiffness						
Unit IV	Analysis of Two Dimensional Portal Frames	7						
stiffness and flexibility is bending moment diagram	method of analysis of 2D portal frames with different end conditions-p	lotting of						
Unit V	Analysis of Two-Dimensional Pin jointed Trusses	7						
Computation of joint dis	splacement and member forces by stiffness and flexibility method							
Text Books	 Pundit and Gupta, "Structural Analysis", McGraw Hill C.S. Reddy, "Structural Analysis" McGraw Hill 							
Reference Books								
Mode of Evaluation	Internal and External Examinations							
Recommendation by Board of Studies on	28-05-2022							
Date of approval by the Academic	20-10-2022							
Council								

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use , for more than One)
CO1	Students will be able to analyze the concept of Matrix Methods of Analysis	2	Em
CO2	Students will be able to analyze the Continuous Beams using Stiffness method and flexibility method.	2	S
CO3	Students will be able to analyze Two Dimensional Portal Frames with different end conditions-plotting of bending moment diagrams	2	S
CO4	Students will be able to analyze Two-Dimensional Pin jointed Trusses by stiffness and flexibility method.	2	En
CO5	Students will be able to analyze the concept of Matrix Methods of Analysis	1	None

CE4104	Title: Bridge Design	LTPC
		3104
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	To identify the different types of bridges: arch, suspension, truss, be and cable stayed. Discover how the different types of bridges modifications can be made to the bridge to increase its strength.	fail and what
Expected Outcome	The course will impart sufficient knowledge necessary to design brid	lge.
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Introduction and Investigation for Bridges	8
	Classification - Need for investigation - Bridge site - Data collection r waterway - economical span - scour depth - traffic projection - choi	
Unit II	Load on Bridges	7
	RC) bridge codes - dimensions - dead and live loads - impact effect - linal and centrifugal forces - hydraulic forces - earth pressure – tempe	
Unit III	Slab and T- Beam Bridges	7
Design of slab bridges -	skew slab culverts - box culverts. T - beam bridges - Pigeaud curves lry Jaegar method - analysis and design of T - beam bridges.	_
Unit IV	Long Span Bridges	7
Hollow girder bridges - arch bridges - bow string	balanced cantilever bridges - continuous girder bridges - rigid frame by girder bridge, .Prestressed concrete bridges - composite prestressed on of precast girders - continuous construction - recent trends, Cable S	oridges - concrete
Unit V	Bearings and Sub-Structure	7
	lab, Design of piers - abutments - trestles, Joints - expansion joints	· · · · · · · · · · · · · · · · · · ·
Text Books	Johnson Victor. D, "Essentials of Bridge Engineering", Oxford Publishing Co. Pvt. Ltd.New Delhi,

CE4105	Title: Finite Element Analysis	LTPC
CE-103	Title. Finite Element Analysis	3 0 0 3
Version No.	1.0	2 0 0 2
Course Prerequisites	Nil	
Objectives	Analysis of complex structures	
Expected Outcome	After this course, student is expected to analyze complex structures in	two and
	three dimensions.	
Unit No.	Unit Title	No. of
		hours (per
		Unit)
Unit I	Introduction	8
	ty, introduction to stiffness method- Element approach for the analyse	s of beams,
trusses and frames, direct	stiffness method for the analysis of trusses.	
Unit II	Introduction to Finite Element Analysis	7
General description of fir	nite element method, Basic steps involved in FEM, difference between	FEM and
	Discretization of structures – Finite elements used for one dimensional	
dimensional and three dir	mensional problems. Nodes, element aspect ratio, boundary conditions	numbering of
	properties of stiffness matrix.	Č
Unit III	Shape Functions	7
Coordinate systems natur	al and normalized, convergence criterion, compatibility requirements,	geometric
invariance shape function	ns – polynomial displacement functions for one, two and three dimension	onal elements.
Unit IV	Finite Element Formulation Using Energy Concepts	7
Energy concepts, theorem	n of minimum potential energy, principle of virtual work, R-R Method	
Unit-V	Finite Element Analysis of Structural Elements Using Direct	7
	Method.	
Finite Element Method for	or the analysis of simply supported beams and trusses.

SEMESTER 2

CE4201	Title: Advanced Design of Steel Structures	L T P C 3 2 0 4
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To provide necessary tool for designing steel structures using IS Codes	
Expected Outcome	After the course students will be able to design industrial buildings and t line towers with proper connections	ransmission
Unit No.	Unit Title	No. of
		hours (per Unit)
Unit I	Introduction	8
	xial bending - Built-up Purlins - Various types and design - Design of Warious support conditions-Design of foundations-with lateral forces	nd girders-
Unit II	Connections	7
Bearing type joints - ur Bolted and welded-sem	nstiffened and stiffened seat connections - moment resisting connection of	f brackets-
Unit III	Towers	7
	urations - free standing and guyed towers - loads on towers - wind loads -	
	sign criteria for different configurations and transmission line towers	
Unit IV	Industrial Buildings	7
	aced and unbraced - Gable frames with gantry-Rigid industrial frames-Fir	e resistant
Unit V	Plastic Analysis	7
	ing - Plastic hinge concept - Mechanism method - Application to continuo	
	ic moment distribution - Analysis of Gable frames - instantaneous centre

		3 0 0 3						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	To understand the principal of Plate and Shell design theory.							
Expected Outcome	After the course students will get sufficient knowledge needed to design and shells.	gn Plates						
Unit No.	Unit Title	No. of						
		hours (per						
		Unit)						
Unit I	Introduction to Plate Theory	8						
Thin and Thick Plates, Sr	nall and Large Deflection Theory of Thin Plate, Assumptions in Analy	sis of Thin						
Plates, Slope Curvature R	telations, Moment - Curvature Relations, Stress Resultants, Governing	Differential						
Equations for Bending of	Plates, Various Boundary Conditions.							
Unit II	Navier's and Levy's Solution	7						
Rectangular Plates Subject	eted to Uniformly Distributed Load, Sinusoidal Load for Different Bou	ndary						
Conditions.	,	2						
Unit III	Circular Plates	7						
Analysis of Circular Plate	es under Axis-Symmetric Loading, Moment Curvature Relations, Gove	erning						
	Polar Co-Ordinates, Simply Supported and Fixed Edges, Distributed Lo							
Load, a Plate with Hole a	t Center.							
Unit IV	Introduction to Shell Structures	7						
	n basis of Geometry, Thin Shell Theory, Equation of Shell Surfaces,							
Stress Resultants, Stress I	Displacement Relations, Compatibility and Equilibrium Equations.							
Unit V	Membrane Analysis	7						
Equation of Equilibrium	for Synclastic Shells, Solution for Shells Subjected to Self-Weight an	d Live Load,						
Cylindrical Shells -Equa	tion of Equilibrium, Open Shells With Parabolic, Circular, Elliptic	al Directrix,						
Simple Problems, Shells	With Closed Directrix-Circular, Elliptical-Simple							
Problems, Problems on P	ipes Carrying Fluid/Liquid Under Pressure, Just Filled and Partly Fill-	ed						
Text Books	1. S P Timoshenko and S W Krieger, "Theory of Plates and Shells"	, Mc-Graw						
	Hill							
Reference Books	1. R Szilard,"Theory and Analysis of PlatesClassical and Numerica	ıl Methods"

CE4211	Title: Fire Resistance of Structures	LTPC
		3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	Interpret the intentions of code requirements for fire safety and	
	understand the concepts of fire severity and fire resistance	
Expected Outcome	Design steel, concrete or timber structures to resist fire exposure	
Unit No.	Unit Title	No. of
		hours (per
		Unit))
Unit I	Classification of Buildings and Types of Production Processes	8
Types of construction an	d classification of buildings, Main building elements, Requirements of b	ouildings,
Combustibility and fire r	esistance	
Unit II	Calculation of Required Fire Resistance Limit of Building	7
	Structures	
Initial condition for calcu	ulating fire resistance of structures, Duration of fire, Temperature of fire	, Main points
on the method of investig	gating temperature regimes of fires, Results of experimental investigatio	ns on
fires, Simulation of temp	erature regimes of fires, Determination of fire in residential and public b	ouildings,
Determination of fire dur	ration of fire in industrial buildings and warehouses	
Unit III	Methods of Testing Structures for Fire Resistance	7
Problems of testing for fi	re resistance, Set-up for testing fire resistance, Temperature regime of the	he tests, Test
pieces of structures, Con	ditions of loading and supporting of structures.	
Unit IV	Fire Resistance of Reinforced Concrete and Wooden Structures	7
Change in the strength or	f reinforcement steel with increase of temperature, Change in the streng	th of concrete
	rease in temperature, Coefficients of thermal expansion of reinforcen	
concrete, Axially loaded	columns, Statically determinate elements subjected to bending stresses,	
	stance for Wooden Structures.	
Unit V	Fire Resistance of Steel Columns	7
General, Cross sections of	of steel columns and other design data, Methods of protecting steel columns	nns from
	eel columns on heating, Heat insulating capacity of protection and fire re	
	rulation of fire resistance of steel columns,

CE4212	Title: Safety of Structures	LTPC
		30 03
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	Understand the concepts involved in structural safety. Analyze a structural its inherent safety level.	e and compute
Expected	Design a structure so as to comply with a target safety level.	
Outcome		
Unit No.	Unit Title	Lecture/week
Unit: I	Concepts of Structural Safety	6
	in design, Basic statistics- Graphical representation and data reduction	tion techniques-
	by polygon, Measures of central tendency- grouped and ungrouped da	
	of asymmetry. Curve Fitting and Correlation, Random events-Sample s	
events,	or asymmetry. Car to rianing and correlation, random events-bample s	pace and
Unit II	Basic Statistics and Probability Theory	6
	event space, Measures of probability-interpretation, probability axioms	_
	onditional probability, probability tree diagram, statistical independence,	total probability
	theorem., probability density function, Mathematical expectation.	na diatribution -
	ions, Discrete distributions- Binomial and poison distributions, Continuo	us distributions-
Normal, Log normal		
Unit III	Probability Distributions for Resistance And Loads	6
	es of concrete, steel, Statistics of strength of bricks and mortar, Selection	of probabilistic
	analysis of loads-dead loads, live loads, wind loads.	1
Unit IV	Reliability Analysis and Simulation Techniques	6
	ity-factor of safety, safety margin, reliability index, performance function	
	thods-First Order Second Moment Method (FOSM), Point Estimate Met	
Advanced First Orde	r Second Moment Method (HasoferLind's method). Simulation Techniqu	es: Monte
	atistical experiments, sample size and accuracy, Generation of random n	umbers- random
numbers with standar	rd uniform distribution, continuous random variables.	
Unit V	Reliability Based Design	6
	tial safety factors, safety checking formats – LRFD format, CEB format, gn, IS Code provisions	processes in

CE4213	Title: Soil Structure Interaction	LTPC
02.1210	Son but details interded on	3 0 0 3
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To give clear concepts of soil-foundation-structure interaction	
Objectives	especially for finite beams/ plates placed on elastic foundation.	
Expected	places placed on clastic foundation.	
Outcome	Understand behavior of soil when interact with different structures	
Unit No.	Unit Title	Lecture/week
Unit: I	Soil- Foundation-Structure Interaction	6
	ecture interaction, Soil-fluid-structure interaction, Idealization of soil by	linear and non-
	kler model, Elastic continuum model (isotropic and anisotropic), Two p	
	el, Pasternak model, Reissner model.	
	terpretation of parameters encountered in various idealized soil models	, two parameter
elastic and Elastic co		
	Finite Beams on Elastic Foundations	6
	kler models, finite beams on two parameter elastic model, finite beams of	n homogenous
	nite difference solution to problems of beam on linear and non-linear Wir	
	Plates on Elastic Foundations	6
Rectangular and cont	inuous plates on elastic foundations, plates carrying rows of equidistant	columns,
	lar plates on Winkler medium, Two parameter elastic medium and no ela	
finite difference solut	tion of problems of rectangular plates on linear and non-linear elastic fou	ndation.
Unit IV	Oil Structure Interaction In Framed Structures	6
Structures with isolat	ted foundation, spring analog approach, determinations of spring paramet	ers, structures
with continuous bean	ns and rafts as foundation, finite element modeling, sub-structure techniq	ue of analysis,
concept of relative st	iffness, Interactive behavior of some framed structure.	
Unit V	Soil Pile Interaction	6
Laterally loaded sing	le piles-Concept of coefficient of horizontal sub grade reaction, finite dif	ference and
finite element solutio	n, soil-structure interaction of framed structures with pile foundation, Int	eraction of other
structures with soil fo	oundation system, Tanks with annular ring foundations, chimneys, silos,	cooling towers,
underground subway	s and tunnels.

CE4215	Title: Wind effect on structures	LTPC
		3 0 0 3
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To evaluate the wind forces for various structures using relevant	nt Indian
	standards and to design structures for wind resistance.	
Unit No.	Unit Title	No. of
		hours
		(per Unit)
Unit: I	Introduction	8
Nature of windstorn	n, Design wind speed, Atmospheric boundary coyer and Wind tur	bulence
Unit II	Basic Bluff body aerodynamics	7
Flow around bluff b	odies, Pressure & force coefficients flow around flat plates, Walls	s, Prismatic
shapes.		
Unit III	Wind effects on Low and Tall Buildings	7
Low buildings with	different roof shapes and multi-span buildings, Along wind effect	ts, Across wind
effects and vortex sh	nedding.	
Unit IV	Wind effects on Bridges	7
	ents for bridges, Nature of dynamic response of long span bridges	, Flutter
	g of long span bridges. Cable suspended structures.	
Unit V	Role of Wind Tunnel	7
Flow simulation, Mo	odeling, Flow measurement, Pressure measurement, Deformation

CE4340	Title: Foundation and Steel Design Lab	LTPC						
		0 0 2 1						
Version No.	1.0							
Course	Nil							
Prerequisites								
Objectives	To give software base knowledge on structure design							
Expected	Student will know how to complete object-oriented intuitive 2D/3D graphic							
Outcome	model generation							
	List of Experiments							

- 1. ISM Export. Anchor Bolt Library. Isolated Footing Enhanced Drawing.
- 2. Concrete Check Options. Bearing Capacity Type. Compression Development Length for Isolated Footing
- 3. Top Reinforcement Load Factors. Negative Load Combination Factors.
- 4. Soil Bearing and Self Weight Factors for Plant Mode. Sliding Check for Octagonal Footings.
- 5. Node to Node Dimensions. Multiple Load Case Selection. Pedestal Reinforcement Input.
- 6. Updates to Detailed Output Spreadsheet. Shear Design for Pedestals.
- 7. Isolated Footing Error Reporting.
- 8. Design for raft foundation(live example)

Prerequisites		
Objectives	To learn to prepare reports and charts	
Expected Outcome	On successful completion of this course the student will have kno prepare reports	wledge to analyses and

List of Experiments

- Basics of Excel- data entry, editing and saving, establishing and copying formula.
- Functions in excel, copy and paste and exporting to MS word document
- 2. 3. 4. Graphical presentation of data -Histogram, frequency polygon, pie-charts and bar diagrams.
- SPSS, opening SPSS, layout, menu and icons analyzing the data using different statistical techniques.

	Title: Advanced Foundation Engineering	LTPC
		3 0 0 3
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To give knowledge needed for design of retaining walls and different types	of foundations
	like shallow, pile, well and machine foundations	
Expected	After this course, students will be able to design retaining walls, design of	Various types
Outcome	of foundations like shallow, pile, well and machine foundations	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit: I	Soil Mechanics Principles and Soil Exploration	6
Role of civil engine	eer in the selection, design and construction of sub structure elements, brief	ef review of soil
mechanics principles	s used in foundation engineering	
Soil Exploration: Me	ethods of soil exploration; boring, sampling, penetration tests, correlations between	ween penetration
resistance and soil d	esign parameters, Proportioning of Foundation.	
Unit II	Earth Pressure and Retaining Walls	6
Earth pressure at re-	st, active and passive earth pressure, Rankine earth pressure theories, earth	pressure due to
surcharge, retaining	walls, stability analysis of retaining walls, proportioning and design of retaining	ing walls.
Unit III	Foundations	6
	s, mechanism of load transfer in shallow and deep foundations, shallow founda	tions, Terzaghi's
	ory, computation of bearing capacity in soils, effect of various factors, and use	
	foundations, Construction on weak soils.	
Unit IV	Deep Foundation	6
	pes and method of construction, estimation of pile capacity, capacity and set	tlement of group
of piles, proportioning		2
	Methods of construction tilt and shift, remedial measures, bearing capacity	settlement and
lateral stability of we		, sectionient una
Unit V	Machine Foundations	6
	oundations, mathematical models, response of foundation – soil system to ma	
	block resonance test, criteria for design.	ciiiii cheitation,

CE4305	Title: Computer Application in Design	LTPC
		3 0 0 3
Version No.	1.0	
Course	Nil	
Prerequisites		
Objectives	To familiarize the basics of CAD	
Expected Outcome	Various aspects of data storage, manipulation and expanding its capability	
Unit No.	Unit Title	No. of hours (per Unit)
Unit: I	Introduction	6
The Design process a	and role of CAD - Types and applications of design models -Computer 1	representation of
modelling.	mensional modelling schemes – Wire frame and surface representation	scheme – solid
Unit II	Introduction to Cad Software	6
Writing interactive pr solid-modeling packa	rograms to solve design problems using C++ - systems customization - Feages. for Shear Wall	atures of various
Unit III	Computer Aided Design	6
Development of progr	rams in C++ design, drawing and plotting of crane and girder	
Unit IV	Entity Manipulation and Data Storage	6
	model - Model storage - Data structures - Data base considerations -	object oriented
representations - Orga	anizing data for CIM applications – Design information systems.	
Unit V	Expanding the Capability of CAD	6
Parametric and variati – Rapid prototyping –	ion modeling – Feature based modeling – Feature recognition - Design by feature all in Design.	atures – Analysis
Text Books	1. Ibrahim Zeid "CAD/ CAM - Theory and Practice" - McGraw Hil Edition,	
Reference Books	1. Chris McMahon and Jimmi Browne, "CAD CAM Principles, prac Manufacturing Management", Pearson Education Asia,	ctice and

CE4306	Title: Advanced Concrete Technology	LTPC					
	8	3 0 0 3					
Version No.	1.0						
Course	Nil						
Prerequisites							
Objectives	To study the properties of concrete making materials, tests, mix design, sp	pecial concretes					
	and various methods for making concrete						
Expected Outcome	This course will provide good knowledge about concrete constituents,	testing of					
	Concrete, concreting methods and various types of concrete						
Unit No.	Unit Title	No. of hours (per Unit)					
Unit: I	Concrete Making Materials	6					
Aggregates classifica	tion, IS Specifications, Properties, Grading, Methods of combining aggrega	tes, specified					
grading, Testing of ag	ggregates. Cement, Grade of cement, Chemical Composition, Testing of cor	icrete,					
Hydration of cement,	Structure of hydrated cement, special cements. Water Chemical admixtures	s, Mineral					
admixtures							
Unit II							
Compression test, fle	xure test, Non-destructive test, fire resistant test, sound insulation test						
Unit III	Jnit III Mix Design						
Properties of fresh co	ncrete, Hardened concrete, Strength, Elastic properties, Creep and shrinkage	e – Durability					
of concrete							
Unit IV	Special Concrete	6					
	te, Fly ash concrete, Fiber reinforced concrete, Sulphur impregnated con						
	rmance concrete. High performance fiber reinforced concrete, Self-Compa	acting-Concrete,					
	te, Waste material based concrete – Ready mix concrete						
Unit V	Concreting Methods	6					
	ring of concrete, methods of transportation, placing and curing. Extreme we	eather					
concreting, special co	oncreting methods. Vacuum dewatering – Underwater Concrete.						
Text Books	1. Gambhir. M.L.," Concrete Technology", McGraw Hill Education,						
TONG BOOKS	2. Gupta.B.L., Amit Gupta, "Concrete Technology", Jain Book Agency,						
	3. Neville, A.M., "Properties of Concrete", Prentice Hall, London.						
Reference Books	1. Santhakumar.A.R.;"Concrete Technology",Oxford University Press,						
	2. Shetty M.S., "Concrete Technology", S. Chand and Company Ltd. Dell	ni,

CE4307	Title: Plastic Analysis	LTPC						
		3 0 0 3						
Version No.	1.0							
Course	Nil							
Prerequisites								
Objectives	To give general exposure about plastic behavior.							
	Limit analysis theorems, Analysis and design of beams and frames.							
Expected Outcome	This course will provide good background for plastic analysis of structures	s. Design of						
	Concrete Structures with minimum reinforcement.	T						
Unit No.	Unit Title	Lecture/week						
Unit: I	Introduction	6						
Analysis of Structures for Ultimate Load: Fundamental Principles – statically method of Analysis – Mechanism method of analysis – Method of analysis, Moment check – Carry over factor – Moment Balancing Method.								
Unit II	Design of Continuous Beams	6						
Design of Continuous Beams: Continuous Beams of uniform section throughout – Continuous Beams with								
different cross-sections.								
Unit III	Secondary Design Problems	6						
Influence of Axial force on the plastic moment – influence of shear force – local buckling of flanges and webs –								
lateral buckling – colu	mn stability.							
Unit IV	Design Of Connections	6						
Requirement for conr	nections – straight corner connections – Haunched connection – Interio	r Beam-Column						
connections	-							
Unit V	Design Of Steel Frames	6						
Sinole span frames – s	implified procedures for Sinole span frames – Design of Gable frames with	Haunched						
	Deflections: Introduction – Deflection at ultimate load – Deflection at worki							
	and Sinole span frames.	-

CE4314	Title: Statistical methods and algorithm	LTPC							
		3 0 0 3							
Version No.	1.0								
Course	Nil								
Prerequisites									
Objectives	Understand the principles and necessity of statistical methods and	algorithms.							
Unit No.	Unit Title	No. of							
		hours							
		(per Unit)							
Unit: I	Introduction	8							
	s of research, Study and formulation of research problem. Scope and								
	ation and presentation of research proposal using statistical package.								
Unit II	Review of Probability	7							
	ic approach of probability, Conditional probability, Bayes' rule, Con								
	ditional expectations. (CO1) Markov chains: Basics of Markov chai								
	hains, Transition and stationary Markov chains. Continuous time M								
	ime branching processes, Kolmogorov, Forward and backward equa	tions, Pure							
birth, Pure death, Birth and death process.									
Unit III Analysis of variance 7									
	on: ANOVA for fixed effect model, ANOVA for Random Effect Mo								
	ne observation per cell): ANOVA for fixed effect model, ANOVA f	or Random							
Effect Model.									
	Unit IV Design of Experiments and Multivariate Data Analysis 7								
	zed Design, Randomized Block Design, Latin Square Design, their								
	of estimates, Analysis of Covariance, Introduction, multivariate nor								
	ector, Variance-covariance matrix, Correlation matrix and their estir								
	pwise regression, Selection of best set of variables, Classification an								
	ms. Factor analysis and principal component analysis. Illustrative ex	amples and							
	lysis using statistical package.								
Unit V	Time Series and forecasting	7							
	series, Analysis of time series, Measurement of trend, Measurement								
	ent of cyclic variations, Auto Regression Analysis, Auto-correlation	, Kandom							
component in time se		O 11:11							
Text Books	Populis, A., Random Variables and Stochastic Processes, Tata Mc(2002)	Jraw Hill
