Quantum University, Roorkee

Study & Evaluation Scheme Study Summary

Name of the Faculty	Faculty of Mechanical Engineering
Name of the School	Quantum School of Technology
Name of the Department	Department of Mechanical Engineering
Program Name	Master of Technology in Thermal Engineering
Duration	2 Years
Medium	English

Evaluation Scheme

Type of Paners Internal End Samester Total (%)										
Type of Papers	Internal	End Semester	Total (%)							
	Evaluation	Evaluation (%)								
	(%)									
Theory	40	60	100							
Practical/ Dissertations/Project	40	60	100							
Report/ Viva-Voce										
Internal Evaluation Com	ponents (Theo	ry Papers)								
Sessional Examination I		50 Marks								
Sessional Examination II		50 Marks								
Assignment –I		25 Marks								
Assignment-II		25 Marks								
Attendance		50 Marks								
Internal Evaluation Comp	onents (Practi	cal Papers)								
Quiz One		25 Marks								
Quiz Two		25 Marks								
Quiz Three		25 Marks								
Lab Records/ Mini Project		75 Marks								
Attendance		50 Marks								
End Semester Evaluat	End Semester Evaluation (Practical Papers)									
ESE Quiz		30 Marks								
ESE Practical Examination		50 Marks								
Viva- Voce		20 Marks								

Structure of Question Paper (ESE Theory Paper)

The question paper will consist of 5 questions, one from each unit. Student has to Attempt all questions. All questions carry 20 marks each. Question Q1 to Q5 will be compulsory and each question will have 3 parts. Each part carries 10 marks each and the student may attempt any 2 parts.

Important Note:

1. The purpose of examination should be to assess the Course Outcomes (CO) that will ultimately lead to attainment of Programme Specific Outcomes (PSOs). A question paper

must assess the following aspects of learning: Remember, Understand, Apply, Analyze, Evaluate & Create (reference to Bloom's Taxonomy). The standard of question paper will be based on mapped BL level complexity of the unit of the syllabus, which is the basis of CO attainment model adopted in the university.

- 2. Case Study is essential in every question paper (wherever it is being taught as a part of pedagogy) for evaluating higher-order learning. Not all the courses might have case teaching method used as pedagogy.
- 3. There shall be continuous evaluation of the student and there will be a provision of real time reporting on QUMS. All the assignments will evaluated through module available on ERP for time and access management of the class.

Program Structure - Master of Technology in Thermal Engineering

Introduction

Master of Technology in Thermal Engineering is a course involving studies on an advanced level of concepts of energy efficiency, renewable energy & environmental preservation, and their entwinement with classical energy technologies and recently discovered technologies. The course covers real-time fluid flow and heat transfer applications in Thermal Energy Systems, Cryogenic Engineering, Refrigeration & Air Conditioning, and other fields. Thermal engineering is a branch of mechanical engineering that studies the regulation of heating and cooling processes in enclosed spaces. It ensures to provide students with an effective learning experience with thought-provoking teaching pedagogy. The curriculum is highly demanding and thoughtfully designed to incorporate all the latest development in the field. The curriculum of post graduate program in thermal engineering aims at creating the right mindset which ensures the creation of innovative, thoughtful, and socially aware engineers. It allows establishing a solid understanding of research to continue professional development in thermal engineering. It allows applying for specialist roles at a renowned manufacturing company. Student will develop the ability to use their math, science, engineering, and technology expertise. Understand, analyse, create, and solve issues related to the application of technology in a variety of industrial contexts in great detail. It also entails developing, choosing, and implementing relevant approaches, resources, modern engineering, and information technology tools to tackle complex engineering problems.

We believe in the practical nature of the domain and focus on learning by doing it practically. Students will gain an ability to specify, fabricate, test, operate, validate and complete documentation of thermomechanical systems or processes. Students will gain an ability to apply the acquired software's skills for simulation in the controlled environment and provide viable solutions.

Towards enhancing employability and entrepreneurial ability of the postgraduates the Quantum University increase the practical content in the courses wherever necessary. The total number of credits in 4 semesters programme will be around 66 for all the programmes.

In order to harness regional specialties and to meet region-specific needs the Quantum University modify the content of syllabus as per the regional demands.

Project

This course is spread across the semesters, from 3rd semester to fourth semester where student is required to do a project or field work or design/fabrication and test/simulate for a research problem.

B. Choice Based Credit System (CBCS)

Choice Based Credit System (CBCS) is a versatile and flexible option for each student to achieve his target number of credits as specified by the UGC and adopted by our university.

The following is the course module designed for the M. Tech (Thermal Engineering) program:

Core competency: Students will acquire core competency in Thermal aspects of Mechanical Engineering and in its application areas.

Program/Discipline Specific Elective Course (DSEC):

Skilled communicator: The course curriculum incorporates basics and advanced training in order to make a graduate student capable of expressing the subject through technical writing as well as through oral presentation.

Critical thinker and problem solver: The course curriculum also includes components that can be helpful to improve post graduate students to develop critical thinking ability by way of solving problems/numerical using basic & advance knowledge and concepts of Thermal Engineering.

Sense of inquiry: It is expected that the course curriculum will develop an inquisitive characteristic among the students through appropriate questions, planning and reporting experimental investigation.

Skilled project manager: The course curriculum has been designed in such a manner as to enabling a postgraduate student to become a skilled project manager by acquiring knowledge about mathematical project management, writing, planning, study of ethical standards and rules and regulations pertaining to scientific project operation.

Ethical awareness/reasoning: A postgraduate student requires understanding and developing ethical awareness/reasoning which the course curriculums adequately provide.

Lifelong learner: The course curriculum is designed to inculcate a habit of learning continuously through use of advanced ICT technique and other available techniques/books/journals for personal academic growth as well as for increasing employability opportunity.

C. Program Outcomes of M.Tech Thermal Engineering.

Program Outcome (POs) - M. Tech

PO-01	Engineering knowledge	Exhibit in-depth knowledge in engineering specialization.
PO-02	Problem analysis	Think critically and analyze complex engineering problems to make creative advances in theory and practice.
PO-03	Design/Developm ent Of Solutions	An ability to design solutions for engineering problems and to design a component, system, or process that meet the specified needs with appropriate consideration for the public health and safety, along with the cultural, societal, and environmental considerations.
PO-04	Conduct Investigations of Complex Problems	Use research methodologies, techniques and tools, and will contribute to the development of technological knowledge
PO-05	Modern tool usage	Apply appropriate techniques, modern engineering tools to perform modeling of complex engineering problems with knowing the limitations.
PO-06	The Engineer and society	Achieve professional success with an understanding and appreciation of ethical behaviour, social responsibility, and diversity, both as individuals

		and in team environments.
PO-07	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge for sustainable development to articulate a comprehensive world view that integrates diverse approaches to sustainability
PO-08	Communication	Communicate complex engineering problems with the engineering community and society, write and present technical reports effectively
PO-09	Ethics	Exhibit professional and intellectual integrity, ethics of research and scholarship and will realize the responsibility towards the community
PO-10	Individual and Team work	An ability to analyse the local and global impact of computing on individuals, organizations, and society.
PO-11	Project Management and Finance	Demonstrate knowledge and understanding of engineering and management principles and apply the same with due consideration to economical and financial factors.
PO-12	Life-long learning	Engage in life-long learning with a high level of enthusiasm and commitment to improve knowledge and competence continuously

Program Specific Outcomes (PSOs)

At the end of this programme, Post Graduates will be able to:

- **PSO 1:** Analyse the complex engineering problems by applying engineering knowledge in the area of thermal engineering systems.
- **PSO 2:** Provide engineering solutions to meet the specified needs with appropriate consideration for comfort, safety, social and environmental aspects.

Program Educational Objectives(PEOs)

In their careers, our post graduates will be able to:

- **PEO 1**: Analyze and solve thermal engineering problems using modern engineering tools in industry or in research.
- **PEO 2**: Play key role in collaborative multidisciplinary scientific research with due consideration to economical and financial factors for leading a successful career in industry or to pursue higher education or being an entrepreneur.
- **PEO 3**: Engage in life-long learning with professional code of conduct.

D. Pedagogy & Unique practices adopted:

""Pedagogy is the method and practice of teaching, especially for teaching an academic subject or theoretical concept". In addition to conventional time-tested lecture method, the institute will emphasize on experiential learning:

Mini projects: students are asked to do or given mini projects for developing an aptitude to critically think and find

solutions for real world problems, learn working with other people, under deadlines and guidance.

Flip Presentations: Students are required to present on latest technology trends in mechanical engineering to enhance their ability to self learn and presentation skill along with developing their confidence level to face an audience.

Field/Live Projects: The students, who take up experiential projects in companies, where senior executives with a stake in teaching guide them, drive the learning. All students are encouraged to do some live project other their regular classes.

MOOCs: Students may earn credits by passing MOOCs as decided by the college. Graduate level programs may award Honors degree provided students earn pre-requisite credits through MOOCs. University allows students to undertake additional subjects/course(s) (In-house offered by the university through collaborative efforts or courses in the open domain by various internationally recognized universities) and to earn additional credits on successful completion of the same. Each course will be approved in advance by the University following the standard procedure of approval and will be granted credits as per the approval. Keeping this in mind, University proposed and allowed a maximum of two credits to be allocated for each MOOC courses. In the pilot phase it is proposed that a student undertaking and successfully completing a MOOC course through only NPTEL could be given 2 credits for each MOOC course.

For smooth functioning and monitoring of the scheme the following shall be the guidelines for MOOC courses, Add-on courses carried out by the College from time to time.

- a) It will necessary for every student to take at least one MOOC Course throughout the programme.
- b) There shall be a MOOC co-ordination committee in the College with a faculty at the level of Professor heading the committee and all Heads of the Department being members of the Committee.
- c) The Committee will list out courses to be offered during the semester, which could be requested by the department or the students and after deliberating on all courses finalize a list of courses to be offered with 2 credits defined for each course and the mode of credit consideration of the student. The complete process shall be obtained by the College before end of June and end of December for Odd and Even semester respectively of the year in which the course is being offered. In case of MOOC course, the approval will be valid only for the semester on offer.
- d) Students will register for the course and the details of the students enrolling under the course along with the approval of the Vice Chancellor will be forwarded to the Examination department within fifteen days of start of the semester by the Coordinator MOOC through the Principal of the College.
- e) After completion of MOOC course, Student will submit the photo copy of Completion certificate of MOOC Course to the Examination cell as proof.
- f) marks will be considered which is mentioned on Completion certificate of MOOC Course.
- g) College will consider the credits only in case a student fails to secure minimum required credits then the additional subject(s) shall be counted for calculating the minimum credits required for the award of degree.

Special Guest Lectures (SGL) & Extra Mural Lectures (EML): Some topics/concepts need extra attention and efforts as they either may be high in difficulty level or requires experts from specific industry/domain to make things/concepts clear for a better understanding from the perspective of the industry. Hence, to cater to the present needs of industry we organize such lectures, as part of lecture-series and invite prominent personalities from academia and industry from time to time to deliver their vital inputs and insights.

Student Development Programs (SDP): Harnessing and developing the right talent for the right industry an overall development of a student is required. Apart from the curriculum teaching various student development programs (training programs) relating to soft skills, interview skills, research tools etc. that may be required as per the need of the student and industry trends, are conducted across the whole program. Participation in such programs is solicited through volunteering and consensus.

Industry Focused programmes: Establishing collaborations with various industry partners to deliver the programme on sharing basis. The specific courses are to be delivered by industry experts to provide practice-based

insight to the students.

Special assistance program for slow learners & fast learners: write the note how would you identify slow learners, develop the mechanism to correcting knowledge gap. Terms of advance topics what learning challenging it will be provided to the fast learners.

Induction program: Every year 3 weeks induction program is organized for 1st year students and senior students to make them familiarize with the entire academic environment of university including Curriculum, Classrooms, Labs, Faculty/ Staff members, Academic calendar and various activities.

Mentoring scheme: There is Mentor-Mentee system. One mentor lecture is provided per week in a class. Students can discuss their problems with mentor who is necessarily a teaching faculty. In this way, student's problems or issues can be identified and resolved.

Extra-curricular Activities: organizing & participation in extracurricular activities will be optional for postgraduate students to develop confidence & face audience boldly. It shapes out their leadership qualities along with planning & organizing skills. Students can undertake various cultural, sports and other competitive activities within and outside then campus. This helps them build their wholesome personality.

Career & Personal Counseling: - Identifies the problem of student as early as possible and gives time to discuss their problems individually as well as with the parents. Counseling enables the students to focus on behavior and feelings with a goal to facilitate positive change. Its major role lies in giving: Advice, Help, Support, Tips, Assistance, and Guidance.

Participation in Flip Classes, Project based Learning(A2 Assignment), Workshops, Seminars & writing & Presenting Papers: Departments plan to organize the Flip Classes, Project based Learning(A2 Assignment), workshops, Seminars & Guest lecturers time to time on their respective topics as per academic calendar. Students must have to attend these programs. This participation would be count in the marks of general Discipline & General Proficiency which is the part of course scheme as non-credit course.

Formation of Student Clubs, Membership & Organizing & Participating events: Every department has the departmental clubs with the specific club's name. The entire student's activity would be performed by the club. One faculty would be the coordinator of the student clubs & students would be the members with different responsibility.

Capability Enhancement & Development Schemes: The Institute has these schemes to enhance the capability and holistic development of the students. Following measures/ initiatives are taken up from time to time for the same: Career Counseling, Soft skill development, Remedial Coaching, Bridge Course, Language Lab, Yoga and Meditation, Personal Counseling

Library Visit & Utilization of QLRC: Students may visit the library from morning 10 AM to evening 8 PM. Library created its resources Database and provided Online Public Access Catalogue (OPAC) through which users can be accessed from any of the computer connected in the LAN can know the status of the book. Now we are in process to move from OPAC to KOHA.

ME4103	Title: Advanced Heat Transfer	LTPC
		3 1 0 4
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To develop the ability to use the heat transfer concepts for thermal analysis	
	heat exchangers and to achieve an understanding of the basic concepts of	of phase change
	processes.	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Introduction	7
	t Modes of heat transfer-Conduction-General heat conduction equation, E	
	fer in Cartesian coordinates, Finned surfaces-1-D Heat transfer with inter	nal heat generation.
Unit II	Transient heat conduction	8
	eisler charts, Semi-infinite solid, Product solution- 2D, steady state heat	
	ansient heat conduction, Analytical solution-Finite Difference methods f	or Heat Conduction
	ady state and Unsteady heat conduction, Implicit and Explicit methods.	
Unit III	Convection	8
	Hydrodynamic and Thermal boundary layer concepts-Equations of Motic	
	ransfer coefficient- Dimensional Analysis, Importance of Non, Dimensio	
	Momentum Transfer-External flows and integral methods for flow over	a flat plate-
Application of empirical rela		
	f Free convection-An Approximate Analysis of Laminar Free Convection	on Vertical Plate-
	ntal Plate, Cylinder and Sphere- Combined free and forced convection.	
Unit IV	Boiling and condensation	5
	Nusselt's theory of film condensation on a vertical plate, Assumptions and	correlations of film
condensation for different ge		
Unit V	Radiation	8
	ethods of Determining View factors-Radiant heat exchange in Grey, Nor	n- Grey bodies with
	Absorbing media- Secular surface, gas radiation, Radiation from flames	\

M. Tech. TE V 2022 **Course Outcome For ME4103**

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to Understand the modes of heat transfer and its governing laws and also acquire skills to calculate heat transfer in steady state conditions in one dimension	3	Em
CO2	Students should be able to understand and calculate the 1D and 2D heat transfer in transient conditions and also able to solve problems using finite difference technique.	3	S
CO3	Students should be able to analyse convective heat transfer in different geometries and should know the use of emperical relations	3	S
CO4	Students should able to analyse different phase change heat transfer.	3	S
CO5	Students should be able to evaluate heat transfer by radiation from different complex geometries.	4	S

ME 4140	Title: Advanced Thermal Engineering Lab	L T P C 0 0 2 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives	The lab is mainly intended to conduct experiments on various Thermal Engineering devices to study the performance and its applications.						
	T 1 4 8 T						

List of Experiments

- Study Compressibility factor measurement of different real gases.
- 2. To calculate Dryness fraction estimation of steam.
- 3. Performance analysis of two stage reciprocating compressor.
- Performance test and analysis of exhaust gases of an I.C. Engine.
- Heat Balance sheet, Volumetric Efficiency and air fuel ratio estimation of an I.C. Engine.
- 4. 5. 6. 7. 8. Performance analysis of Air conditioning unit.
- Performance analysis of heat pipe. Study of solar flat plate collector.

Mode of Evaluation	Internal and External Examinations

ME4240	Title: Simulation Lab L T P C						
		0 0 2 1					
Version No.	1.0						
Course Prerequisites	Nil						
Objectives To learn the modeling and simulation analysis of various thermal engineering application using analysis software.							
List of Experiments							

- Study of Simulation software.
- Analysis of Discharge of Water from a Reservoir.
- Simulation of 2-D steady state heat conduction in a slab. 3.
- 4. Simulation of counter flow heat exchanger.
- 5. Analysis of Transient Temperature Distribution in a Slab.
- Analysis of Temperature Distribution on an Insulated Wall. 6.
- 7. Analysis of auto pilot system.
- 8. Analysis of servomotor system.

ME4202	Title: Cryogenic Engineering	LTPC
		3 0 0 3
Version No.	1.1	
Course Prerequisites	Nil	
Objectives	To build a foundation in the fundamentals of cryogenics and to encou	rage a hands on
	approach to solving cryogenic problems	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Introduction to cryogenic engineering	7
	erties of Cryogenic fluids, Material properties at Cryogenic Temperatur	es. Applications of
	ace, Medicine, Gas industry, High energy physics, Superconductivity	
Unit II	Liquefaction Cycle	8
	F.O.M. and Yield of Liquefaction Cycles. Inversion Curve- Joule Thor	
	d Linde Hampson Cycle, Claude Cycle Dual Pressure Cycle, Or	tho-Para hydrogen
	nents in Liquefaction Systems	<u> </u>
Unit III	Separation of Cryogenic Gases	7
	H-C Diagrams, Principle of Rectification, Rectification Column	, Analysis-McCabe
Thiele Method, Adsorption		
Unit IV	Cryogenic refrigerants	7
Joule-Thomson (J.T.) Cryoc Refrigerators Regenerators 1	coolers, Stirling Cycle Refrigerators, Gifford-McMahon (G.M.) Cryoco used in Cryogenic Refrigerators. Magnetic Refrigerators	olers, Pulse Tube
Unit V	Handling of cryogens	7
	Cryogenic Transfer Lines, Insulations in Cryogenic Systems, Ope	
	Pumps, Instruments to measure Flow, Level and Temperature operating	principles.
Text Books	1. Randall F. Barron, Cryogenic Systems, McGraw-Hill	
	2. Klaus D. Timmerhaus and Thomas M. Flynn, Cryogenic Process En	gineering, Plenum
D.C. D.I	Press New York	
Reference Books	1. Robert W. Vance, Cryogenic Technology, John wiley and So	ons
	2. Manata Multhanadhay Eundamantala of Cryagania Enginagring E	III I comina
	 Mamata Mukhopadhay, Fundamentals of Cryogenic Engineering, F R.B. Scott, Cryogenic Engineering, Van Nostrand and Co. 	rni Leanning
Mode of Evaluation	Internal and External Examinations	
Recommendation by	06.06.2019

ME4213	Numerical Solution of Partial Differential Equations	LTPC
	•	2 1 0 3
Version No.	1.0	
Course Prerequisites	NIL	
Objectives	To provide the concepts of various classical and modern methods of	
	for solving the partial difference equation with numerical techniques.	
Expected Outcome	Students will be able to solve partial differential problems, understand	
	and apply the concept of differential equation in various mechanical engineering problems.	
Unit No.	Unit Title	No. of hours
		(per Unit)
Unit I	Partial Difference Equation and Finite difference method	4
	erential equation, Introduction to Finite Difference Methods, Finite Dif	ference scheme for
one dimensional PDE		
Unit II	Parabolic Equation	8
	quations, difference formulae, explicit and implicit difference methods	
	colson Method, Dufort-Frankel Method. Tridiagonal systems, converge	
	ensional parabolic equations: Alternating Direction Implicit (Peaceman-	-Rechford) method,
	ons. Simple non-linear initial boundary value-problem.	_
Unit III	Hyperbolic Equation	6
	ons, explicit and implicit difference method, Difference methods in seco	nd order hyperbolic
	ce dimensions, its stability. Lax-wendrof scheme.	(
Unit IV	Elliptical Equation	6
	nations; Dirichlet's, Neumann and mixed boundary problems. Equation in	n polar co-ordinates
(Simple problems), Quasi ell		4
Unit V	Finite element method	4
	t method and Multigrid method for simple problems, Weighted Residua	i methods,Golerkin
Text Books	Galerkin Method/with triangular elements 1. Computational Methods for Partial Differential Equation, M.	K Jain S.R.K
TEAL DUONS	Iyengar & R.K. Jain, Wiley Eastern Ltd.	IX. Jaill, S.K.K.

ME4310	Title: Modelling of IC Engine	L T P C 3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To learn thermodynamics of combustion, characteristics, principles g IC engine.	
Expected Outcome	 Students will demonstrate a basic understanding of several t that will include zero dimensional thermodynamic model, one di dimensional, single zone, two zone etc models. Students will develop models and simulate them for diesel gas engine. Students will demonstrate the performance evaluation and a such modeled engines 	mensional and multi- engine petrol engine, emission standards for
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Fundamentals	7
model building and integrecirculation, valve lift cur		eometry, exhaust gas
Unit II	Thermodynamic Combustion Models of CI Engines	8
Single zone models, premi transfer correlations, igniti	xed and diffusive combustion models, combustion heat release using wie on delay, internal energy estimations, two zone model, application of heat	ebe function, wall heat at release analysis.
Unit III	Reprocessing	8
	fuel characteristics - role of solvent extraction in reprocessing - solvent	extraction equipment.
Unit IV	Fuel spray behavior	7
	ure, fuel atomization, droplet turbulence interactions, droplet impingement pressure and pulse turbo charging, compressor and turbine maps, charging, chargin	
Unit V	Mathematical models of SI Engines	6

ME4305	Title: Energy Management in Thermal System	LTPC						
		3 0 0 3						
Version No.	1.0							
Course Prerequisites	Nil							
Objectives	To learn the instruments suitable for energy auditing and to study the various	s measures for						
	energy conservation and financial implications for various thermal utilities.							
Unit No. Unit Title No. of hou (per Unit)								
Unit I	Introduction	8						
potential in various Industries a and energy efficiency, needs Energy audit questionnaire,	dia. Energy Resources Availability in India. Energy consumption pattern. Energy and commercial establishments. Energy intensive industries, an overview. Energy and advantages. Energy auditing, types, methodologies, barriers. Role of energy Conservation Act 2003.	gy conservation						
Unit II	Instruments for Energy Auditing	8						
	sensitivity, readability, accuracy, precision, hystersis. Error and calibration.							
flow, velocity, pressure, temp quality.	erature, speed, Lux, power and humidity. Analysis of stack, water quality,	power and fuel						
Unit III	Thermal Utilities: Operation and Energy Conservation	6						
Boilers, Thermic Fluid Heaters	s, Furnaces, Waste Heat Recovery Systems, Thermal Storage.							
Unit IV	Thermal Energy Transmission	6						
Steam traps, refractories, optim	num insulation thickness, Insulation, piping design.							
Unit V	Financial Management	8						
	nd criteria, financial analysis techniques, break even analysis, simple pay bacue, internal rate of return, cash flows, DSCR, financing options, ESCO conceptions, ESCO conceptions, ESCO conceptions, experiments are considered as a conception of the conception of t							
Text Books	1. C.B. Smith, Energy Management Principles, Pergamon Press, NewYork,							
Reference Books	1. PR Trivedi, KR Jolka, Energy Management, Commonwealth Publication							
	2. Write, Larry C, Industrial Energy Management and Utilization, Hemisp	here Publishers,						
	Washington							
	3. Hamies, Energy Auditing and Conservation; Methods Measurements, N	Ianagement and						
	Case Study, Washington							
Mode of Evaluation	Internal and External Examinations							
Recommendation by Board	06.06.2019							
of Studies on								
Date of approval by the	13.07.2019							
Academic Council								

M. Tech. TE V 2022

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to the course is intended to introduce principles of energy auditing and to provide measures for energy conservation in thermal applications	2	S,Em
CO2	Students should be able to design suitable energy monitoring system to analyz and optimize the energy consumption in an organization.	3	S
CO3	Students should be able to improve the thermal efficieny by designing suitable systems for heat recovery and cogeneration.	3	S
CO4	Students should be able to guide the employees of the organization about the need and the methods of energy conservation.	2	S
CO5	Students will be able to carry out the cost- benefit analysis of various investment alternatives for meeting the energy needs of the organization.	3	S,Em

ME 4309	Title: Air-Conditioning System Design	L T P C 3 0 0 3
Version No.	1.0	
Course Prerequisites	Nil	
Objectives	To provide the concepts of thermal distribution technique through a air co and its various types and advantages	nditioning system
Unit No.	Unit Title	No. of hours (per Unit)
Unit I	Estimation of Solar Radiation	6
basic and derived angle ,angle	alculation – I: Introduction, solar radiation, constant and irradiation geometre of incident for horizontal, vertical and tilted surfaces, calculation of direct, ar radiation model including effect	
Unit II	Solar Radiation fenestration, ventilation and infiltration	8
	alculation – II: Fenestration, need, effect on air conditioning systems, estimaternal shading, calculation of shaded area, windows with overhang, infiltration	
Unit III	Heat Transfer through building, fabric heat gain/loss	8
in brief numerical methods us	s, non homogeneous walls, air spaces, composite walls, opaque walls, roofs sed to solve the 1-D transient heat transfer problem, semi-emperical methods time lag factor, typical tables of CLTD for walls and roofs.	
Unit IV	Selection Of Air Conditioning Systems	6
	oution systems, there functions, selection criteria and there classification of a dvantages, disadvantages and its application for various air/water flow syste	
Unit V	Transmission of Air in Air Conditioning Ducts	8
modified Bernoulli equation,	AHU) its functions, need for studying transmission, air flow through ducts static, dynamic, datum and total head, fan total pressure(FTP) and power in estimation of dynamic pressure drop in various types of heatings. 1. Stoecker W.F., Refrigeration and air conditioning, McGraw Hill 2. C.P. Arora, Refrigeration and air conditioning, Tata McGraw Hill.	
Reference Books	Ahmad ul Ameen ,Refrigeration and air conditioning, PHI publication. Shan K. Wang ,Handbook of air conditioning and Refrigeration,Tata M.	
Mode of Evaluation	Internal and External Examinations	
Recommendation by Board of Studies on	06.06.2019	
Date of approval by the Academic Council	13.07.2019	

M. Tech. TE V 2022
Course Outcome For ME4309

Unit-wise Course Outcome	Descriptions	BL Level	Employability (Em)/ Skill(S)/ Entrepreneurship (En)/ None (Use, for more than One)
CO1	Students should be able to estimate the solar radiation.	3	S
CO2	Students should be able to learn about the Solar Radiation fenestration, ventilation and infiltration.	2	S
CO3	Students should be able to learn about the Heat Transfer through building, fabric heat gain/loss.	3	S
CO4	Students should be able to sense about the Selection of Air Conditioning Systems	2	S
CO5	Students should be able to differentiate about the Transmission of Air in Air Conditioning Ducts	2	S,Em
